Sure you do. Plus, your "a-1" operation consists of telling somebody
to "go to hell" on the air, just because you disagree with them.

> Take a vote Roger and see who they want out of here.

the internet is not a DEMOCRACY, Dumbass Dan. You right-wingers THRIVE
on denying others their rights of free speech, but are quite vocal
about expressing theirs. Pretty soon, you'll be goosestepping up at the
so-called "liberty net."

> Shall I call you Al?

Al? Oh, you mean the guy who tried to LEGITIMATELY get voted into
office. Hell, FUCKHEAD, I could care less what you call me. Now, get
back to felching your dead mommy.

Mark,

If you'd bothered to check QRZ before making the statement that I'm too lazy to learn the code, you'd have noted that the date on my license is February 26, 1997, and that it's an Extra class license. The code testing requirement at that time was still 20 WPM, and I still think that code testing at any speed above 5 WPM is a worthless hazing ritual.

Yes, the use of morse code in the movie, in that given situation, was appropriate. However, a movie is not reality. In reality, the odds of such a situation happening are about the same as the odds of the San Diego Chargers making it to the Super Bowl this year.

Anyone who finds old Road Runner cartoons entertaining, especially the ones where Wile E. Coyote is always falling off of a cliff, will enjoy Vertical Limit.

Hello !

I want to run VHF/UHF on my motorcycle. I have an open bike and I think I will be going to the route of an HT mounted to the handlebar. What exactly does the Mil-Spec ratings on the Yaesu HT's tell me? Are they able to be used in the midst of a rainstorm or what? I saw the FT50 and then another that doesn't advertise Mil-Spec but cites some other spec about being able to drop 3 feet onto a cement floor...FT 23rMKII. These are just 2 I found, I am not dyed in the wool Yaesu - feel free to suggest better models!

Better ideas? Been there done/am doing that's? Caveats? Also, as far as a mic goes, I am interested in the Premere mic I saw, in AES, that picks up from the voice box for noise suppression. I am sure I'll need background suppression at 75mph sans windshield, hihi

Lastly, I am not hung up on the idea of HT only, if there is a regular dual band mobile that will withstand rain, wind, etc. I am MORE interested!!!!! My current VHF/UHF gear canna' take the strain, Jim!!!! (FT530 and FT5200)

I'm looking for software that contains a repeater directory that uses a map which can be linked to a GPS to show you which repeaters are available to you as you drive. Does such an animal exist? I thought I read something about this awhile back but I can't find anything doing some net searches.

It all gets back to the rules regulating Part 15 devices. If the licensed station is operating within legal guidelines, then the Part 15 device must tolerate, or perhaps more accurately, the owner of the Part 15 device must tolerate the nuisance. There was a research study some years ago which evaluated interference complaints, and a good many of them came from 4 watt CB stations who were operating cleanly and within legal guidelines. That didn't mean that something was wrong with the station--quite to the contrary. The Part 15 device was defective. Try to convince your neighbor of this though.

Diagram a cat whicker?

> And in 1919 the test speed was doubled to 10 wpm.

Ohmygawd! When morse was highly relevant it was doubled all the way to
10wpm which is where most people get stuck at when trying to get to
13wpm. Perhaps there was a valid reason for selecting 10wpm.

> > If it was good enough back then when morse was a valid

> less spectrum, that it was a done deal by 1924.

We need more done deals like that. It's much less traumatic than the
gradual "weaning" from code that is currently stressing the service.

Lets see, Gore and the demodummies demanded a recount and Bush won the recount, so they wanted another and Bush won that one too. So they demanded a hand recount of only counties that would favor Gore and still Bush was winning so they wanted recount again and change the rules to count dimple chads (no votes) to count for Gore and throw out the overseas ballots that would favor Bush. In other words, Gore wanted keep recounting and changing the rules in hopes that he could somehow come up with the votes he needed to steal the election Yep that was a "legitimate" try to get voted into office.

If you had not included your ham call I would swear by the language you use you were just a cber.

By the numbers:

1. Get for them, or have them get for themselves, the
Interference Handbook from the FCC Call Center (1-888-CALL-FCC)
which has a good explanation of overload and audio
rectification from the consumers' standpoint.

2. Tell them that you will be available to make a reasonable
number of on-the-air tests to help them see if whatever they
try is effective.

3. "Pull the plug" on contacts with them about this until they
ask for an on-the-air test.

4. Do not, under any circumstances, modify or add anything to
their Home Electronics/Entertainment Equipment, but cooperate
with their service tech (by explaining and educating, not doing
repair work) if s/he requests.

5. Do not go "off the air" unless you are NOT in compliance with
the FCC Regs for the service in which you are operating (Amateur,
CB, MURS. GMRS, etc).

That attitude is no doubt why the legislation was passed allowing local
authorities to enforce FCC regulations regarding unlicensed transmitters...

It is not the act of helping, but rather the manner in which you address
your neighbor's complaints that will determine if you give up your
protections or not. However, just blowing them off will surely motivate them
to escalate the matter to other authorities.

If the day comes that he can't spew forth his racial dribble, he will be out of business. He has no agenda or substance beyond playing the race card at every opportunity. However, the longer he keeps it up, the more apparent that becomes - even to the groups he claims to represent.

One of the talk show hosts said it pretty well today. The football game
was in the fourth overtime with Bush leading by one point. Gore had the
ball on the ten yard line. All he had to do was kick a field goal. He
instead chose to run the clock out with two illegal procedure plays.

>authorities to enforce FCC regulations regarding unlicensed transmitters...

The legislation was passed because the local authorities in
Beloit, Wisconsin did not like the FCC telling the consumer the
truth: that it was their cheap Home Electronic/Entertainment
Equipment that needed to be upgraded and protected fromoverload
and audio rectification.

They jumped to the conclusion that all would be right in God's
Heaven if they, the locals, could be the radio cops and REALLY
show them (the FCC). They had enough juice to convince Senator
Feingold (D-Wisc) to start the ball rolling on such usurpation
of FCC jurisdiction, and the powers that be inside and outside
of the FCC who could have stopped such hijacking on exclusive
Federal jurisdiction grounds stood around and did nothing.

The authority granted to local governments to pass and enforce
statutes and ordinances about CB radio by the Feingold Bill
says not one word about interference investigation or
resolution. All they are authorized to do (wrongly, in my
professional opinion) is to enforce FCC regulations dealing
with use of non-type-accepted equipment and overpower and
out-of-band operation (as if they know what they are doing, but
that's another matter).

The first local government who passes a statute or ordinance
which confers upon themselves any authority to investigate and
resolve interference complaints in any manner other than as
permitted above or by referring the complainant to the FCC is
setting themselves up for being on the receiving end of a
restraining order in Federal District Court, because the
Federal Courts of Appeal have held for many years that the FCC
has exclusive jurisdiction in matters of interference
resolution.

I'm just itching for that one....

>It is not the act of helping, but rather the manner in which you address
>your neighbor's complaints that will determine if you give up your
>protections or not.

The protection exists - and is enforceable - no matter what
your neighbor thinks about it.....

>However, just blowing them off will surely motivate them
>to escalate the matter to other authorities.

Let the good times roll, baybee....

The only "other authority" that has any jurisdiction is the
FCC and it will give them the same line as detailed above.

3062. Supreme Court - Mine is bigger than...

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-14 01:39:06 UTC
From: Dwight Stewart <stewartx@sccoast.net>
Message-ID: <3A3824B8.5395E3D6@sccoast.net>
Source record: 97879
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

The democrats, and the press, have been trying all day to twist the United States Supreme Court decision last night into nothing more than a biased political move by the republicans on that court.

To support this argument, the democrats claim it was a five to four decision, with only the five republicans on the court ruling against them. Of course, we all know that this was simply not the case. In fact, seven of the nine justices ruled that there were serious constitutional problems with the Florida recount.

The only five to four decision concerned the time needed to do a proper recount. That part of the ruling simply stated that there was not enough time left to do that recount properly, which very few people who have actually read the constitutional issues raised would disagree with.

Of course, democrats even complain about this, claiming that if the court had not stopped the recount on Saturday, they would have had time to finish the recount. Again, only those who choose to ignore the constitutional issues would support this argument, since the recount last Saturday was not in compliance with the constitutional issues raised (which means that the Saturday recount was not acceptable and would have to be done over again).

But, even if we accept the silly notion that the United States Supreme Court justices who ruled against the democrats were basing that decision solely on politics, it sounds to me like the democrats are angry because the biased United States Supreme Court trumped their biased Florida Supreme Count (which also ruled along strict Democrat party lines).

So, in the end, it comes down to this simple fact - if the Florida Supreme Court had not ruled along strict party lines in the first place, and in such an extreme manner, there would have been no reason for the United States Supreme Court to step into all this. So, if the democrats want to complain about political bias in the courts, I strongly suggest they take a good hard look at the democrats on the Florida Supreme Court before they start pointing fingers at the United States Supreme Court.

Since you're posting to an amateur NG, can you provide references to
court cases where such actions were taken against hams who had approached
their neighbors, willing to help reduce RFI?

Dave, if the second station's signal strength is such that it completely "captures" the station transmitting the tone, then the lack of tone will close the squelch and nothing will be received -- the receiver will be muted as if no tone were being sent.

Just curious -- what is "ISI" at Mount Wilson?

The legislation was passed because people are tired of interference caused by the illegal operations of cb operators running illegal power, illegal radios driving crappy designed amps splattering all over the radio spectrum. The cb community brought this legislation upon themselves by refusing to operate legally.

check with your lawyer first before you do anything! you are under NO OBLIGATION to do anything! FCC rule part 15 is clear look at part 15 the label on the device ..... MUST accept interference..... it's not your problem it is the owners!
you make it yours YOU WILL PAY $$$$ we know that people want to do the right thing and help; no one wants to be a thorn in someone's side but in this nation doing the right thing went out the door 25 years ago[good example; car accident ...you render assistance....person is "allegedly" hurt by your actions ..... you get sued because you are not trained .... your found negligent .... now your ruined! happens every day to good folks like you doing the right thing] your "loving" neighbors will gig you if you make the wrong move ....(just like the accident victim or the victims family) a word to the wise! stay with the law (FCC part 15) or PAY big $$$$$$$$BUCKS defending yourself!

I used the 2N2222 for both the SL100 and BC548. As soon as I powered
the circuit, the relay was powered on. Turning the potentiometer full
scale didn't turn off the relay either.

Now I remember why I don't build circuits.

Scott.

You may be right about people being "tired" of "interference",
but please see my extensive posts in rec.radio.amateur.policy
for the history and analysis of the Feingold Bill which is a
pure pizzin' contest between local jurisdiction and Federal
jurisdiction.

I stand on my statements about the causative factors of that
Bill, which I have been tracking and opposing on jurisdictional
grounds for several years. What professional background do you
bring to substantiate your claims?

It does look very good. I am interested myself, though as far as "dream machine" status the FT-817 receiver won't hold much of a candle to the Elecraft K2. It does have other advantages, though, and if I win the lottery, I'll own one of each. For now I'm building my K2 with great anticipation.

This is not true. All it means is that you are willing to help the neighbor fix the inadequate design of the consumer equipment that is receiving the interference. If your station is legal, and you end up in court, it had better be Federal Court and be the result of a federal summons.

In other words, local courts have no jurisdiction over legal stations.

Of course, you can be sued over just about everything. Whether the person filing the suit will have a chance depends on the suit. For interference problems from a legal station - the court would throw the case out.

Not true. There is not requirement to try to solve the interference
problem. But it is usually a good practice to try. Best is to get a
local Ham club involved - rather than trying to do it yourself.

Phil, you need to get off the power trip about your qualifications. First of all, they are not all that impressive. Second, since most people in these newsgroups seem to judge opinions on their own merit, not by the real or imagined qualifications of the person posting, I suspect that JR, or anyone else who post opinions in this newsgroup, has just as much credibility behind those opinions as you do.

That is especially true when you're flat wrong, which you are. As we've discussed before, the situation today in the Citizens Band is the direct result of many years of failed FCC enforcement.

Yes, like you so often point out, because of budget restraints, the FCC today does not have the money, resources, or personnel, to properly enforce the Citizens Band. But that excuse (yes, excuse) was not true in the 70's when this problem first started. Nor was it true in the early 80's when illegal operations in the citizens band was rare, and therefore more easily controllable.

But, the FCC sat on its butt all those years until the problem got completely out of control, and now you, and many at the FCC, want massive amounts of money to be given to the FCC so that it can attempt to get the problem under control.

Now, I realise that, since you once were employed at the FCC, you don't want to accept this description of the situation, but the facts

speak for themselves.

Which brings us to today, and this legislation. It is the feeling of many people, myself included, that it would be foolish to give more money to the FCC so they can attempt to do a job that they have already demonstrated they cannot do. Nor is there any mood in this country to see another greatly expanded enforcement agency in Washington.

Oh, I'm sure that you're still insisting that the 20, or so, enforcement agents at the FCC can handle the estimated 25 million CB'ers, so there is no need for extra personnel, but I think most people are smart enough to see right through that nonsense. To enforce the citizens band properly, the FCC would have to hire hundreds of new enforcement agents, which is simply not desirable in the current trend of government downsizing.

So, in the end, that leaves this legislation as the only possible solution to the problem. And no, it is not the perfect solution, but it is at least something that has a chance to resolve some of the local problems caused by illegal operators in the citizens band. Or, to put it another way, it obviously has more of a chance to work then the current FCC enforcement efforts.

But it can cost you dearly in lawyer's fees to prove that the court has no jurisdiction. Didn't that happen recently in Ark or Ala (Help me out here someone)? The ham was taken to a local court for interfering with his neighbor's electronics. As I recall the ham was finally exonerated, but not until after lots of grief for him...

>Of course, you can be sued over just about everything. Whether the person
>filing the suit will have a chance depends on the suit.

Especially if you make the neighbor hate you enough. Sometimes even worse things than lawsuits can happen if you make someone hate you enough... (Even in NGs, right Steve...)

>For interference problems from a legal station - the court would
>throw the case out.

Maybe not. Lots of bad court decisions have to be appealed. Lawyers love it. Bottom line: *if possible* complete cooperation with your neighbor is usually best...

There are several radios which claim to be water-resistant, Wally. But I doubt any would work properly in the conditions found when mounted openly on the handlebars of a motorcycle. If you've ridden in the rain before, you know that nothing (rain suits, fairings, etc) will stop that water from getting through.

Its no different for the radio - water will get through. Also, don't forget that the coax, and connectors, are not water-resistant, so is another source of water problems.

So, in the end, the only solution is to mount the radio inside a waterproof container. Now that can be the pocket of a fairing, inside a saddlebag, or inside a simple plastic food storage container (from experience, I can tell you that a plastic bag will not work). In other words, you'll have to figure out a way to keep the water away from the radio, it's connectors, and it's coax.

Hope that helps. Good luck and ride safe.

Now the conservatives can fill the FCC with people that will oppose the ARRL and work to improve amateur radio and license requirements. If the ARRL really cared about amateur radio they would have done so by sending monthly petitions to the FCC proposing ways to improve the service, but it can be clearly seen that the ARRL doesn't care. They want ham radio to be like CB and hams to be like CBer's... crude, stupid and waiting for their next free ham radio license handout.

Aaron,
There were two cases in Mississippi, don't know about
Arkansas, and at least two cases that I know of in Oklahoma.
One of the cases in Oklahoma did cost the ham a few bucks,
but there were extenuating cercumstances. The other case
that I'm aware of in Oklahoma, cost the ham involved about
$3.00 to make the response to charges 'look' good by putting
it in a folder. Also cost maybe 45 minutes, including waiting
till the case was heard. You don't need a lawyer.
(Been there, done that, cost me $3.00)

Right on the money. And, if anybody bothers to read the SCOTUS decision, they will see that the reason that there was no time left is because the Florida Supreme Court had set and confirmed the 12th as the drop-dead date when they granted the first time extension to Gore. This FL court ruling was referred to four times in the SCOTUS rulings.

Although 7 Supreme Justices found Constitutional violations with the FL Court's rulings, 2 of them felt that they could move the deadline again, and 5 did not agree because it would have been creating new rules, which is what caused Gore all of his problems in the first place.

If anybody is to blame for Gore running out of time, it is the Democratic FL Supreme Court - not SCOTUS.

What are your qualifications, Dwight? I mean, *besides* announcing the
passage of HR2346 with a big grin and wielding it like a club in every group
that could possibly be of interest to CBers... Like this little gem from
Dwight in RRC:

Message-ID: <3A27619E.22EAE3F6@sccoast.net>

I was just wondering something about HR-2346? Since this allows
local legislators to write laws based on FCC regulations, will that include
the forfeiture amounts spelled out in the FCC regulations? In other words,
are we talking about local courts handing out fines up to $20,000 for each
rule violation? If so, that will certainly encourage local law enforcement
officers to go after CB'ers with a vengeance (there are very few $20,000
speeding tickets).

I can see the glee on your face as you wrote that...

> people in these newsgroups seem to judge opinions on their own merit,

Or total lack thereof...

> not by the real or imagined qualifications of the person posting, I

I bet you wouldn't say that to Riley.... Or Mr. Feingold....

> suspect that JR, or anyone else who post opinions in this newsgroup, has
> just as much credibility behind those opinions as you do.

Dwight, you and JR are possessors of neither credibility nor qualification to speak to the causative factors of HR2346. You're a gang of two CB haters angry that anyone could oppose the legislation of your dreams on something as meaningless to you as "jurisdictional grounds", which for those who care about proper implementation of legislation is a VERY meaningful thing, your evident hatred of CB and CBers notwithstanding, and my opposition to HR2346 (although I am a legal CBer) also notwithstanding.

<SNIP "cause everybody hates CBers just like us" Rant>

Other than the fact that JR is a longtime asinine troll in rec.radio.cb... An endless source of such monosyllabic one-liners as "typical cb'er" and "what did you expect
from a cb'er", and Technician Dwight being a more literate anti-CBer hammering out his vengeance on the CBers in misc.transport.road, misc.transport.trucking, and of course rec.radio.cb, sure, they've both got HARD opinion credibility on the causative factors of the Feingold Bill. In their pants, that is.

3090. findable ham group in de.*

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-14 12:02:20 UTC
From: Julian Ladisch <julian.ladisch@student.uni-halle.de>
Message-ID: <Pine.HPP.3.96n.1001214121342.25454A-100000@studcom.urz.uni-halle.de>
Source record: 97807

Currently, there is some discussion going on about the naming of the group de.comm.ham, the amateur radio group in the German language usenet hierarchie de.*. The last RfD proposed to move de.comm.ham into a new hierarchie de.comm.funk.*, "Funk" is the German word for electromagnetic waves. This would be the result of the RfD:

de.comm.funk.amateur
de.comm.funk.cb
de.comm.funk.misc
de.comm.funk.scanner

From time to time hams that don't understand German want to visit a German language country and would like to contact hams. For this reason they post to the German ham group in English. What is needed that English speakers can find the group?

Is de.comm.funk.amateur sufficient, or should "amateur radio" be added to the tag line? Or is there a need to have a name like de.comm.funk.ham or de.comm.funk.ham-radio instead? Or do you have other ideas?

You can post your answeres here. Thank you for your suggestions.

The German discussion is in de.admin.news.groups.

Julian

3091. Sorta OT.....Political Question(s)

Hi, all,

We have several politically savvy folks on this group, and some of you might be able to help me. I'm looking for a way to keep up with pending legislations, especially in the areas of enviromental law, communications, and Religion.....I try to keep up with the news in all the conventional areas.....local and national newspapers, local and national TV news, newsmagazines, etc etc.....but sometimes it seems like laws are passed or decisions are made before I'm aware of them, when I would've at least liked to comment on them to the proper people.

Are there web sites, or pehaps an Email service, that provide news about pending legislations?

Thanks for any info,
Rick N9GSU

It's illegal to use that CB amp on CB.

And it could be argued that's it's illegal to imply for sale
for illegal use.

But it's NOT illegal for a HAM to purchase that CB amp
and run it on his HTX-100, HTX-10, or other radio.

In fact, I'm considering looking at some CB amps
to hack into something to slap on the back of my K2
for when I just want a little bit more kick.

I WANT that stuff available!!

Don't whine and cry because someone else MIGHT
abuse something, or do you want to punish possibilities?
Sounds like the 19th century England when they
predicted criminal activity because of the bumps on
your head...

Actually there are a number, but Kennisaw (sp?) GA is the
most well known (and first I believe) example.

But remember the hurricane that devastated south Florida?

And all the scenes of people picking up the pieces?

With holsters on their belts? And shotguns leaning
against doors in the backgrounds?

Just take a good look at a lot of the old photos...

The real fly in the ointment was the lack of state-wide hand
recounting standards. That was the fault of the Florida Legislature
and/or the Secretary of State - mostly Republicans. They didn't plan
it that way but they couldn't have planned a more effective roadblock.

> from Dwight in RRC:

My qualifications are none of your business, RadioFree. I'm not about to get into a "my qualifications are bigger than your qualifications" debate. Besides, like I said in the previous message, qualifications are not an issue in these newsgroups unless you choose make them so (which Phil did).

As for my messages about HR-2346, if I remember correctly, I've only posted three messages about this subject since the passage of HR-2346 (and one of those related to marine radio regulations, not anything about HR-2346 itself). So your suggestion that I've been posting comments about HR-2346 "in every group that could possibly be of interest to CB'ers" is a boldfaced lie.

In fact, the only reason I posted a response in this thread was because it is cross-posted to a couple of ham radio newsgroups (which is where I saw it). I very rarely even look at the CB radio newsgroup, simply because I'm not really that interested in CB radio today.

> Dwight, you and JR are possessors of neither
> credibility nor qualification to speak to the
> causative factors of HR2346.

RadioFree, I don't really care what you think about either my credibility, or my qualifications. First of all, after your obvious lie above (and below), I certainly have far more credibility than you do. And you don't know a thing about my qualifications, so you have no mandate to judge them.

> You're a gang of two CB haters angry that anyone
> could oppose the legislation of your dreams on
> something as meaningless to you as "jurisdictional
> grounds", which for those who care about proper
> implementation of legislation is a VERY meaningful
> thing, [snip]

When I see meaningful "jurisdictional grounds," then I'll be glad to discuss them. However, so far, all that I've seen is a bunch of nonsense. If there were the "jurisdictional grounds" you claim, then certainly the lawyers at the FCC, the Congress, or the White House, would have already addressed them long ago. In other words, they simply don't exist (other than in your mind).

And it is a little absurd to suggest that just because I support HR-2346, I therefore hate CB'ers. HR-2346 is not anti-CB legislation. Instead, it is legislation designed to address those who abuse the citizens band radio service through the use of improper radio equipment, or improper radio operations.

> [snip] Dwight [snip] hammering out his vengeance on the
> CBers in misc.transport.road, misc.transport.trucking,
> and of course rec.radio.cb,

Sir, you really are a liar. I've never posted a single message, on any subject, in either one of those transport newsgroups. In fact, neither of those newsgroups are even listed as available through my newsgroup server. Therefore, not only do you lack overall credibility, you don't rate very high as a truthful human being either.

Cecil, I would imagine the rules about hand recounts were enacted a very long time ago, and who knows what the political makeup of the legislature was at that time. However, I do agree that, since they now know that the problems exist, there is little excuse for not fixing those rules now.

> hierarchie de.*. ...

Actually, the discussion started because there is no proper CB newsgroup
in the de.* hierarchy, and while we were at it, a new hierarchy for the
radio-related hobbies was proposed including ham radio and scanner,
similar
to rec.radio.*, but maybe in the de.comm.* (communications) hierarchy.

de.comm.ham is a fairly long established newsgroup which has seen
several postings from abroad, also by non-German speaking people.
de.alt.scanner exists, but may be moved. de.alt.hoerfunk (for
broadcast listeners) exists, too, but will be left alone.

> ... The last RfD proposed to move de.comm.ham into a new

Not really a result, but a proposal for the structure of the new
hierarchy.

> From time to time hams that don't understand German want to visit a
> German language country and would like to contact hams. For this reason
> they post to the German ham group in English. What is needed that
> English speakers can find the group?

This means, which name would you prefer? Should the international word
"radio" be used in the group name somewhere (which, in German, is often
understood in the sense of "receiver"), or do you reckon that non-German
readers will easily find the ham radio stuff despite the group/the
hierarchy
having a German name? Would a proper tagline do? Or should we perhaps
better
leave de.comm.ham alone?

> other ideas?

Guten tag, Julian. Any of the examples you gave would probably work.

But, some people, who only speak English, might not understand that
"funk" has anything to do with radio, but I don't think that is a big
problem if your goal is to only serve the few people willing to seek out
a German language radio newsgroup.

However, if your goal is to reach a wider English speaking audience,
then you might want to add "radio" to the name, such as...

de.comm.funk.radio.amateur
de.comm.funk.radio.cb

However, it is a little silly to have "radio" and "funk" in the same
name, but that may be the only way to insure that those who speak
English will find the newsgroup.

Have you considered the possibility of simply replacing "funk" with "radio" (for example, de.comm.radio.amateur)? The word "radio" is widely understood by most Germans, so they should have no problem finding the newsgroup. And that would make it easier for those who speak English. However, the newsgroup may also lose some of the German character if you do that.

Trying to work with two languages is not easy. I, for one, appreciate your efforts to reach out to those who speak English. But that does not make your task any easier. With that in mind, stick to your original idea above (de.comm.funk.?? is good). Tschï¿½s.

I'd leave the word "radio" and "amateur" out of it. Groups with those words in the name only draw posts about American elections.

Close .. it's Kennesaw. Bedroom community a few miles out of Atlanta. The law passed in late 88 or early 89. Mostly in response to the "no guns allowed" law in Morton Grove, Illinois.

The "Kennesaw Law" requires every household residing inside the city limits to own a fire-arm. (They may have owned one already, for that matter.)
Anyway, once the law was passed, home intrusion and neighborhood crime inside the city dropped 97 percent and hasn't gone back up since.

Wonder how these crime stats compare to those of "no-guns-allowed" towns like Washington,DC and New York City. Yeah, Right.

How was my statement racist? Because they are black ? Ok lets change it a bit. Lets make believe the Blacks were still slaves. And the Italians and Jews and Irish were still in hells kitchen of NYC.

And lets further say the Italians with the mafia and the Jews and the Irish were all fighting each other over 'turf' and drugs.

And then I say...as far as Im concerned the Italians, Irish and the Jews can all kill each other off. Is that also a racist statement?

Or does is it just 'racist' when a 'black' is involved....

Your punt dipstick.

Thanks, Dwight. Sounds like a good idea. Maybe I'll just put it in the tankbag and only allow the cords to hang out for mic/speaker, coax, and power.

I have ridden 1,000's of mi. in the rain with no protection from the wind. The weakpoints aren't the raingear, it's the parts not covered by the raingear!! Neck, helmet, boots, gloves!!!!!!! Last March I did a few hundred miles in the Blue Ridge Mountians, as part of a 1500 mile'er in 3 days, 39 degrees and pouring buckets of rain.

By the way, and experience with the throat pick up style mic's ?

TNX fer the tips es 73

Big deal. Point is, back in April the FCC reduced code testing to the bare minimum possible ubder the treaty. They aren't going to budge from that till the treaty changes. Which won't happen until the 2003 WRC. At which time it's highly doubtful that S25.5 will survive.

The code tests in this country were enacted by the FCC and its predecessors. Didja know that in 1965 they wanted FOUR code tests? (5/13/16/20 wpm)

Now it's all history.

So what's your beef, Brian?

You can't even get the technology right.

A typical question back then would be something like "Draw a complete diagram of a typical wireless station. Describe the purpose and function of each part." That's about a four page essay and a page or two of drawing. No multiple choice, no question pools.
>

> > And in 1919 the test speed was doubled to 10 wpm.

> > quite "valid".
>
> Only because hams were forced to learn it.

Not true at all. Nobody is "forced" to learn it, or use it. And it
hasn't been required for a VHF/UHF ham license for almost a decade now.

The US hams you would hear on the HF ham bands using Morse if you
actually bothered to listen are using it because they want to. Sorry if
that bothers you.

> Amateur radio has become an anachronism.

How do you figure?

Ham radio is in many ways similar to recreational activities like
sewing, gardening, hunting, fishing, sailing, horseback riding, and
camping. Very few people in industrialized countries "have to" do any
of them. But some folks find doing those things to be fun in and of
themselves. None of them are "anachronisms". Look up the word.

I'm an old timer, but I'm not old. Only four years older than you.

> Would you have whined about it if you could have?

What's to whine about? A mode was VOLUNTARILY replaced by another.
Spark wasn't outlawed when thousands of hams were using it every day.
>
> > And it happened voluntarily. Tube transmitters gave results that
were

They don't happen in modes anymore. There's no mode that replaces CW
the way CW replaced spark.

> It's much less traumatic than the
> gradual "weaning" from code that is currently stressing the service.

Sounds like you want the USE of code by hams to end - not just the
TEST. Why?

Really? If this was an improvement, how bad was the system before that? In my opinion, they need to throw the whole thing out and start again at the beginning.

And I hope they do it soon, because I have a feeling that this is not going to be the last close election (because of how divided this country is, I think we'll see more in the not so distant future).

Phil,

Congratulations on being one of the only people
in the usenet newsgroups able to properly address
the situation surrounding the controversy regarding
HR2346.

I know that in 1974 during the gas crunch that the Electronic Industries Association was under economical pressure to keep the end costs of their consumer electronic equipment to a baseline figure but at the same time had to do something to offset the rising cost of petroleum byproducts used in the manufacturing of same, namely plastics, so they eliminated the curcuitry necessary to prevent such anomalies as front-end harmonic and fundamental overload to said equipment. Now, I'm not saying there was any type of a conspiracy going on here, but if memory serves me correctly, wasn't the FCCs enforcement budget sort of lacking in or about that same time frame?

<snipped>

I had never heard the "story" about the feingold papers, or the story behind what got the ball rolling. Another case of some supposed protection in exchange for our rights via the usual path of "usurpation" of federal authority by the states". Now I am hearing that the newly created "Federal Motor Carriers Safety Administration" is confiscating export radios from truck drivers out on the roads, I just don't know what "authority figures" they are using to enforce this. I suspect it's probably DOT or local law enforcement. Not sure yet but more information should be forthcoming. I have been told that the officers have detailed lists of the manufacturers model names and numbers at the inspection points. Unless the driver can provide a copy of an amateur license authorizing voice communications in the 10 meter amateur band their equipment is being confiscated "on the spot"!

Soon....more updates on my web site at:

http://www.angelfire.com/az/firecommunications/

Very 73,
NAO911/Jack

Before we go much further, Don, please be informed that I AM
a communications attorney specializing in this field.

The FCC requires licensees (including legal CB/FRS/MURS/Part 15
device operators who are covered under blanket authorizations)
to cooperate to the extent of making reasonable transmissions
to enable the affected device owner's technician to determine
the effectiveness of suppression/protection measures.

A good way to attract lightning from the FCC for operation
"not in the public interest" is to not so cooperate.....

I know this to be a fact because when I was on the FCC staff
(District Director, San Ftancisco) I and several of my
counterparts in other districts initiated the policy and
it became nationwide many years ago.

In fact, the Federal Courts of Appeal have held that even THEY
do not have jurisdiction to hear nuisance or damage cases
arising from interference complaints - that only the FCC has
jurisdiction where interference is alleged - and they cannot
and will not hear any case except an appeal from a FCC ruling
and then only on procedural grounds, not factual grounds.

That is how it turned out, in fact. But one has to wonder how it would
have turned out if Gore had just had the entire state recounted,
properly, early on instead of leaping to count only the counties where
he was so sure he could glean enough votes to put him over the top -
only to learn that to get it done, well, the method of couting will have
to be "modified", during the recount. Then modified again......

That's just it, Dick, without standards from the Legislature,
it was impossible to properly hand count Florida. Florida's
"intent of the voter" standard, leaving it up to each county,
is unconstitutional. The courts are not allowed to dictate a
standard.

Even if the entire state had been hand-counted, Broward's method
and Palm Beach's method would still have been different. That's
a no-no.

"Dwight Stewart" <stewartx@sccoast.net> wrote in message >

<snip>
> As for my messages about HR-2346, if I remember correctly, I've only
> posted three messages about this subject since the passage of HR-2346
<snip>

More than 50 (closer to 150, but I'm trying to be conservative) cross-posted replies split between TWO MISC.TRANSPORT groups from a Technician Class individual with the call sign W5NET and the name Dwight Stewart arrived at misc.transport.road and/or misc.transport.trucking. The archived posts are available for anyone to count and confirm at Deja.com. I don't lie, sir.

Here are just a few excerpts from your 50+ posts to BOTH misc.transport.trucking AND misc.transport.road. I've already shown a good one from rec.radio.cb - but I'll include it again, since you felt the need to snip it from your response without explanation or admission. All excerpts (excluding the first) were found in EITHER or BOTH misc.transport groups you deny ever posting in.

I was just wondering something about HR-2346? Since this allows local legislators to write laws based on FCC regulations, will that include the forfeiture amounts spelled out in the FCC regulations? In other words, are we talking about local courts handing out fines up to $20,000 for each rule violation? If so, that will certainly encourage local law enforcement officers to go after CB'ers with a vengeance (there are very few $20,000 speeding tickets).

And I guess that is where we differ in our outlook. You see possible widespread police abuse, while I see a possible solution to a widespread abuse problem that has existed for years. With our different outlooks, I seriously doubt that we would ever agree.

If you don't agree with that, then I suggest that you gather up all your CB buddies and rush out to change those laws. However, don't count on my support - I agree with the laws in question (including the proposed one).

Therefore, I don't really share your concern. But, in the end, we'll have to watch this carefully to see how well it is working. Until then, I'm not worried.

Second, it should help to reduce the bad public impression that hobby radio in general has thanks to antics of the CB'ers over the years.

So, the only solution left is to allow local enforcement. In other words, in my opinion, even bad local enforcement would be far better than what we have now from the FCC (which is virtually no enforcement).

> Sir, you really are a liar. I've never posted a single message, on
> any subject, in either one of those transport newsgroups. In fact,

Especially not with the subject "Re: HR 2346 STATE & LOCAL COPS TO ENFORCE CB RADIO REGS" which was the topic in EVERY SINGLE ONE of the 50+ replies I reference. Strange that you wouldn't remember posting or replying there even ONCE.

-Ahem-

> neither of those newsgroups are even listed as available through my
> newsgroup server. Therefore, not only do you lack overall credibility,
> you don't rate very high as a truthful human being either.

Sir, if those groups aren't available through your server, I'd like to know how so many of your "Enforcement-By-Any-Means-Necessary" replies got there. YOU are a liar as well as a fool, sir, in denying what is so easily proven. Does your server allow you access to Deja, Sir? Go and reveal to your right hand what your left hand has been posting... SIR, before calling anyone a liar.

You called me a liar when I was only pointing out the myriad of reasons you and JR, of all people, would maintain HR2346's causative factor was primarily some Great Mandate of The Interference-Weary American People (which anyone without your bias should know is ridiculous) in direct contradiction of the more sensible and likely explanation given by a contributor with *actual professional background* and thus *qualification* and *credibility* you and JR did not and do not have as the result of your desire to see enforcement no matter how unwisely implemented. I put it to you yet again, having shown MUCH more proof than necessary to back it:

Dwight, you and JR are possessors of neither credibility nor qualification to speak to the causative factors of HR2346.

Well, just think of how strange it seemed then, but not so much now.
While the "mine shaft" thing is a stretch, some of the CDMA and PCS
phones are getting pretty small and have very low power consumption
these days... Who would have thought that there would be so much
wireless infrastructure that these devices wouldn't need much direct
range? Direct satellite links are now a normal thing too. Maxwell
Smart's "shoe phone" was a sci-fi joke at the time, but it seems like a
complete dinosaur now - right? Even the oldest hand-held analog
cellular phones were more compact.

Maybe, maybe not. From http://www.amsat.org/amsat/news/ans.html

"Early Wednesday, December 13th, telemetry transmissions from AO-40
stopped while work on the 400 N propulsion system was in progress. An
investigation by the AO-40 development team has begun. They are now
waiting for certain on-board software events to occur on Saturday
afternoon, December 16th. These are programmed to start a spacecraft
emergency routine called 'command-assist' which attempts to re-establish
communications. This offers the best chance of recovering evidence of
the incident which made the telemetry transmissions stop."

A little premature. According to the bulletin from AMSAT there's an emergency routine that will kick of on Saturday afternoon that may help to re-establish communications. I'll be holding my breath until then.

No..No...I wish we had some VIABLE third parties. I jumped on the Ross Perot road show...and by the time I figured it out (that he was there to take votes from George SR.) it was time for the worst administration in American history. 8 years later I still feel bad about this third party thing.

At this particular juncture I am a Republican. Because they are the most conservative party of any consequence we have. If that changes then so will I.

Back in 1960, when I was 13, I became interested in politics. I saw John Kennedy on TV. I convinced my mother to drive me to see him speak. I followed him intently all through his short lived Presidency.

If he was running today he would be a Republican. The democratic party has been destroyed by special interest splinter groups. Some of which are the fags, the socialists, and the anti-constitutionalists. It is NOT THE PARTY of Jefferson ANY LONGER. They have become a destructive force and should be nullifed. And they WILL BE.

Some of us 'baby boomers' remember how it was with JFK. The country felt good. Then it didn't. It still doesn't. Perhaps this little 'episode' will enable it to feel good again. I know I do.

No.

All that is known is that AO-40 abruptly went off the
air during ground station operations. AMSAT have
confirmed this. There was an anomaly with the 400N
thruster firing. Again, AMSAT have confirmed this.

Exactly what has happened is not yet known, so it is
inappropriate to declare the satellite lost.

There are several levels of recovery, and the
controllers are working on them. Let them do so.

Point is, that when Morse was used across the services and across the
seas, it was just fine at 5wpm and 10wpm. When it became the exclusive
domain of the amateur service, it needs to stay real fast for some
reason, for some bozos.

> Now it's all history.

It'll all be history after they count the chads at WARC 2003.

Having never seen or touched one, I could do 1/2hr research at the library, commit it to memory, and regurgitate it to Dept. of Navy examiner or whoever was doing it at the time. I'm sure Jeff will pop in here and set the record straight as he sees it.

Doesn't bother me. They are using it because they were forced to learn
it via the Novice or General entry level licenses.

> > Amateur radio has become an anachronism.
>
> How do you figure?

You've heard it before, but as you're getting on in years here it is
again. Because OFs require a filter, because they had to do it and so
should everyone else, because it gets through when nothing else will,
cause it might save your life by sparking two wires together, cause it
means you worked hard, cause you will value your license, cause...

Aaron Jones was keeping the list.

> Spark wasn't outlawed when thousands of hams were using it every day.

I dunno? Why did someone retell it here on rrap from an old QST
article?

And it IS outlawed today unless you need to weld two pieces of steel
together. Hmmm, maybe I should take up arc welding again. I saw a
lincoln at a yard sale last summer.

> > > And it happened voluntarily. Tube transmitters gave results that

> > gradual "weaning" from code that is currently stressing the service.
>
> Sounds like you want the USE of code by hams to end - not just the
> TEST. Why?

You might like to think that, but its NOT what I said. Let morse
code/cw stand on its own merits and allow it to prosper or flounder
without government forced support. The gubmn't hasn't forced PSK31 on
anyone but it is such a good idea and such a good mode that it doesn't
need to be forced.

You started this by staking out a lot of spectrum for cw exclusively. I realized that it was simple posturing in order to get us "thinking along party lines" concerning our comments to the ARRL. Apparently, the idea of cw having to compete in a "free" marketplace scares the hell out of you.

Good luck after 2003.

I agree, it needs to be done as a reasonable and consistent standard on a
Nationwide basis. But I don't see how any system can be implemented that
everyone will agree with, as any system I can think of will require the
voter to be able to read and write, follow simple instructions, and possess
basic comprehension and reasoning skills.

The only way to ever know who really won the election on a National basis is to do a Nationwide recount using a legitimate standard. And with a so-called "undervote" of over 1.5 million ballots nationwide, I suspect that an accurate Nationwide recount could well have given the popular vote to Bush also, since he carried the majority of states as well as the vast majority of all counties nationwide.

Remember, 7 of 9 Supreme Justices ruled that the recount was not
Constitutional.

2 of the 7 thought they could define standards and set a new date for the
completion of the recounts, but the other 5 knew that it would be overturned
because it would create new rules after the contest - which is in violation
of Federal law.

The Supremes were not radically divided over the decision to stop the
recount and reverse the FL court decision, they just couldn't agree on a
legal remedy.

3146. EOSS-46 balloon delayed

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-15 01:25:19 UTC
From: Rick von Glahn <rickvg@iex.net>
Message-ID: <eXI5Oihc+pQdanPSPD1kW86ln1vp@4ax.com>
Source record: 97764

Hello Everyone,

EOSS #46, currently scheduled to launch December 16, 2000 has been rescheduled to January 13, 2001 due to forecasted weather issues. The current and forecasted outrageous winds aloft data assures the flight will travel 150 - 225 miles, well out of range of our ground control stations. This range will not allow control stations to conduct, monitor and control the airborne experiments

Additionally, forecasted ground winds are well above the EOSS maximum wind standards for a flight with a very complex, multiple-balloon flight string.

For all of you who were planning to watch this flight as well as participate on the crossband repeater, be sure to mark your calendars for January 13.

Hello,
I am interested in designing a very low power TX and RX. (range of 10 meters) It's concept does not have to be anything more than just a carrier operated relay. (i.e. The receiver only has to detect the pressence of carrier from the transmitter and toggle something)
I have a good knowledge of electronics but not much of a background in RF and I am looking at this project as a learning experience. Could anyone please refer some good RF design books or web sites that would help me in this regard?
Thanks,
Philip

Dwight, I don't know if any of it makes any difference. We had the possibility of either 1) the guy with less popular vote being elected (came true) or 2) the guy who invented the internet being elected. Most politicians simply cater to the interests with the most money. I am sure that many, like Gore, barely made it through college and may not be all that smart - but they are smart enough to say whatever it takes to make people happy at the time - and then just forget what they said. The saving grace for amateur radio has been that no one is interested in HF to any large degree, and VHF is already congested. We lost part of 220 and 440 has been under attack. Oh yes, we lost part of some of the microwave frequencies too. Best we buy some CB radios and join the happy HFers. Gotcher ears on?

I never said he did lack them, Dick. I said that qualifications did not give Phil more credibility to speak about this issue in this newsgroup than anyone else, which I assume you would agree with. Or are you now saying that nobody in this newsgroup is allowed to talk about a subject if they lack the "proper" qualifications?

However, that is exactly what Phil was saying to JR when, after posting his own qualifications once again with his signiture, he challenged JR's qualifications by asking,"what professional background do you bring to substantiate your claims?"

I then went further to suggest that qualifications (of any kind) are not a clear indication that the person actually knows what he is talking about, which I assume you would also agree with. I went further to suggest that this is especially true if the person is wrong (which Phil is in this case).

Here is the case I was thinking of:
From www.arrl.org:

Mississippi Ham Awaits Court Decision in RFI Case
NEWINGTON, CT, Oct 29, 1999--A Mississippi ham arrested for interfering with his neighbors' telephones is awaiting a decision on his request to throw out the complaint on the grounds that the state court has no jurisdiction in the matter. ARRL member Bennie Stewart, KJ6TY, of Meridian, was arrested and charged September 10 after a neighbor filed a complaint with the Lauderdale County Justice Court.

Stewart, a ham for 12 years, appeared in court October 26. He says his attorney, Felecia Perkins, filed a request to dismiss the complaint, brought under a Mississippi law that makes it illegal to "intentionally obstruct, injure, break or destroy, or in any manner interrupt any telegraph or telephone line or communication thereon between any two points." Stewart has maintained that only the FCC has jurisdiction, and his station is operating properly. The case has been continued while the court mulls its decision.

Stewart's neighbors also were in court but did not have an opportunity to speak. "My attorney told me, 'Your neighbors are mad because you're not going to jail'," Stewart said. If convicted, he faces a fine of up to $500, six months in jail, or both.

Stewart said the prosecutor had wanted a group of hams to inspect his station, but he said one of the group that was supposed to conduct the inspection called him Thursday to say the group had decided not to get involved in the case.

"It should have never gotten to this point in the first place," he says, adding that he's tried to work with his neighbors regarding

telephone interference ever since the first complaints arose three or four years ago. "I put myself on a schedule," he said, operating on 40, 20, and 10 meter SSB only on weekdays between 8 AM and noon when his neighbors were at work. He says he never operates on weekends. Stewart says he stayed off the air for a while after his arrest, but he has since resumed limited operation.

He says he runs a Kenwood TS-440 barefoot. Although he does have a beam, he says he got rid of his Heath SB-220 linear amplifier after the RFI complaints surfaced.

"The problem is not here," he says of his station.

A retired professional photographer, Stewart--who's 60 and confined to a wheelchair--spent ten years in California after his retirement, but he moved back to his native Mississippi in 1993. His arrest shocked his friend and generated a lot of media attention. "My phone hasn't stopped ringing," he said. The case also has attracted the attention of the Amateur Radio community.

Stewart described his arrest--which he says took place in front of his three-year-old granddaughter--as a traumatic experience.

"It was humiliating," he said. "They bodily arrested me, and I'm in a wheelchair!" Stewart said he was taken to the sheriff's department, where he was booked and a mug shot taken. He had to post a $500 cash bond to avoid spending time in jail, he said.

Up until now, Stewart says, he's had no problems with the law. "I've never had a parking ticket," he said.

The pending legal issues aside, Stewart said he has tried several ways of dealing with the interference complaints beyond restricting his operating hours. He said he invested $175 in a 900-MHz cordless telephone that proved to be totally interference-free when installed at one complaining neighbor's home. Stewart says he offered to let the man use the telephone indefinitely as long as they both lived in the neighborhood, but the man refused the offer.

He's also offered filters, different telephones and other remedies, but says his neighbors have refused to cooperate.

Stewart says he expects the court to rule on the case very soon.

Commonly the guy with the best qualification gets to set the pace.If
anyone here is situated so as to be credible at asking another's
qualifications, it is Phil. It is NOT you. Of course you may say what
you wish, with egg accumulating on your face according to the extent of
your, well, cluelessness.

> I then went further to suggest that qualifications (of any kind) are
> not a clear indication that the person actually knows what he is talking
> about, which I assume you would also agree with.

You would ass-u-me wrong.

I went further to
> suggest that this is especially true if the person is wrong (which Phil
> is in this case).

So you know that what you say is exactly correct and that what Phil
says is not.
Yeah, Right, Dwight!

One of these days you'll probably walk into a Mack truck that you were
sure was only a mirage.

3158. "Frequency" on payperview this comming month

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-15 06:34:15 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <3A39BB67.CAD17BCF@ix.netcom.com>
Source record: 97776

If anyone is interested, the movie "Frequency" is going to be on payperview this comming month. If you want to pay 4.95 or whatever your CATV system charges.

3159. Re: For Mark - Re: Vertical Limit

> at misc.transport.road and/or misc.transport.trucking.
> The archived posts are available for anyone to count
> and confirm at Deja.com. I don't lie, sir.

Again, you are a liar. I will repeat what I said before - while I have certainly never posted anything about HR-2346 in those newsgroups, I have never posted a single message, on any subject, to either of these transport newsgroups. Again, neither of those newsgroups are even listed as available through my newsgroup server.

In fact, I just checked with Deja.com to see if someone was using my callsign, or my name, in these newsgroups and it verified that there were no posts under the name "Dwight Stewart," or under the callsign "W5NET," in either of those newsgroups. If anyone would like to verify this for themselves, click on the link below and enter either my name or callsign in the search block.

http://www.deja.com/usenet/

I've posted a lot of messages over the last six or seven years, so don't be surprised at the number of total messages to search through (I was). If you want to make the search a little easier, enter the word "transport" after either the name or callsign to narrow the search.

You can also search for both "Dwight Stewart" and "HR-2346" to see that I was correct when I said that I've only posted 3 messages about HR-2346 since its passage in the rec.radio.cb newsgroup, instead of the hundreds that RadioFree claims.

> Especially not with the subject "Re: HR 2346 STATE
> & LOCAL COPS TO ENFORCE CB RADIO REGS" which was
> the topic in EVERY SINGLE ONE of the 50+ replies I
> reference. Strange that you wouldn't remember posting
> or replying there even ONCE.

Oh, so that is the crap that you're talking about. You need to get your facts straight (and learn how to use deja.com). That was a thread in one of these ham radio newsgroups about 3 months ago that appears to

have been crossposted to those newsgroups. In fact, if you read some of the messages, you'll see that I was talking to ham operators (Cecil, David Little, Phil, etc.).

Again, I've never posted a single message directly to those trucking newsgroups. To verify that, search directly in those newsgroups using my name or callsign (which will only list messages directly posted to a thread in those newsgroups, not crossposted messages in a thread from another newsgroup). I cannot be held responsible for where messages I've replied to were crossposted.

But, regardless, since those messages were posted three months ago (prior to the passage of HR-2346) how do those messages support your claim that I was "announcing the passage of HR2346 with a big grin and wielding it like a club in every group that could possibly be of interest to CBers?"

> You called me a liar when I was only pointing out
> the myriad of reasons you and JR, of all people,
> would maintain HR2346's [snip]

No, I called you a liar because you claimed that I was "announcing the passage of HR2346 with a big grin and wielding it like a club in every group that could possibly be of interest to CBers." Which, in spite of the messages from a ham radio newsgroup discussion you found above (posted three months ago, prior to the passage of HR-2346), is a boldfaced lie.

It should be called "paper view". You show the CATV company some
paper, and you can view it.

3165. Relay activated Stored Voice Transmitter Controller?

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-15 07:45:31 UTC
From: S Reeves <kleptein@hotmail.com>

The club that I am a member of is trying to find a device to accomplish the following task..

We have an aircraft ELT receiver which provides a contact closure upon reception of an ELT. When this unit activates (it is located high atop a nearby mountaintop) we would like it to key up a radio and transmit a predefined stored voice message, or even just a tone for that matter.

My question is... short of a full blown repeater controller does anyone manufacture such a device. Or, what repeater controllers can handle this task?

Any suggestions?

Thanks! Shawn

Oh, I've put a lot of miles behind me in less than ideal weather conditions, including a 3000 mile cross country trip from Washington to Virginia in the dead of winter (the southern route). That trip involved heavy rain in Washington, a snow storm in Oregon, a flood in Arizona, a sand storm in Texas, solid ice in North Carolina, and two traffic tickets for speeding. Trust me when I say that I will never do that again.

In fact, a motorcycle was my primary means of transportation when I lived in Washington State years ago (it always rains there - the club was called the "Rain Riders"), and for several years in Germany (again, rain is common). Of course, I didn't mind so much in Germany, where public transportation is excellent and I had a BWM R100RT to cruise around on when the weather was tolerable.

Anyway, through all of that, I never had much luck with raingear. The rain always seemed to find a way into everything. It would seep in around the neck, wrists, legbands, waist, or zipper, of any rainsuit I wore.

And, if I had a radio exposed, rain would wick its way up the coax and power cables into whatever container I used. The only solution was total isolation of the radio, and all parts, behind something (usually a fairing or simple windshield).

> By the way, and experience with the throat pick up style mic's ?

Nope, I always used a plain old microphone. Therefore, I have no idea how well they work. However, a lot of people are using them, so they must be okay.

Take care, Wally.

My apologies. I personally like the code and frankly, it helped my general class wife save the life of a non-hearing man who was a ham. The man was in the hospital and was fortunate to know that my wife had just received her general class license. During a breathing emergency one evening, he was able to tap out
his symptoms to my wife, who relayed to the physician on call. The code was his only reliable communications device, so I think that it's use in a movie is appropriate. And yes, there are lots of hams behind the scenes of movies that get ham "plugs" placed into the script. I think morse code will always have a place, in the same
manner as bow-hunting, hand reloading of firearms, survival stuff (whatever that is), and many other things
which require a bit of study and skill to participate. The fact that the military has replaced ham operators in
favor of more modern equipment is really not the death knell for the code. My personal form of communication
at the moment is 5 watt am cb - line of sight. Something romantic about talking to some stranger 20 miles away for me... Anyway,,,the movie was fast paced, filled with well done gags, and went by very fast. Not quite as good as "Cliffhanger" which was super exciting, but good, nevertheless.

My main gripe about CB is that if you speak well, and don't have an echo on your signal, and you have a nice,
clear signal, literally NO ONE will talk to you....I
mean.....Shit..!.......

Thanks for the well reasoned resonse to my perhaps to hastily formed reply to your post....

>No..No...I wish we had some VIABLE third parties.

Me too. But with campaign financing the way it is, and the way the two big parties control things like the debates, that's not very likely.

> I jumped on the Ross Perot road show...

Lot of people did. Note that he got into the debates. The big boys didn't make that mistake with Nader. Even without the debates, the Green party candidate got 2.9 million votes. Imagine if he'd been on the debates...

>and by the time I figured it out (that he was there
>to take votes from George SR.)

Wasn't that obvious from the get-go?

>it was time for the worst administration in American history.

You lived through all of them? ;-)

Clinton is neither saint nor statesman, but there's no way his was "the worst administration in American history". Think of James Buchanan, whose corruption and ineptitude set the stage for the Civil War. Andrew Johnson, who was impeached and survived by a single vote. Or what about Nixon? His VP (Spiro Agnew) resigned in disgrace, and then Nixon himself had to resign to avoid impeachment and certain conviction.

8 years ago, the Dow was 3600, unemployment was a major concern and the budget deficit was huge. Interests rates were getting lower but were still too high. Now we have both low inflation AND low unemployment (which the economists tell us isn't supposed to happen), low interest rates, the Dow is over 10,000, and the big argument is about what to do with the budget SURPLUS! Pretty decent for the "worst" administration!

>8 years later I still feel bad about this third
>party thing.

Why? Perot did the trick for Clinton. Now Nader did the same thing for Bush. Turnabout is fair play.
>
>At this particular juncture I am a Republican. Because they are the
>most conservative party of any consequence we have. If that changes
>then so will I.

The terms "conservative" and "liberal" are tossed around so casually these days that they have no real objective meaning. How do YOU define them, Dan? I was taught that "conservatives" were for keeping things the way they are, and maintaining traditional values, while "liberals" wanted things to change, change, change.

Take the code testing issue - are "conservatives" procodetest and "liberals" anticodetest, or the other way around?

Remember "family values"? The first divorced person to be President was Ronald Reagan.
>
>Back in 1960, when I was 13, I became interested in politics. I saw
>John Kennedy on TV. I convinced my mother to drive me to see him speak.

I remember JFK well, though I'm a bit younger. Camelot and all that. People said he couldn't be president because he was Catholic. And Irish.
>
>If he was running today he would be a Republican.

> The democratic party has been destroyed by special interest splinter groups. Some of which
>are the fags, the socialists, and the anti-constitutionalists.

You gotta be more descriptive than that.

>It is
>NOT THE PARTY of Jefferson ANY LONGER.

Neither is the Republican party the party of Lincoln any longer.

>They have become a destructive force and should be nullifed. And they WILL BE.

The Supremes sure did a number on 'em, anyway.

>Some of us 'baby boomers' remember how it was with JFK. The country
>felt good. Then it didn't. It still doesn't.

Ask yourself WHY.

It "felt good" because you were a kid and things appeared to be simple. Americans were #1 and the best at everything, we were told.

Except the Rooskies kept waxing our tail in the space race. And while we claimed to be a democracy, with liberty and justice for all, we had stuff like segregation in voting, schools, jobs, housing, and transportation. Not just in

the South, either, and not just against black people.

Then "weirdos" like Nader told us our cars weren't as good as they could be - and they turned out to be right. Stuff like DDT and leaded gasoline turned out to be poison. JFK got us started in a little war in southeast Asia. He also almost started a nuclear exchange with the Russians over missiles in Cuba - even though we had similar missiles in Turkey and nuclear bombers in Europe.

JFK's successor, LBJ, stepped up the little war but couldn't win it. He also got the USA started on bigtime deficit spending to finance the space race, the "Great Society" and Vietnam all at once without raising taxes.

Nixon got in partly on a promise of a "secret plan" to end the war - but the plan took almost 7 more years to implement, and involved stuff like bombing Cambodia.

Then OPEC turned off their oil - twice - and showed what really controlled things.

I could go on, but I think you get the picture.

>Perhaps this
>little 'episode' will enable it to feel good again. I know I do.

You want to go back to the way things were in JFK's time? I don't - at least not the way everything was.

There are existing English language ham groups like rec.radio.amateur.*,
so there is no need to make the German ham group bilingual. However,
English postings are welcome in the German ham group when they are about
countries that have German as official language.

3174. Sounds (noises) Of Christmas

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-15 14:04:52 UTC
From: Allen Lee <alee@pobox.com>
Message-ID: <8p8k3t4fsmt4vsvul7jgrq3qffm5mdur4o@4ax.com>
Source record: 97692

With the comming holidays season and the snow, I started having strange noises on my HF radio. Not specific to any band, it was generally everywhere. I had suspected some powerline noise as the cold and snow showed up about the same time. As I sat and cursed and listened to this strange noise move through segements of the bands, I thought "This is quite strange as it seems to change through frequencies, and then re occur". So I started thinking what was new in the house that wasnt associated with the outside weather. Fish tanks were here long time and not problems, heater has been running but it wasnt a problem before and the noise remained when heater was off. So that narrowed it down to the Christmas decorations that went up last weekend (same time the snow and cold hit), so I remembered that we used a touch sensative metal bell on the tree that the lights connect into and that is used to turn on and off the lights. So, this morning I turned on the HF rig and sure enough there was that horrible noise again at S9+. I walked over to the tree and unpluged the light control.....viola! ! ! the noise was instantly gone! So if your expierencing some strange "Sounds of the Season" on your radio, mite want to look real close around your own living room. :)

Happy Hollidays All

Original Virus Eliminator circuit utilized a 555 for 50-50 duty cycle
operating a lo-current relay via a 2N2222 to flip the 36v polarity to
the pad attached to the top of each foot. Voltage within the bloodstream
was about 2.4 @ 50-100 microamperes adjustable.

IIRC the Stewart case was dismissed for lack of jurisdiction
(as some of us has been claiming for YEARS).

I don't recall the exact number, but at least five Federal
Appellate Circuits have declared in cases referred to them that
the FCC has exclusive jurisdiction in radio interference
cases. There are 12 or 13 such Circuit Courts nationwide,
depending on whether one counts the US Court of Appeals for the
Federal Circuit, which deals in Federal Tax and Patent appeals
only. In general, one Circuit will defer to a finding in a
"sister" Circuit in matters which have not yet been brought up
in their own Circuit.

Not true at all. Your information is faulty.

The test speed went to 10 wpm in 1919, when hams were allowed back on
the air after WW1. Might have been part of a deal with the Navy dept
back then.

And you needed 10 wpm for any type of US ham license at all.
The "Amateur Extra First" license, enacted in 1923, required 20 wpm.

It stayed at 10 wpm for just 17 years (1919-1936). Then it went to 13
wpm - for ALL types of US ham license.

If you know anything about radio history, Morse played a central role
on the air all that time.

In 1951 the 5 wpm and 20 wpm speeds were put back - 5 wpm for the one
year Novice and the 220-and-up Technician, and 20 for the full-
privileges Extra, whcih was supposed to replace the Advanced.

In 1952 the FCC changed its mind and gave all amateur operating
privileges to all US hams except Novices and Technicians.

in 1963 the FCC changed its mind AGAIN and started the changes that led
to "incentive licensing". 20 and 16 wpm were the FCC's idea.

> When it became the exclusive
> domain of the amateur service,

Which happened when? A year ago?

>it needs to stay real fast for some reason,

20 wpm Morse is not "real fast" at all.

>for some bozos.

I see. If somebody disagrees with you and presents facts and
experiences that you don't have, they are a "bozo". Right.
>
> > Now it's all history.
>
> It'll all be history after they count the chads at WARC 2003.

It's "WRC", not "WARC". And the point is that all code testing but the
absolute bare minimum is gone.
>

Where have I ever defended such behavior - by either side in the
debate? You can find any behavior you want if you look hard enough.

Here's the mirror image for you: Some new folks look at the way things
are, with no knowledge of history or how things are done outside their

narrow range of experience, and immediately dub themselves experts.
They show no respect to those with more experience who hold differing
opinions, but want THEIR opinions respected and acted upon.

Because the FCC said so.

Early spark rigs could not be keyed faster than 20-30 wpm or so. Tube
rigs could go faster. The widespread use of speed keys upped the ante
further.

>Then even later it was back to 5 wpm...

For raw beginners and VHF/UHF, where CW was rarely used.

Sure it does. The way you post shows it.

> They are using it because they were forced to learn
> it via the Novice or General entry level licenses.

Nope. They could have stopped as soon as the test was passed.

I could have stopped using CW in 1970 - but I didn't, because I like it.

It's like saying all those folks who run marathons do so because they
were "forced" to run laps in high school.

For as long as some of us keep using it. Lord willing, I've got four
decades or so left. And there are better CW ops than me who are a lot
younger.

Hasn't been any forced support for any mode for half a century.

> The gubmn't hasn't forced PSK31 on
> anyone but it is such a good idea and such a good mode that it doesn't
> need to be forced.

There are questions about digital modes in the written. More of them
every day.

How much PSK31 have you done?
>
> You started this by staking out a lot of spectrum for cw exclusively.

25%. Also 25% exclusively for digital and 50% exclusively for analog
phone. On the HF bands only.

> I
> realized that it was simple posturing in order to get us "thinking
along
> party lines" concerning our comments to the ARRL.

No, it was a new idea meant to solve several problems at once.

> Apparently, the idea
> of cw having to compete in a "free" marketplace scares the hell out of
> you.

Nope. Not at all.

The idea that some hams might be able to do something you won't sure
seems to scare the heck out of you, Brian.

Would you want all campers to have to "compete in a free marketplace"
at national and state parks?

The idea is that the various modes would have space reserved for them.
And ONLY those who wanted to use Morse would have to pass a test on it.

Guess even that's too much to ask of some folks.

I think it's called a "Jailbird 5000". You can hook them up as a duplex
feed, using a standard 75 ohm splitter, in common with your TV coaxial
cable, thereby saving you the expense of buying a separate run of feedline.

Not sure who sells them, but if you give Riley Hollingsworth a call, or
email him at www.fcc.gov, he will surely point you in the right direction.

I heard that, I did there, Roger-D there good buddy there, May the good lord
take a liking to you there, all the good numbers there, your walking the dog
there, really blowing smoke there, we're off and clear there and back quiet
there...

Can anyone give me info on the proper operation
of the MFJ-931 artificial ground ?

How about a few scans of the manual so I can
get it properly operating.

Thank you

KC2HCF

Connect a counterpoise wire first!

Twiddle the knobs for maximum MFJ-931 meter defelection while transmitting.

I used one in a second story room.

Download the brief manual at:
http://www.mfjenterprises.com/manuals/

>

Actually, what I've read indicates the change to 13 wpm was
due to an ARRL director named Desoto. The FCC, or
whatever it was back then, approached the ARRL with
the concern that the number of HAMs was becoming
unmanageable, and wanted a way to 'limit' their numbers.

Originally Desoto proposes 12-1/2 wpm, but that was
changed to 13 to be a whole number and easier to time.

Mike

>Again, you are a liar. I will repeat what I said before - while I
>have certainly never posted anything about HR-2346 in those newsgroups,

Your name and HR 2346 in the searchbox at deja.com will show the transport threads you claimed NEVER to have posted to. That was your challenge and you have been busted. You are positively *pathetic* in your attempt to blame me for your mistake.

> > Especially not with the subject "Re: HR 2346 STATE
> > & LOCAL COPS TO ENFORCE CB RADIO REGS" which was
> > the topic in EVERY SINGLE ONE of the 50+ replies I
> > reference. Strange that you wouldn't remember posting
> > or replying there even ONCE.

> Oh, so that is the crap that you're talking about. You need to get

YES, that IS the CRAP I'm talking about which you (again) say NEVER happened but STILL deny after PROOF has been shown. Foolishly, cowardly, and in complete negation of any honor or credibility you may have thought yourself to possess.

> your facts straight (and learn how to use deja.com). That was a thread

My facts are *too* straight, evidently, and you seem to want to re-word your challenges to me without admission or apology now that you've been busted. I would say I am more familiar with deja.com than is comfortable for you.

> in one of these ham radio newsgroups about 3 months ago that appears to
> have been crossposted to those newsgroups. In fact, if you read some of

What's this? "Appears to have been crossposted to those newsgroups"? You mean those transport newsgroups? Your challenge to me was:

>I've never posted a single message, on
>any subject, in either one of those transport newsgroups. In fact,
>neither of those newsgroups are even listed as available through my
>newsgroup server.

Whether or not you realize it, your server has access to those groups if you have been crossposting messages to them. Unless you believe in magic. You challenged me and I produced. You're a *spankard* for not being *man* enough to own up to it, apologize for calling me a liar, and THEN re-word your challenge, if you thought it could help your position.

> Again, I've never posted a single message directly to those trucking

You've never posted a single message *DIRECTLY*... Usually the word "Again" precedes something you've already said. In this case it does not, and shows the re-wording I charge you with yet AGAIN... AGAIN, DO YOUR RESEARCH before calling anyone a liar.

Shame, thou dishonest and duplicitous SPANKARD!

This willingness of yours to dodge the facts to support your position is PRECISELY the reason I challenged your credibility. In all truth there was no need for me to reference any number of your posts in any newsgroup, but I did and have met your challenge with ample proof. Face it and get over it.

I have shown that your weak attempt to challenge a professionally qualified and credible individual's opinion as to the causative factors of HR2346 is a direct result of your CB enforcement fetish - no matter the cost to operators, legal or not, and regardless of the impact of "jurisdictional issues" which you (without any qualification to speak of) consider "nonsense".

Since your stated opinion is without question neither credible nor qualified (that HR2346 is primarily the response to some great mandate from the citizens at large), I am within my scope of understanding to take issue with *your* claim.

Simply put, if you think many folks outside hobby radio give a rat's tail about CB, you're suffering from delusions, misinformed, or driven by unreasonable bias. It's definitely all of the above in your case. You cannot speak on the subject objectively with any credibility at all.

I have already proven this main point. I will not be answering to your "new and improved" challenges, for your status as a backpedaling SPANKARD makes it unnecessary.

I , and a bunch of good old Georgia boys. have been saving moving boxes since Roseanne Barr and Alec Baldwin among others stated they would leave the country If George W. Bush were elected.

We sit here with our pickup trucks gassed up and are ready to assist them in packing.

We need the addresses to report to for duty. Can you help! E-mail to them has gone unanswered (most likely due to their phones being disconnected for the move) and we are at a loss.

We strive to do our civic duty, it is imperative they not be subjugated to the common sense of the right. Please forward, or ask your listeners to forward, directions to their homes.

desperately

The Federal Reserve has canceled minting of a new coin. The coin was going to have the new President and Vice-President on the front and back side if Gore and Lieberman had been elected. Now that George Bush and Dick Chaney have been elected, the Federal Reserve decided they did not want a Dick and Bush on the coin instead a Head and Tails.

I Remember JFK Really well - He had hookers brought in to the white house on a regular schedule, was having an intimate affair with Monroe (along with his brother bobby too). The first thing he did was to appoint brother bobby to be attorney general - and his first act was to try and remove the rest of the organized crime families so they would no longer compete with the kennedys. He almost got us into a world war by calling Castro and exposing the US's plans during the bay of pigs because he was playing hide the salami with princess grace and his advisors couldn't contact him so he "got even" - Lets see - he escalated Vietnam. Talked a great game but if he couldn't with it, he wasn't interested. Hmmmm I wonder if Dubya, the president not-elect will appoint jeb..... Kennedy - What a president!!!

> back then.

Not true and then you agree with me?

> And you needed 10 wpm for any type of US ham license at all.
> The "Amateur Extra First" license, enacted in 1923, required 20 wpm.

But depending on the dates you want to look at, either 5, 10, or 13 wpm
was the ENTRY level morse test. 20wpm was NEVER the entry level exam.

> It stayed at 10 wpm for just 17 years (1919-1936). Then it went to 13
> wpm - for ALL types of US ham license.

Duh. You just agreed with me again.

> If you know anything about radio history, Morse played a central role
> on the air all that time.

I only know what Jeff Herman has told me.

> In 1951 the 5 wpm and 20 wpm speeds were put back - 5 wpm for the one
> year Novice and the 220-and-up Technician, and 20 for the full-
> privileges Extra, whcih was supposed to replace the Advanced.

So again you agree with me. 5wpm was the entry level.

> In 1952 the FCC changed its mind and gave all amateur operating
> privileges to all US hams except Novices and Technicians.
>
> in 1963 the FCC changed its mind AGAIN and started the changes that
led
> to "incentive licensing". 20 and 16 wpm were the FCC's idea.

Exactly where are my facts faulty? At any time in amateur history, either 5wpm, 10wpm, or 13wpm was the ENTRY level exam. Actually, my facts are faulty and I'll point it out at the end, but you won't like it!

> > When it became the exclusive
> > domain of the amateur service,
>
> Which happened when? A year ago?
>
> >it needs to stay real fast for some reason,
>
> 20 wpm Morse is not "real fast" at all.

Its the fastest ever required by the FCC for the amateur service. It is fast to me and everyone else who is on this side of the exam. It is for many on the other side as well.

> >for some bozos.
>
> I see. If somebody disagrees with you and presents facts and
> experiences that you don't have, they are a "bozo". Right.

The clown that started this thread by threatening us with turning in his amateur license because he had to take a hard morse code exam and today we get to take an "easy" morse code exam IS a bozo. He never did come back to disagree with me so your thesis cannot be tested nor proven. Apparently all the people who told him to go ahead and turn in his license wasn't the answer he expected.

> > > Now it's all history.

No kidding? In amateur years, anyone with less than 20 years is a rank
beginner. I have a mere 14 years in the service and continually get
told by the "experts" here that its OK to work bootleg Frenchmen on 6M
if you got enough seniority.

I'm tired of hearing how good morse code is for me, others like me, the
amateur radio service, and the world. I'm speaking out. Yours is
not the only voice in amateur radio anymore. Get used to it.

Everyone KNOWS things differently. Thats why "eye-witness" accounts are usually hopeless on reexamination.

> You really don't operate HF at all, huh?

Not much anymore. Career, grad school, traveling job, moved family across 3 states, new career, apartment life. Just pretend I'm one of those lapsed license individuals with the vanity 1x2 call that you so admire. I'll pick it up again next fall after I'm in my new home.

> > > > it was doubled all the way to

Nope, thats where most people who get stuck get stuck at. The 9/10wpm plateau is well documented.

I'll tuck that one away and suprise Jeff with it sometime.

> >Then even later it was back to 5 wpm...
>
> For raw beginners and VHF/UHF, where CW was rarely used.

Entry level is entry level. Don't demean the Novice licensees. When
13wpm was the entry level license, they were also "raw" beginners.
I dunno, but maybe its ok in your opinion to ID a repeater with poorly
sent code.

> > > > > > If it was good enough back then when morse was a valid

I know, I know. Denying something on rrap is the same as admitting
guilt. Feel better?

> They are using it because they were forced to learn
> it via the Novice or General entry level licenses.
>
> Nope. They could have stopped as soon as the test was passed.

Many did, or haven't you noticed? I guess all those reports of it in
QST back when CW mattered were false reports.

> I could have stopped using CW in 1970 - but I didn't, because I like
it.

Sure, now that you were forced to learn it. Had there been no morse exam, you probably wouldn't have learned it and probably wouldn't be able to say that you like it 30 years later.

> It's like saying all those folks who run marathons do so because they

> It's EXACTLY what you said.

OK, its your turn to post it, and you wont have to go back to a musty
1919 QST to get it.

> > Let morse
> > code/cw stand on its own merits and allow it to prosper or flounder
> > without government forced support.
> >
> Hasn't been any forced support for any mode for half a century.

Its still forced even if you never plan on using it on HF.

> > The gubmn't hasn't forced PSK31 on
> > anyone but it is such a good idea and such a good mode that it
doesn't
> > need to be forced.
> >

> every day.

I tested in April. I don't recall sitting at a computer with a soundblaster.

> How much PSK31 have you done?

None. I've "done" more cw than any other digital mode in the amateur service.

> > You started this by staking out a lot of spectrum for cw exclusively.
>
> 25%. Also 25% exclusively for digital and 50% exclusively for analog
> phone. On the HF bands only.

Then you agree. You staked out a lot of spectrum for cw exclusively.

> > I
> > realized that it was simple posturing in order to get us "thinking
> along
> > party lines" concerning our comments to the ARRL.
>
> No, it was a new idea meant to solve several problems at once.

A new idea that sounds so familiar. Pretend we are about to receive 300khz on 5mhz. Propose a bandplan. That will be a new idea.

> > Apparently, the idea
> > of cw having to compete in a "free" marketplace scares the hell out of
> > you.
>
> Nope. Not at all.
>
> The idea that some hams might be able to do something you won't sure
> seems to scare the heck out of you, Brian.

No. I just don't have bragging rights. I do other things to keep busy.

> Would you want all campers to have to "compete in a free marketplace"
> at national and state parks?

?

> The idea is that the various modes would have space reserved for them.
> And ONLY those who wanted to use Morse would have to pass a test on it.
>
> Guess even that's too much to ask of some folks.

Which brings us to the faulty facts that I mentioned far, far above. In addition to 5wpm, 10wpm, and 13wpm all being "entry level" exams at one time or another, the original amateur license had no morse exam at all. Amateurs got licensed and if they wanted to operate spark, learned morse in order to use it. The same thing will happen after WARC 2003. If you want to use morse, you'll either download a copy of

magic morse or you'll learn to manually make and break contacts. That should be obvious.

Why do you have to embrace unnecessary government regulation?

Greetings...

I have up for trade a real nice Kenwood TS-440SAT. Looking for a bit 'beefier' rig to use as backup for my FT-920. Will consider any and all trade offers for HF gear. The Kenwood is in very good condition, but has one problem...sometimes the antenna tuner acts a bit flaky and won't tune what the tuner in my FT-920 will. Will include a Kenwood MC-50 Desk microphone in nice condition for the right offer. Also includes original box, manuals, and supplemental info on the rig from INRAD. Oh yes, YK-88 CW filter installed also.f Not really interested in selling this rig, looking more for a trade. Whatcha got to offer?

Tnx, es 73 de N9LXX~~~

JR, I would place more credibility in Phil Kane's comment since he's
a former FCC attorney.

N2BRK wrote:
>I want to run VHF/UHF on my motorcycle.

I mounted a crystal-controlled 2m radio inside an ammo box, with a quarter-wave whip attached to the top of the box; the ammo box itself was securely mounted on a small luggage rack above tail light assembly. I placed a power switch and volume control on the under side of the box, away from curious fingers and the rain. (No power to that switch with the ignition switch off, too.) A cable was brought out of the box and run up to the handlebar -- the cable contained the audio line, attached to a Radio Shack waterproof PA speaker on the handlebar, and the mic cable. I kept a small plastic baggy over the mic to keep the rain out. Everything worked fine.

The 146.88 MHz Diamond Head repeater covers almost the entire south shore of Oahu which is why I used a crystal-controlled rig on the bike -- never had the need to change frequency, never had to open the ammo box.

Note that I used U-bolts to attach the box to the luggage rack in such a way that the threaded portion of the bolts were inside the box, and the box was locked (these boxes contain a hasp to which a locked can be attached). Thus, the assembly would have been difficult for a thief to remove.

The local CB'ers have gotten wind of the 'new' MURS frequencies that have been recently been made available. Wouldn't you know it? The word is spreading fast.
One of the locals has a two mtr. Ham rig he bought at a Hamfest and has opened up...he is telling all his buddies to follow suit and 'get on the air'. Two watts? Heck, they couldn't care less about the power restrictrions! This guy is saying he's gonna put up some beams, get his wife a rig and go for it.
The mess has begun. It will get worse. This clown said, "Nobody gonna enforce it." if he runs fifty watts or more.
I think that the FCC really made a big mistake on this call and it won't be long before these CB'ers begin to screw up the neighboring VHF freqs. with their overpowered and broad-banded outlaw rigs.
The local CB'er was telling his buddies to spend a couple of hundred bucks and buy an FM Ham rig from AES and modify it.
It is already happening. It will get worse.

Yeah, I saw that CBer QSL card too. Also noticed that the actors
kept forgetting to key the rig to talk. And they sometimes talked
duplex too. Ignoring these nits, the plot wasn't bad, maybe a 3 star
movie at that.

Look, I'm not going to sit here and argue with you over this. Your misrepresentation of the facts gave the impression that I was a troublemaker going around posting in "in every group that could possibly be of interest to CBers," in some vague effort to harass CB'ers, which is simply not true. Instead, I have responded to existing threads posted in the ham radio newsgroups (I'm not responsible for where the thread was crossposted to before I joined the conversation).

It's like this discussion. Contrary to your claim that I'm "announcing the
passage of HR2346 with a big grin and wielding it like a club in every group that could possibly be of interest to CBers," I simply responded to a massage I read in rec.radio.amateur.misc. I didn't crosspost this discussion to rec.radio.cb (someone did that long before I joined this thread), and I'm not "announcing" anything, nor am I "wielding it like a club in every group that could be of interest to CBers." To suggest otherwise is a total misrepresentation of the facts (which is exactly what you did).

And again, I go back to what you originally said. You claimed that I was "announcing the passage of HR2346 with a big grin and wielding it like a club in every group that could possibly be of interest to CBers." Again, like I said before, that is a lie. I have only posted a handful of message since the passage of of HR-2346 (counting this discussion), and none of them announced "the passage of HR2346 with a big grin."

And, with that, I have nothing more to say about this. I didn't join this discussion so that I could get into an argument with you about my past posts. Instead, I offered detailed opinion about the enforcement efforts of the FCC (or lack thereof), and the issues surrounding

HR-2346. If you can't offer any ligitimate dispute about what I posted, then don't waste my time with trivia like this.

Kim, we've already discussed this. If you delete newsgroups in a crossposted thread, many of the participants in the discussion will not see your comments, since many are not in the newsgroups you don't delete.

In fact, in an existing thread with an ongoing discussion, it seems a little rude to join in that discussion and then exclude existing participants by deleting their newsgroups.

Of course, if there are a lot of newsgroups listed (especially newsgroups not at all related to the discussion, and where there are no existing participants), then that might warrant some newsgroup editing.

When one makes a decision to use the U.S. mail to harass people, they enter the big leagues, a VERY serious mistake indeed! The U.S. Postal Inspection takes ALL improper use of the U.S. mail very seriously. Anonymous and harassing U.S. mail sent to someone's employer, neighbors, associates, etc. IS traceable. Thanks to information supplied by the U.S. Postal Inspection Service, private DNA testing was performed on the envelopes & stamps used to send harassing mail recently. DNA testing is inexpensive and now available to the general public. The U.S. Postal Inspection Service also supplied information how to store the obtained DNA evidence for future use. Now I wonder who sent that harassing mail to Jeff Herman's employer and other people's neighbors and business associates? Laugh now, for he who laughs last laughs the loudest. You made one of the worst decisions of your life when you decided to use the U.S. mail for illegal purposes.

I would not have a problem with using my dual-band HT with MURS . It's
been modded for out-of-band. Same goes for a 440Ht to use on FRS too.
All you need to do is get the shortest antenna possible and use the lowest
power, and noone will even notice.

>The mess has begun. It will get worse. This clown said, "Nobody gonna

It's going to happen for sure, but they will ruin it for the repsonsible
operators like myself. You can do alot with 2 watts and a good antenna.
Of course the truckers are probably allready using this MURS now anyway.

> When one makes a decision to use the U.S. mail to harass people, they enter the big leagues, a VERY serious mistake indeed! The U.S. Postal Inspection takes ALL improper use of the U.S. mail very seriously. Anonymous and harassing U.S. mail sent to someone's employer, neighbors, associates, etc. IS traceable. Thanks to information supplied by the U.S. Postal Inspection Service, private DNA testing was performed on the envelopes & stamps used to send harassing mail recently. DNA testing is inexpensive and now available to the general public. The U.S. Postal Inspection Service also supplied information how to store the obtained DNA evidence for future use. Now I wonder who sent that harassing mail to Jeff Herman's employer and other people's neighbors and business associates? Laugh now, for he who laughs last laughs the loudest. You made one of the worst decisions of your life when you decided to use the U.S. mail for illegal purposes.

Maybe you can find a friend also interested in learning the code.
The two of you could converse via code, as practice. Set up
two sets of keys and code practice oscillators with speakers in the same
room. Send dirty jokes or whatever, just don't use such on the
air when you do get your license or upgrade.

I usually just lurk in here, but this time I can contribute something.

You might consider the "Code Quick" program from Jerry Wheeler. I recently completed it and it penetrated my thick skull after months of frustration. It makes the Farnsworth program seem like punishment. Not boring at all. It's actually pretty entertaining. He wants an hour a day. I gave him 1.5 to 2 when possible.

Each character is given a sound alike. Example is the letter "Y" which sounds like "Dah dit dah dah" sounds like "Why did I die". Phrases that reflect the cadence of the character. Comes with drill software and such. Well timed breaks too. At first the program seems kind of silly, but it proves it's value when on day 3 you have 100% retention. It really stuck like glue for me.

I'm in no way affiliated with Dr. Wheeler or his company. I just know that in 2 weeks I was copying 5 WPM from nothing with his program. (Copying close to 12 now) It's more expensive than some of the other programs. I suppose it's a "How bad do you want it?" thing.

If your head is as hard as mine, go here:

I suspect a buddy system works best. Find someone else wanting to learn
the code and send to each other. There's some encouragement and
competition involved with two people.

So you're saying that a person has no right to discuss an issue in this newsgroup if they lack proper qualifications? Or the enforcement problem in the citizens band is not the result of many years of failed FCC enforcement? Or that budget restraints were not used as an excuse? Or that some in the FCC are not now seeking more money to expand the enforcement division? Or that people do want to see a greatly expanded enforcement agency in Washington? Or that the 20, or so, existing enforcement personnel can control the estimated 25 million CB'ers? Or that the FCC would not have to hire hundreds of new enforcement agents? Or that this legislation is not a possible solution to the problem?

All of those points were raised in my message, and more. Now, if you can't find something worthy in all that, either you have no defense for your position at all or you want to avoid debate entirely so the existing lack of enforcement in the citizens band is not challenged. I strongly suspect the latter is the real reason behind the attempts by many CB'ers to avoid debate. So what is your reason, Dick?

Look, I don't want to keep trashing Phil, but when he first started talking about this legislation a few months ago, he didn't even know who sponsored the bill. He was ranting about some congressman who proposed similar legislation several years ago and was not even involved with this legislation.

He also fails to note that FCC policy has changed greatly since he left the FCC. For one thing, the FCC was directly involved in the creation of this legislation, and appears to fully support it.

And finally, he keep talking about some jurisdictional issue that simply does not exist. If it did exist, it would have been addressed by lawyers at the FCC, the House, the Senate, or the White House, long ago.

Now, I have no problem if Phil wants to oppose this legislation on a personal level (everyone has a right to do that). But, when he passes himself off as an expert on this legislation, or on constitutional issues (jurisdiction), I have to point out that the evidence simply does not support that. The bill itself mentions the sponsors, the congessional record clearly mentions FCC involvement in this legislation, and there is no evidence whatsoever of a jurisdiction issue.

As is the case with gloming collitch degrees, making marriages work and
sucessful parenting there are no fast tracks or instant gratifications, thus
on a much smaller scale it is with learning the code, they all take WORK,
gawd forbid. Depends on how much effort you're willing to put in vs. how much
value you place on what would come out of your efforts.

Two words of advice: CODE QUICK!

It's silly, it's cutesy, and it STICKS LIKE GLUE to the language center of your brain! Just read the myriads of testimonials available on USENET and in various discussion forums. I challenge you to find anyone who says, "I tried Code Quick, and it was a dud."

In addition, I suggest downloading Morse Code Academy and practicing on randomly generated sample exams.

I only wish there were a "Mandarin Chinese Quick" for learning Mandarin Chinese.

In article <91dquu$4tm$1@iac5.navix.net>, "Fred Hambrecht" <Fred@w4jle.com> writes:

>That honor in modern times is held by the peanut farmer from just South of >me in Plains Georgia. Have we forgot the "malaise" and double digit >inflation rates? Jimmy Carter was the worst!

No way, Fred. Blaming Jimmy Carter for the bad economic times of the late '70s is like blaming the weatherman for the hurricanes.

Here's what REALLY happened:

More than any president except Ronald Reagan, LBJ got the country to do serious deficit spending. LBJ got virtually blank-check funding for the space race, the arms race, the "great Society", and the Vietnam war. Raising taxes was politically unacceptable, so the govt. went into debt like mad. LBJ had so many connections on Capitol Hill and was owed so much by so many there that he got what he wanted. LBJ left a huge national debt AND a pile of ongoing big bucks programs as his legacy.

Richard Nixon inherited all of these financial headaches. The momentum of the space and arms races took a long time to slow down, and the Vietnam war went on even longer. Inflation began to take off during Nixon's administration. His answer was wage and price controls, which simply delayed the problem.

Worse yet, American industry had not invested enough in new technology and research during the '50s and '60s. Foreign competition began to make big inroads in markets formerly dominated by US goods. Some industries, like railroads and natural gas, were so over-regulated that they were not functioning well at all.

It all came to a head when the price of oil doubled in 1973. All of a sudden energy wasn't cheap or plentiful anymore. American industry had a VERY hard time adjusting. Detroit, for example, had a heck of a time learning how to make a good small car. (Remember the Vega and the Pinto?)

All of this caused a domino effect. Higher energy prices affected every industry, and a spiral of inflation began. Jerry Ford, who got the White House when Nixon quit, tried to stop it with an ineffective PR campaign. I well remember "WIN buttons" ("Whip Inflation Now") and TV spots that urged us "let's all be a little less piggy". Huh?

Carter inherited the fiscal irresponsibility of his predecessors - he didn't create it and he didn't make it worse. But when a second OPEC crisis hit in 1979, things didn't get better, either.

Eventually energy prices settled down and the inflationary pressures eased. By then it was the early 1980s.

Where Carter messed up:

- He listened to Henry Kissinger and took in the Shah of Iran. Really bad advice, Henry.

- He banned sales of grain to the USSR after they sent troops into Afghanistan. This hit American farmers harder than the Kremlin. (Afghanistan turned into the Soviet's Vietnam - they lost 80,000 lives there, and in the end lost control of the place. The collapse of the Soviet Union was due in part to that war).

- He couldn't come up with a way to make energy-efficiency sexy for Americans. His approach was reminiscent of Winston Churchill telling the Brits that "I have nothing to offer but blood, sweat and tears..." The British of that time knew the truth when they heard it and muddled through. Americans needed more sugar coating.

Carter wasn't the worst. No way, not by a long shot. LBJ was much much worse - got us into a war that his successor had to deal with, spent money like it was water, set up a welfare state with no accountability, and avoided dealing with the real problems (like energy dependency). Then LBJ ducked out of reelection.

No, that's not quite correct.

> The FCC, or
>whatever it was back then, approached the ARRL with
>the concern that the number of HAMs was becoming
>unmanageable, and wanted a way to 'limit' their numbers.

That's not it either.

Here's the story:

After WW1, ham radio in the USA quickly grew to about 16,000 licensed hams -
and then stayed at that level through most of the 1920s. Being a ham back then
was an expensive and time consuming proposition, due to the high price of
parts, rapid changes in technique, and the primitive nature of the equipment in
use.

Then in 1929 came the stock market crash, and soon after the Great Depression.
There were also new regs decressing the size of the ham bands (40 meters used
to be 7,000 to 8,000 kHz and 20 was 14,000 to 16,000 kHz!). You'd think that
something like ham radio would suffer, but just the opposite happened.
Thousands of folks got ham licenses in the early '30s. The number of hams
almost TRIPLED in less than 5 years, reaching 45,000 by 1934.

Why the sudden growth? One reason was that a lot of folks had more time on
their hands. Another was the development of new parts and techniques that made
building a station easier and much less expensive. Radio had become a household
word in the '20s, and was not a fad anymore.

But the sudden growth brought problems. The written tests for a license had not
changed with the times, and were inadequate. Many newcomers barely knew the
code, but could make it through the 10 wpm enough to pass. Lots of newcomers
learned just enough to pass the tests, then haywired together a station and
went on the air - often wreaking havoc with other hams and other services.

There was also a lot of turnover - up to 40% per year! The newcomers weren't staying.

The FCC (which replaced the FRC in 1934) was very concerned, as was the ARRL. The ARRL BOD suggested that the written tests be improved and modernized to reflect then-current techniques, and the code speed increased slightly to 12-1/2 wpm to insure that newcomers really knew the code.

The ideas was NOT to limit the number of hams - it was to insure that newcomers were more qualified to go on the air.

45,000 doesn't sound like a lot - but you have to remember what sort of gear was commonly used back then, and that most hams spent a lot of time on the air back then - every day. And almost all of them were packed into the 160, 80, and 40 meter bands.
>
>Originally Desoto proposes 12-1/2 wpm, but that was
>changed to 13 to be a whole number and easier to time.

Partly true. The FCC made the change.

Clinton B. Desoto was the man who wrote "200 Meters And Down" in 1936, which chronicles the early days of amateur radio and the ARRL. Good reading - too bad there's no sequel. He mentions the changes, and the reasons for them, in the last chapter of the book.

Note that BOTH the written and code tests were changed - but the changes to the written tests are rarely mentioned.

Two important resources for the code student:

1) Go to the MEGS site:

http://www.joates.demon.co.uk/megs/

and read the wonderful online book about all aspects of code learning and operation. Worth downloading the whole thing and printing out.

2) Check out Morse Academy (shareware trainer) at:

http://www.ah0a.org

Really good, and the price is right!

Quick tips (I can expand on these if you want):

- Train to be an operator, not just to pass the test.

- Practice at least 15-30 minutes/day, every day. Two or more short sessions are often better than the same time spent in one long session.

- Use the Koch/Farnsworth plan (See below).

- Study/practice both sending and receiving. Each helps the other.

- Use any and all available training aids - computer, tapes, CW receiver, etc. Change things so you get used to all sorts of code sources.

- Don't stay at one speed or with one set of characters until you are 100% copy. When you reach 90-95% copy, add characters or increase the speed.

- Don't worry about advanced stuff like a speed key or word recognition at first. Concentrate on getting a solid 15-20 wpm with pencil copy and a straight key first.

- Set up a proper CW station and use it.

- Try a lot of different things. What works best for one person may not be best for another. Some people find a pencil while others do better with a pen. Some find lined paper a help in copying, while others like plain white paper. Headphones are a help to a lot of folks because room noise and echoes are reduced.

- Keep practicing, and keep asking questions!

--

The Koch/Farnsworth method:

Get a code source that can do Farnsworth-type code (Most code practice software can do it). Set the character speed for 18 to 22 wpm, and the text speed for 10 wpm or so. The result will be code that sounds like:

dah.....didididit.....didit.....dididit

rather than:

daaaah.....dit dit dit dit.....dit dit.....dit dit dit

Start out with just two letters. Practice copying until you get to 90-95% correct copy, then add a letter. Repeat until you run out of letters. Add the numbers and characters until you run out of them.

The idea is that the fast character speed lets you hear the character as a single soundgroup (dadadidah) rather than several independent sounds (daaah daaah dit daaah).

Then increase the text speed (which decreases the space between letters) and pretty soon you'll be solid 20+ wpm.

This is the "Farnsworth-Koch" method. It's best used to learn the code from scratch, but is also useful for increasing speed.

Any more questions, just ask.

Sorry, Jim I do seem to be riding your wake. This is the method that got me thru the Extra with the single exception that I did it 4-5 characters at a time.

Group 1: A, W, J, 1
Group 2: N, D, B, 6
Group 3: R, F, P, AR, Period
Group 4: K, Y, X, C

The idea is to learn to copy behind as well as add to the vocabulary. As computers were not available, I used Uncle Wayne's 20+ tape. Apparently the FCC lady had seen the exam copied in five-letter groups before.

news:3A3B2BC4.8ABF5DFD@sccoast.net...

> Look, I'm not going to sit here and argue with you over this. Your

You've nothing to argue about. Below is an example of your CB enforcement fetish and willingness to deliberately troll CB-related forums with questions only an imbecile would honestly ask. Again.

Message-ID: <3A27619E.22EAE3F6@sccoast.net>

I was just wondering something about HR-2346? Since this allows local legislators to write laws based on FCC regulations, will that include the forfeiture amounts spelled out in the FCC regulations? In other words, are we talking about local courts handing out fines up to $20,000 for each rule violation? If so, that will certainly encourage local law enforcement officers to go after CB'ers with a vengeance (there are very few $20,000 speeding tickets).

> It's like this discussion. Contrary to your claim that I'm
> "announcing the
> passage of HR2346 with a big grin and wielding it like a club in every
> group that could possibly be of interest to CBers," I simply responded
> to a massage I read in rec.radio.amateur.misc. I didn't crosspost this

You responded to crossposted discussions, and further, I claim you took advantage of the crosspost situation to troll. If you disagree, please tell me what other possible reason could there have been to post the foolishness above. This post alone shows the degree to which your enforcement fetish encourages you to entertain hopes of cruel and unusual punishment visited upon the slightest violation (intentional or not).

> And, with that, I have nothing more to say about this. I didn't join
> this discussion so that I could get into an argument with you about my
> past posts.

Nor did I. You denied the existence of posts which were only a corollary to my statements, I proved them, and you are now backpedaling and attempting to shirk responsibility for what you had originally denied to exist. You showed lack of credibility on this issue better than I ever could.

>Instead, I offered detailed opinion about the enforcement
> efforts of the FCC (or lack thereof), and the issues surrounding
> HR-2346. If you can't offer any ligitimate dispute about what I posted,
> then don't waste my time with trivia like this.

Very well then, instead of waiting for you to shed your spankard's skin, become a man and apologize for calling me a liar, I'll take you up on your offer to legitimately dispute, dissect and expose the idiocy of this "detailed" opinion of yours, and re-examine the enforcement fetish and unreasonable bias causing you to uphold it. There's more than one way to skin a spankard. See my response to your original post.

I don't see how 10wpm is a factor in "wreaking havoc" with other hams
and other services. It must have been inadequate understanding with
rules, theory, etc.

> There was also a lot of turnover - up to 40% per year! The newcomers
weren't
> staying.

Yet it was the same with the Novice license later on. Same with the
Tech license as we're about to find out.

> The FCC (which replaced the FRC in 1934) was very concerned, as was
the ARRL.
> The ARRL BOD suggested that the written tests be improved and
modernized to

Yes, very good idea.

> and the code speed increased slightly to
> 12-1/2 wpm to insure that newcomers really knew the code.

So there is a reason that the entry level license required 13wpm code.
In a 100% code environment. Today, operators have lots of choices.

> The ideas was NOT to limit the number of hams - it was to insure that
newcomers

Well yes, but.... Beware of Normally Open (NO) vs. Normally
Closed (NC). The contacts in your image are illustrated
upside down from the usual presentation (NC up, NO bottom.
A SPST (single pole, single throw) will have 2 contacts
rather than 3 (typically NO, but *could* be either way) and
2 coil wires for a total of 4.

Woody

Hello Dick,

Both methods work, but Koch found that starting with just two letters and
adding only one at a time was quicker and easier for most people. You only have
to deal with learning one new thing at a time.
>
>Group 1: A, W, J, 1

Koch did his work in the 40s, but it got little widespread recognition. There
was an article in QST some time in the 1970s that outlined various methods -
Koch beat them all.

> Apparently
>the FCC lady had seen the exam copied in five-letter groups before.

We had ol' Joe Welsh, FCC examiner here for many years.

I learned by listening to other hams on the air. One hand on the pencil and one
on the receiver (two-tube regenerative). Higher speed came from operating and
listening to W1AW code practice.

HAMFEST/COMPUTERFEST CALENDAR 2000 - ILLINOIS
last updated November 13, 2000

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (630)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale, Rick D. Wilson, John Wass KA9QJX, Tom Harker, and ARRL for providing some of the information.

DECEMBER 2000

Dec 3 (Sun): Wheaton, IL - Giant Computer Show & Sale (see below). DuPage County Fairgrounds, County Farm Rd. & Manchester Rd. 9:30 AM - 3 PM. Adults $6, children $2.

Dec 16 (Sat): Grayslake, IL - Computer Country Expo (see below). Lake County Fairgrounds Exhibit Hall, Rt. 120 (Belvidere Rd.) & Rt. 45. 4 miles west of I94. Admission $6, or $5 with discount coupon available at WebSite.

Dec 17 (Sun): Orland Park, IL - Giant Computer Show & Sale (see below). Orland Park Civic Center, 147th St. & Lagrange Rd. 9:30 AM - 3 PM. Adults $6, children $2.

JANUARY 2001

Jan 28 (Sun): Cicero, IL - WCRA Mid-winter hamfest 2001. Hawthorn Park on S. Laramie Avenue, Cicero, Illinois Note change of venue 2 blocks south of 2000 hamfest! The new location, Hawthorn Race Park, is much nicer than the Odeum. Cleaner, brighter, better food. Tickets $5.00 in advance with 4 stubs. Parking is free. Advance tickets from Kurt F. Rubin, kb9rto@arrl.net and John E. Wiley, K9FID, johnwiley@lucent.com

COMPUTER SHOW NOTES

Computer Central computer shows are held at the College of DuPage, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 847-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm. See http://www.computercentralshows.com web site.

Giant Computer shows are held by Micro Media, Inc. Shows are usually held at the Orland Park Civic Center, 147th St. & LaGrange Rd., Orland Park, IL or at the DuPage County Fairgrounds, County Farm & Manchester Rds., Wheaton, IL. Admission is $6. Show hours are 9:30 AM - 3 PM. To get on the mailing list or get more information, call (708)974-3123. See http://www.giantcomputershow.com

Computer Country Expo is Lake County's largest computer expo. The event is held on designated Saturdays from 9:30 AM to 3:00 PM. This show features computers, supplies, games, parts, software, accessories, CD-ROM, monitors, diskettes, printers, keyboards, modems, disk drives, cables, expansion boards, services, etc. Lake County Fairgrounds, Route 120 (Belvidere Rd.) & Route 45, in Main Exhibit Hall Building #1=9720,000 sq. feet. For a show map, exhibitor info, and discount coupon, visit the web site at http://www.ccxpo.com.

3291. NY/NJ/PA Repeater Listings with Long/Lat info

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-17 16:16:12 UTC
From: Chris <c279m@yahoo.com>
Message-ID: <gF5%5.862$uz1.49115@news1.news.adelphia.net>
Source record: 97609

Does anyone know were I can get a good size NY/NJ/PA repeater list that contains the long/lat info on the repeaters? What I'm looking to do is input these sites into my map program that works with my GPS so I can see which repeaters I can hit during my travels. A few days ago I asked about a program that does such a thing but since I didn't get any replies, I figured it doesn't exist. Any info, web sites, etc would be helpful.
Thanks,

Chris KC2GLX

You might be a stupid stumpjumer if......

Herbie suckered you into a cash donation.

You have a computer on lay away at Wallyworld.

You think Santa has effs working for him instead of elves.

You tell everyone you have Weeenduzzz 98 on your computer
instead of Windows 98.

Your outgoing faxes have beer stains on them.

Your CD-Rom makes a great beer can holder.

Your computers are worth more than all your cars combined.

Your printer runs at 10 words per minute, which is our reading
speed.

You put Dodge truck parts into your RAM slots.

Your monitor is up on blocks.

You lawyer dumped you when you couldn't keep up
your time payments to him.

You pay cash at motels and hope your junker will
make the trip.

You have prepay cell phones but can't afford them.

You wonder why there's no more activity on the repeaters,
it never occurs to you that everyone now has cell phones.

Ho Ho,

Bye Herbie!

Typically, Anonymous wears women's panties when he posts....LARGE
women's size!

> See the fine WorldRadio article by KC8JBO on aluminum foil headwear
for

Additionally, you can catch Anonymous' articles on
alt.fan.pedophiles.crossdressers for his many experiences molesting
underage boys.
Isn't that right, George?

Note: Follow-ups set to just rec.radio.amateur.misc

Dwight Stewart <stewartx@sccoast.net> wrote:
> Kim, we've already discussed this. If you delete newsgroups in a
>crossposted thread, many of the participants in the discussion will not
>see your comments, since many are not in the newsgroups you don't delete.

The usual procedure is to re-direct the thread, using the header's
"Followup-To:" line to just the group you're posting/reading, and
advise the readers that you've re-adjusted that line:

"Follow-ups set to just rec.radio.amateur.misc"

That will allow your comment to go to all NGs in the NG line one last
time, but any follow-up after that will appear on just r.r.a.m. Anyone
participating in the locked-out NGs will then be advised that if they
wish to continue participation, they'll need to come over to the NG
to which the thread was re-directed. (Brian Cantor was one smart
cookie when he wrote the Usenet software!)

I did that with this post; everyone on all 3 NGs will see it but any
follow-up to my comments will appear just here on r.r.a.m; my first
line above advises everyone of that.

>And why was 13 wpm later considered the absolutely slowest speed
> considered acceptable.

Because at 10 wpm, one could still pass the test by counting
individual dots and dashes, while 13 seemed to be that magic
point in which one had to read ..-. as one single entity
rather than two dots, a dash, and a dot.

Well, 5wpm is just about 'memorization' speed, so you
have to ask yourself if you want to learn it right for long
term CW usage or do you want to learn it as a goal.

This falls back to the strategy that the best tool may not
always be the best tool for the job.

If you want to learn CW with the idea of being a fast
CW operator long term and being a wrist wiz on the
bands, then there are a number of proven techniques
out there to get you to 10, 20, or more wpm speeds
but they won't get you to 5wpm as fast as some
wrong methods.

In addition, there are a number of different methods
out there and some or none may work with you. Asking
for the 'best' is like walking into a room full of preachers
from different faiths and asking which one is the 'right
one'.

On the other hand, if your goal is to just satisfy the
5wpm legal threshold as required by the current rules
and regulations, there's a lot of simple methods that
will get you there fast, probably faster than most of
the 'better' methods.

But be aware, these 'quick starts' usually leave
'plateaus' in code speed that you will bump into later.

Now comes the question, and you have to decide
what your long term goal is going to be. CW can
be fun, but it's not for everyone. Unfortunately,
you don't usually find out how fun until you already
have gone through the effort to learn it, and now
your stuck with that path. Breaking bad habits from
the 'quick start' methods can be a lot of work.

On the other hand, if all you want is HF privileges
and you just need that certificate....

YOU make the choice, don't let others talk you into
what THEY say you 'should' do.

When you are practicing, always receive at a speed somewhat faster
than you can handle.

If you can receive it 100%, then you will never improve.

>similar legislation several years ago and was not even involved with
>this legislation.

The ORIGINAL version of the bill was introduced in the Senate
by Senator Feingold about two terms ago and sailed through
the Senate. It did not emerge from committee in the House.
This was repeated last term with the same result. In the
present term it made it through because this time House
sponsors took the Feingold Bill and introduced it concurently
as the HR Bill that it is known as in this discussion.

The only differences between the original Feingold measure and
the one that finally made it through bouth houses and was
signed by the Prez are the exemption for the holders of valid
FCC station licenses introduced in the second version of the
Senate bill at the urging of the ARRL and the provision which
requires probable cause for enforcement against a commercial
carrier vehicle, no doubt introduced upon pressure by the
trucking industry to guard against real or perceived arbitrary
enforcement actions.

>He also fails to note that FCC policy has changed greatly since he
>left the FCC.

For the worse.

There are more and more people coming into power positions
within the agency who know not and care not what proper
radio regulatory enforcement is and why it is necessary.

Riley is a rare throwback to the "old days".

>For one thing, the FCC was directly involved in the
>creation of this legislation, and appears to fully support it.

The non-enforcement people surely do. It's easier to let
someone else do one's distasteful job than to shoulder the
responsibility and demand and get the resources to do it

properly.

>And finally, he keep talking about some jurisdictional issue that
>simply does not exist. If it did exist, it would have been addressed by
>lawyers at the FCC, the House, the Senate, or the White House, long ago.

If the FCC didn't speak up, none of the others could care.

And as I said, it's easier to let someone else do one's
distasteful job than to shoulder the responsibility and demand
and get the resources to do it properly.

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2MFY, KF2HC, WB2YQH/WB2RAJ & The 59(9) DX Report, NG3K, W3UR & The Daily DX, N4ZC, WA4FFW, WB4PVT, N5VT, N6RT, WA7OBH, K8YSE, DJ5AV & DX News Letter, DL1YFF, EA5KB, G3MII, OE7SEL, OK1DTP, OZ 50 MHz DX Bulletin, PY2YP, VE9DX, VK0MM, ZP6CW and ZS6DX for the following DX information.

NEWS FLASH OF THE WEEK.....
3Y0C, BOUVET ISLAND (2000 brings one more rare entity!). A press release from Mac, WA4FFW, informs OPDX of the following: "Chuck, N4BQW, of Palmyra and Kingman Reef fame, will begin a 4 month operation from Bouvet Island. Operations will commence on Saturday, December 16th at 2000z on 14.195 MHz. Chuck has been a granted license with the callsign 3Y0C. This callsign was issued some years ago but was never activated according to officials, therefore, it was reissued to Chuck for this operation. Chuck arrived on Bouvet on December 11th aboard the 'MV Polarstern'. Landing was with the aid of a helicopter. Chuck is part of a scientific team consisting of 4 Norwegian Scientists and himself. He is the only Ham operator. He will be involved in conducting some experiments; however he will have plenty of time to operate. Joe, N4OL, the Operations Equipment Manager, states Chuck will be running an ICOM 756 Pro and an ICOM PW-1 solid state linear. He has vertical antennas for 160-40 meters and will use beams on 30-10 meters. They are not all in place at this time but should be up in a week to 10 days as weather and work permits. Pilot station, Gene, WJ4T, states that Chuck will have a generator for approximately 12 hours a day and will use large banks of batteries when the generator is not available. Gene reports that Chuck will have some other responsibilities on the Island but will have plenty of time to operate. Gene also reports that the temperature is 0 degrees C with winds at 50 MPH. He also reported there have already been winds in excess of 70 MPH since the team landed. Therefore antenna erection has been and will continue to be difficult. WA4FFW is the QSL manager for the operation. Mac asks that no cards be sent until an address is posted sometime in early January 2001. There

will be no computer logs. Logs will not be in hand until after Chuck's return to the U.S. sometime in April." Chuck has been quite active over the past weekend on 14195 and 21298 kHz. Bruce, WD4NGB, states for 3Y0C propagation, check the Web page: http://www.qsl.net/wd4ngb/3y0.htm

3B6, AGALEGA. Han, HB9BXE, (from a press release by HB9CRV) states: "The supplementary work caused to the postponement of our expedition has now been completed. All the expedition material except those items which have been returned to suppliers are stored safely at Basle. We can now concentrate our efforts again on the preparations for the May 2001 expedition." The 3B6RF crew for next year's DXpedition has a few changes. For business reasons their financial manager Joe, HB9AJW, has had to cancel his participation and Cedric Baechler, HB9HFN, was added. The crew now consists of: HB9BQI, HB9BQW, HB9BXE, HB9CRV, HB9HFN, HB9JAI, HB9JBI, 3B8CF, 9A4TU, CT1AGF, DL3KUD, DL6UAA, F6HMJ, G3KHZ and NK6F. The crew is still looking for a good CW operator. The scheduled operation is to take place on May 5th for 14 days. OPDX InterNet Subscribers will receive the latest press release as an additional bulletin. Watch their web site for updates at: http://www.agalega2000.ch

4S, SRI LANKA. Ananda, 4S7NB, located in Colombo was active over the weekend on 20 meters around 14180 kHz between 0100 and 0230z. Meanwhile, Nelson, 4S7NE, near Colombo, has been active on 30 meters (10108 kHz) between 2300 and 0030z.

4U, UNITED NATIONS HQ. 4U1UN made a surprise appearance on the air Friday and Saturday. Operator was Mohammed and was active on 3793 kHz after 0000z.

A4, OMAN. Sadiq, A41KJ, was heard this past weekend on 21241 kHz around 1145z. QSL via N5FTR.

A9, BAHRAIN. Gus, K4SXT, active as A92ZE, has been very active on 160 and 40 meters. Check around 1832 and 7003 between 0130 and 0400z. QSL via: Capt. Julius Gostel Jr., PSC 451, Box 1198, FPO AE 09834, USA.

ANTARCTICA RECORD? Nobert, OE1SNW/MM, is cruising with a sailboat around the Antarctica Continent which will take about 100 Days. He is trying to set a one man record for his class of boat. He is also active on Ham Radio on 14313 kHz (reportedly around 1600z). More details and information about his daily position can be found on the Web site: http://www.icelimit.at This Web page is very interesting with photos and details on Nobert and his yacht "Oase III". Also, SSTV pictures of his trip can be found on the Web page: http://www.icom.at

ET, ETHIOPIA. Claudio, ET3VSC, was active on 80, 40 and 12 meters this past week. Check around 7030 and 3788 kHz between 1500 and 1530z and 24967 kHz after 1300z.

HZ, SAUDI ARABIA. HZ1AB was heard this past week on 12 and 10 meters. Check 28460 kHz around 1215z and between 24960 and 24970 kHz from 1330 to 1430z. There was also a QSN from Europe stating that HZ1AB was on 3508 kHz at 1544z. QSL via K8PYD.

IOTA/LIGHTHOUSE OPERATION. Pete, MM5PSL, will be operating from the Sumburgh Head Lighthouse on the Shetland Islands (EU-012) during the "Amateur Radio Light House Society" (ARLHS) sponsored Christmas Lights operation from December 18th until January 2nd. The ARLHS number is SCO-232. The following information has been received from Pete: "The following are times broadly available and I will be on the air as much as possible but obviously can't operate all the time.
December 18th - 1800-1900z
December 19th - 2200z through to 0900z December 20th
December 20th - 2200z through to 0900z December 21st
December 22nd - 1000z until 1300z
December 23rd - 2200z through to 0900z December 24th
December 27th, 28th, and 29th - 1200z until 2200z
December 31st - 0900z until 2000z
January 1st - as and when I can??
Janaury 2nd - most of the day till close of play."
The 20 meters will be his primary band, and he will be on or near the usual lighthouse frequency, 14270 kHz. Pete's QSL Manager for the operation will be longtime IOTA and lighthouse chaser WA7OBH: Lee Graves, 4341 SE Satinleaf Place, Stuart, FL 34997 USA.

IOTA NEWS.....
OC-135. Steve, P29BI, will be active from Bougainville Island in his spare time for the next 2 months. Activity will be on 20 meters SSB only. QSL via VK4EJ.

PIRATE ALERT. A station signing 4W1CW on 12 meters at 1034z was active saying QSL via N7RO. This is SLIM. "The Daily DX" also reported that Dick, N7RO, knows nothing about this guy.

QSL INFO AND NEWS.....
CORRECTION. There is a correction to a Web page URL address in last week's bulletin. Nob's, JF2MBF, ZK1NDK (Penrhyn Atoll, N. Cook Island) log is now available on-line log at: http://www.jm1szy.com/zk1n/index.html (The "l" was left off on html.)

Doug, N6RT, reports that the log for A52XX is now available online at: http://dx.qsl.net/logs

Hans, DL1YFF, reports that QSL cards for the 7P8AA operation has arrived, and Fritz, DL7VRO, is now answering them. Direct cards will be answered directly, the rest via bureau. Any questions can be sent to Fritz via his E-mail address: dl7vro@qsl.net

The "OZ 50 MHz DX Bulletin" reports that the E4/JM1LJS Palestine QSLs have been accepted for DXCC. Hide, JM1LJS, reports that his 6m operation was also recognized by the DXCC.

Pepe, EA5KB, reports that he is the QSL Manager for the following stations: TG9AMD, TG9AAK, CO3JR, CO2FN and CM2FN.

Nigel, G3TXF, reports that he is now waiting for the J3G cards to come from the printers. There should be a mailing soon after Christmas.

Tom, K1KI, was the operator of J38DX, and he is also the QSL Manager. He reports that it might take a few weeks until he gets the cards printed for J38DX. Tom states, "If you don't mind waiting longer I will QSL 100% via the bureau as well." For direct requests, send to: Tom Frenaye, K1KI, P O Box 386, West Suffield CT 06093

Brian, KF2HC, reports that the operators from the FS/W2JJ operation would like to thank everyone who worked them between December 5-12th and during the 10m contest. They had a great time putting FS into your logs. It was especially rewarding when someone thanked them for "a new one". Brian states, "We didn't get the 160m antenna up until Sunday afternoon but we did manage to operate 160m a few hours Sunday and Monday evenings. The only 6m activity we heard was from South America and a few other Caribbean islands. Mike worked 37 grid squares on 6m during our stay. We made special efforts to work 12m and 17m and we hope we gave a lot of you a new one for those bands. Several hams reported the address we were giving for W2JJ (a club call) differed from what a certain call book CD showed. The correct address for W2JJ is: P.O. Box 244, Allamuchy, NJ 07820, USA. If you choose to QSL direct please keep in mind the US postal rates are going up in January 2001. Via the bureau is OK, too. On behalf of the entire FS/W2JJ team and our families Have a Healthy and Happy Holiday Season!"

Caser, PY2YP, reports that the PS0S logs on-line now show the status of your QSL card. Stop by to see if your QSL has reached the PS0S QSL Manager at: http://www.cwsp.org.br/srchps0s.html

QSL SM2T via SM2EZT. Torvald, SM2EZT, states that he uses SM2T in contests. The Swedish contest callsigns are "2x1". To see the offical Swedish contest callsigns, check the Web page at:
http://www.sk3bg.se/contest/speccall.htm
By the way, Torvald states that if you hear him as SM2EZT in a contest, then it is EazyTest (EZ T)....HiHi.

Doug, ZP6CW, informs OPDX that his wife, ZP6CU, is acting as his QSL Manager (Box 73, Caacupe, Paraguay). She is also the QSL Manager for Ross, CN2UN, and his operation from Western Sahara as S07UN. She now has the 1980's logs of the 9L1GG operation of about 10,000 contacts and will honor any requests for Greg's operation there. She will also act as the Manager for the current operation of ZP6GG.

S2, BANGLADESH. Junji, JA7KXD, will operate S21YT again from December 27th, 1800z to January 2nd, 1759z. Details on his activity were not mentioned. QSL via Junji Ogawa, 2-3-51, Kimachidori, Aoba-ku, Sendai-city 980-0801, JAPAN.

S2, BANGLADESH. Carl, SM6CPY, has delayed his trip here which was going to take place during December and January. The delay is due to the local flooding. He now hopes to be active as S21YD during February 12-19th.

S7, SEYCHELLES. David, OK1DTP, will active on CW/SSB with callsign S79OK now through December 26th. He will visit the islands of Mahe and Praslin, IOTA AF-024. He will use an IC-706 MKII (100w) and 40m delta loop. QSL

via OK1TD.

SPECIAL EVENT. Frank, N5VT, reports that he will be active as a special event station to celebrate the "Battle of New Orleans" from January 1-10th (2001). Activity will be on CW/SSB/RTTY and PSK31 with operations on 80/40/30/20/17/15/12/10/6 meters. A special award is available if you work him on 80-10 meters. QSL via N5VT w/SASE.

SY, MOUNT ATHOS. Monk Apollo, SV2ASP, continues to be active as SY2A until the end of the year. He has been keeping people happy on 20/12/10 meters. Watch around 14205, 24963 and 28456 kHz between 1330 and 1530z. QSL ONLY direct to SV2ASP.

T8, PALAU. Look for Hiro/JK1FNN and his XYL Mie/7L1MKM to be active from here as T88HA and T88MY from December 30th through January 3rd. Activity will be on 80-10 meters CW/SSB. QSLs via JK1FNN.

V31, BELIZE. "The 59(9) DX Report" reports that Gisela/DK9GG and Gerd/DJ4KW will be active as V31GW from January 9th through February 20th. Activity will be on all bands including 160 and 80 meters. Klaus, DJ4SO will join them on January 16th thru February 20th. QSL via DJ4KW.

VK0MM QRT. Alan, VK0MM, is permanently QRT from Macquarie Island as of 1330z December 16th. Alan states, " Thanks to everyone for all the QSOs and E-mails over the thirteen months... it's been great fun. All proceeds from the VK0MM QSL process will be donated to Camp Quality, an Australian charity that provides care for children with cancer and other terminal illnesses; please dig deep when you mail your QSLs. The QSL address will be announced in January on: http://www.geocities.com/vk0ld/qslinfoX.html

XV & XU, VIETNAM AND CAMBODIA (Change of plans!). Rodger, N4ZC, informs OPDX that Mauro, IN3QBR, reported to him the following changes from the OPDX.489 bulletin. Mauro states that there is no flight from Phnom Pen to Vientiane until December 24th. So, Mauro will be on the air now as XV7AAZ from December 20-23rd while waiting for the flight. Rodger adds that Mauro will be visiting him in February. He plans to take Mauro to the Carolina DX Association's meeting and the Orlando hamfest during that month. Rodger states that he will have all logs and cards for XW3QBR, XW3ZNR and XV7AAZ to hand out at the hamfest. Normal QSLing is via IN3ZNR, but those going to the Orlando hamfest can save postage and IRCs if they wish to get their cards there. Mauro will be at Rodger's "ARRL W4QSL Bureau" booth space all day Saturday, February 10th.

ZC4, UK SOV. BASE AREAS ON CYPRUS. Steve, ZC4BS (also G4KIV ZD8SB N5ZFR), reports that the ZC4 club station should be up and running as ZC4ESB (Eastern Sovereign Base). The station will be operated by Steve/ZC4BS, Des/ZC4DW and Graham/ZC4GK. They will be active for the next 3 years, and hopefully a little longer on all bands 160-6 meters and on all modes. Des and Steve are also keen contesters and will be participating in most contests.

ZK1, SOUTH COOK ISLANDS (Also 3D2). Look for Dan, N6PEQ, to be active a few days from Fiji signing 3D2CQ until December 20th before moving onto

South Cook. Once there he will signi ZK1PEQ between December 20th through January 6th. He plans to travel to Raratonga and Aitutaki using a FT-847, dipole and vertical on 80-10 meters (and possibly 6 meters). QSL via N6PEQ. For more details, check Dan's Web site at: http://www.dxer.com/n6peq

ZS6, SOUTH AFRICA. Rudi, ZS6DX, who has been active in the CQWW CW and the ARRL 10 Meter Contest as well as general DXing, reports that he will be more active over the next few weeks on 17 and 12 meters. QSL via: R. Venter, 11 Bushbuck Lane, Monument Park, Pretoria, 0181, South Africa.

>
>I don't see how 10wpm is a factor in "wreaking havoc" with other hams
>and other services.

It was the fact that they had just squeaked by, and couldn't really copy
on-the-air.

>It must have been inadequate understanding with rules, theory, etc.

That was a major factor. Many couldn't even stay in the band.

>
>> There was also a lot of turnover - up to 40% per year! The newcomers
>weren't
>> staying.
>
>Yet it was the same with the Novice license later on.

For most of the useful life of the Novice, most of them upgraded before the
year was out. When high dropout became a concern, the answer was a longer
license term (1967) and "Novice Enhancement".

>Same with the
>Tech license as we're about to find out.

Nobody really knows. And post-1991 Techs have always had all VHF/UHF privs.

The important question is: WHY the drop outs? In may cases, it's due to things
like high equipment costs, anbtenna troubles, and competing interests. Folks
who got Techs and Tech Pluses so they could have "honeydew" comms now have
cellphones. End of interest in ham radio.

>In a 100% code environment.

Wasn't 100% code even then. Lot of amateur 'phone as early as the '20s.

> Today, operators have lots of choices.

Yup. And a huge percentage of them choose Morse on HF/MF. More than all of the
keyboard/digital modes put together.
>
>> The ideas was NOT to limit the number of hams - it was to insure that

>> 40 meter bands.
>
>Is this the 1st hardwiring of the CW/Phone separation?

No. That goes back to the early '20s. 'Phone got its own subbands way back -
but no 'phone on 40 until 1953.

While we're on the subject, note that the digital/RTTY modes are NOT allowed in
the HF phone subbands. Phone gets government support and protection from those
modes - but CW doesn't.

Note also that SSB is an old, obsolete, dying mode. The military and
commercials are giving it up in droves. Broadcasters never used it. Pretty soon
the only ones using it will be hams, cbs and fishing boats. Yet the ham tests
are full of questions about SSB.

Me too. Told the FCC how to do it in my comments. So did many others.

Won't happen, though. FCC wants the exams to be as easy as possible now. They want to attract the freeband/cb folks to a service that requires a license. That way, the FCC can control them better.
>
>I'm also 100% behind revising "that other part" of the exam to reflect
>modern methods. ;^)

Many modern hams use Morse. 'Specially this one.

True, Jack..I heard or read of some guy started people out at 40 wpm
then backed down to a lower speed......as they began to improve.
Unbeliveable, huh?

The Morse requirement for a Ham license is now only five words per
minute.
1) Memorize the sound of each letter. Do not think of or picture dots
and dashes. Only think of the sounds of the dits and dahs.
2) Learn just three or four letters at a time until you have learned
the whole 26 letters of the alphabet.
3) Memorize the sounds of the ten numerals and the punctuations(- , . ?)
4) Once you really can remember the sounds of each chartacter you will
be able to copy Morse at five words per minute, with not too much
practice. Use a good computer program, such as Morse Academy. Get your
speed up as high as you can, but do not attempt to go above ten words
per minute before taking the 5 wpm exam. Some folks find it hard to
copy very slow CW after they master higher speeds. You might find that
it is difficult to go faster than about ten words per minute at first,
as this is normally a barrier for most beginners and usually takes a
considerable amout of practice.
5) When you are ready take the Element 1,2,3 Ham exams and get licensed
as a General Class Radio Amateur.
6) If you enjoy Morse code, (Some do...Some don't) keep practicing.
When you get your ham license you can make CW QSOs on the air. There
are some very patient hams who will be willing to QSO with you at any
speed.
There are others who aren't very patient...unless you are calling from
a rare QTH.

I hope that this has been of some help. The other suggestions in this
thread are also very good.

73 es
Good luck.

Mike, all the above supposed some higher knowledge of morse learning theory than your average prospective Novice posessed. Luckily today with the no-code license you get exposure to choices before going for a coded license.

Perhaps we need a de-programming camp in the swamps of Florida where we can do a data dump on those 5wpm tapes. Every time we start counting dits and dahs, we get bitten by a fire ant.

And now its back to 5wpm. So I guess the government doesn't think it's necessary to get past counting dits and dahs. Perhaps soon, the government will rule that counting dits and dahs is no longer relevant.

We'll see. Besides, I think I froze my fingers out there today and may never be able to send a dit again.

I'm sure he's right. I'm one of the net controls for the maritime
mobile service net, and we get folks with marine licenses on 14.300
now and then checking out equipment. Official net policy is to
not communicate with them, but many net controls comment
that they must have an amateur license to transmit on that
frequency and then we move on. THis changes however if there's an
emergency.

> line to just the group you're posting/reading,
> and advise the readers that you've re-adjusted
> that line:

The problem with that, Jeffrey, is that some people might not have access to all the newsgroups the thread was crossposted to. For example, it was mentioned that a previous thread was crossposted to a couple of trucking newsgroups. Since my server doesn't list those newsgroups, I would be excluded if the conversation was moved there.

Or, another example, when I was in Italy I could only access one of the ham radio newsgroups here in the U.S (rec.radio.amateur.misc). Because of that, not a week went by without somebody telling me I was posting to the wrong newsgroup. For example, I would post a question about antennas, and someone would almost always say that I was posting to the wrong newsgroup, with the not-always-polite suggestion that I try rec.radio.amateur.antenna instead.

Of course, this would result in the routine "I'm in Europe and have access to only a limited number of newsgroups" explination message. Sadly, this was not always enough. More than once I was told if I could not post to the "correct" newsgroup, then I should just stay out of the newsgroups period.

Because of my experiences, I never criticise anyone for posting to any newsgroup. And when it comes to crossposted threads, unless there is a darn good reason (for example, the thread is crossposted to a number of newsgroups that are obviously not related), I think it is far better to just leave the list of crossposted newsgroups alone.

And, with that, I have to back out of this discussion. I've got some work to do before the start of the new year, and I had better get at it. Take care, Jeffery.

No. 97.111(a) makes some allowances for "cross-service"
communications, such as Armed Forces Day tests, but there
is no such allowance for Ham-to-CB under non-emergency
conditions.

Jim didn't say their speed wrecked havoc -- he said their haywired
homebrew equipment wrecked havoc.

>>So there is a reason that the entry level license required 13wpm code.

13 seems to be the magic plateau in which one can no longer count the
individual dots and dashes to pass the exam. One has to recognize the
entire character.

>>In a 100% code environment.

My goodness, phone began as early as 1910! Move up a few years to WWI
and we see the U.S. President making a phone broadcast to the Germans
on one of their Morse wavelengths, urging them to surrender. I'm in
Nevada and my history books are back in Hawaii so I can't give you the
exact details right now, but the author couldn't emphasize enough how
dumbfounded the German operators were; I believe the Alexanderson
Alternator was used to make this history-making phone broadcast.

>> Today, operators have lots of choices.

True, yet CW usage is about the same as phone on HF; at times you'll
hear more CW QSOs than that of phone. I bet that really irritates you!

Talk about a mode being specific to a particular service, Jim, how about
spectrum- and power-wasting AM? Yet the broadcast and aeronautical
services will be using AM for a long time to come.

Darn, Phil, why do you wait till now to respond with some substance to the things I've said? I've got work to do and have to back out of these discussions (so pardon me if I'm a little slow to respond to future comments).

Anyway, I'll agree with you that this legislation is not the best solution. And, like you, I'd rather see the FCC handle this situation. But, what I've been trying to say all along is, in the current environment in Washington, is that realistic?

In many government agencies, budget cuts and downsizing has become the holy grail. With this in mind, do you really think that the FCC is going to get more money, and more staff?

At the same time, complaints from consumers has reached an all-time high. Yes, you and I know this is because of the flood of new electronic devices in the home (often poorly designed to handle radio interference), but try telling all that to some consumer (or some congressman) that can't record his favorite show with his new VCR.

In the end, this leaves the FCC between a rock and a hard place - complaints and budget cuts, or complaints and downsizing. Put yourself back into the FCC today, with this situation. What would you do?

In the end, it appears the FCC decided to cut its losses, to throw a radio service it didn't particularily like anyway to the wolves, and to concentrate more heavily on the radio services it could handle.

Its a dirty deal. Its an unfair deal. And I'm sure a lot of CB'ers feel betrayed. But, at the same time, many would argue that the FCC was

spending way too much of its time, and resources, on this one radio service anyway (one radio service out of many).

Anyway, its a done deal now. The goal now has to be to keep an eye on local legislators to make sure they handle this situation properly. It may be years before all this settles down to some level of normalcy again.

3335. WINRADIO: Why Does Everyone Hate It?

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-18 07:03:13 UTC
From: Ron Boutwell <boutwellron@hotmail.com>
Message-ID: <91kcrg$2tg$1@nnrp1.deja.com>
Source record: 97504

I do not own a WinRadio, but I have considered picking one up. First, however, I would like to know why everyone hates it. Magazines give it rave reviews. On the surface it seems like a good deal. I like the fact that to make it a PC internal they were forced to physically shield the receiver. That should also provide some valuable shielding from other electrical interference (or so I would assume). But here in the forums I hear people saying they wouldn't "...touch it with a bargepole.". However, they never explain why they feel this way. I would appreciate a little ellaboration shice it is a sizable investment and one I am considering making. :-)

Thanks!

Sorry, Bill, I forgot to mention: I'm in Finland, and our FCC requires us to negotiate with the neighbors, which is a good thing. I have installed small things like ferrite chokes and filters in their homes and they're quite happy to live next to a ham. 73, Gary, oh8mfh

No matter how well shielded the radio part is teh main pickup path will be the computer noise comming in via the antenna . Also I have not looked it over but is there a way to connect the output of the radio to the sound card so it can be used to decode some of the digital signals ? Or is there a rs232 output of the radio so one of the Hamcom interface units can be hooked up to do the same thing ?

Perhaps thats what he meant. If thats what he meant, then learning
morse at a mere 10wpm was entirely satisfactory back during the heyday
of morse activity.

> >>So there is a reason that the entry level license required 13wpm
code.

Not anymore. The FCC says we only have to count dots and dashes (5wpm).

Apparently there's a sound technical reason for using AM in the aeronautical band. There's an economic reason for using it in the SW broadcast band. Only Rush Limbaugh and G-Man listeners appear to be buying expensive C-Crane radios, so I suspect there's an economic reason in the US AM broadcast band as well. Stereo AM was tried. No one bought it.

Source record: 97513

I've owned one for a little over a year now and really do like it...

The cards audio output simply loops back into the soundcard "line in" on the outside of the case. This could have been thought out a bit better, but I guess this was done for simplicity. There is no rs232 port, but you can plug your "Hamcom" type device directly into the audio output and connect to a com port as usual. Again I'm sure this was done to prevent the problems that would arise from trying to add another comm port and it's associated interrupts to every PC that gets used for this application.

There are of course some birdies, but these are present in every scanner I've owned. I'm sure there are some cleaner models on the market in this same price range, but the ease of use of this receiver and the associated whistles and bells make it worth the price in my book.

I especially like the ability to import an entire database directly from the FCC or Percon web sites into one of the freeware database managers and make up a new scan list from it. I live in a rural area, but the FCC still reports thousands of licenses for my county, and thousands more for adjacent areas. I would never take the time to enter them all manually into a scanner just to see what was available for listening to on each individual frequency. This makes it simple.

There are also some freebee scanner recorders available that make recording transmissions to a .wav file simple and straight forward. Ever wonder what happened while you were asleep last night? Just leave the PC on and record it as a .wav...

I also realize that the features I mentioned are possible on a lot of today's scanners through various interfaces, but there is something to be said for the all in one package concept...

Nope! I goaded them! When I thought up that commercial, I knew it would
drive them nuts. It took about 10 minutes on a SUNDAY night to concoct the
text, refine it and e-mail it to one of the Omega Radio Network professional
voices. I had the finished product for use on my show the next evening.
I'll run it again tonight. Lots of fun.

Well, again, I've been scanning those frequencies here at home for a week now
(not counting my travels), and have been using ReCall to record the activity,
and have heard NO truckers or other "newbie" users on the frequencies......I'm
curious as to what part of the country the original report came from.......

There is such a program! See GCMWIN at
http://hem.passagen.se/sm3gsj/gcm.htm

GCMWIN is FREEWARE. You can add anything to great circle maps like prefixes
etc.

I made a mistake. YPLOG does not have an AZMUTH map. But VE6YP does have
a GREAT FREEWARE AZMUTH map program for Windows.

See http://www.nucleus.com/~field/
Or www.qsl.net/ve6yp

In particular see http://www.nucleus.com/~field/azmuth/

Like most programs it is a big download. Another GREAT FREEWARE program

Learning code at 10wpm, twice the current criterion for the Amateur
Extra license is "giving up" on yourself? I guess if I were a better
Christian I would nail myself to a cross, too.

Sorry Dixie, I'll never measure up to your outdated standard. But I'll
never let you run me out of amateur radio either. But you're welcome to
keep trying. I think thats all that keeps some of you OFs kicking.

AMSAT-NA's N2WWD provided ANS the following preliminary Keplerian elements based on a single radar pass. More accurate orbital elements should follow from NORAD in the near future -- following a second radar pass that should provide time and geometric distribution of the tracking data.

AO-40
1 26609U 00072B 00352.42798611 .00000000 00000-0 00000-0 0 115
2 26609 6.3033 237.3129 8126708 194.7923 102.4478 1.27093349 581

Satellite: AO-40
Catalog number: 26609
Epoch time: 00352.42798611
Element set: 11
Inclination: 6.3033 deg
RA of node: 237.3129 deg
Eccentricity: 0.8126708
Arg of perigee: 194.7923 deg
Mean anomaly: 102.4478 deg
Mean motion: 1.27093349 rev/day
Decay rate: 0.00000e+00 rev/day^2
Epoch rev: 58
Checksum: 266

Stay tuned to ANS for additional bulletins from AMSAT, the official source for information on AMSAT OSCAR-40.

[ANS thanks AMSAT-NA and AMSAT-DL for this information]

So while you essentially ran yourself out of ham radio by your own ignorant stubburn attitude for most of your adult life you accuse someone else of being responsible for your faults and deficiencies. Right, we got it.

Not to worry Brain, you'll got no uninvited flak from me. I just responded to your continued inane drivel in which you continually blame everything on someone else. Oh well, that's the modern way. You be a thouroughly modern fella.

At least with MURS they won't be showing their asses to the entire world when the skip is rolling in like the C.B.er's do. It's probably just a matter of time before FRS goes to hell as well once people figure out a way to boost the power and add antennas with it. Time will tell.

It depends on whether you are looking at an electronic, or electrical
diagram as well as from what part of the world.

We used to get some really strange ones in industry

Skip doesn't roll in. Skip refers to the distance ("skip zone") that
a skywave signal misses (skips over) from the point that it leaves
Earth to the point that it returns after being refracted from the
ionosphere:

ionosphere
/\
/ \
/ \
/ \
* *
xmtr rcvr

<---skip zone--->

A W6 might be in QSO with a W1, yet a W0 in between might not hear either
side of the QSO due to being in the skip zone.

>KU4UV

On VHF, the best distance one can expect to get is line of sight,
whether he uses 1w or 100w.

No, just detected it with NORAD radar. They say it is in one piece - this
puts the disintegration theory to rest.

Next step is to wait to Dec 21st and Dec 25th for possible automatic
reactivation. After that they consider using the rest command (but they dont
want to be hurried into trying that till they have given the on-board

time-outs a chance to work.

VHF? Line of sight? Don't believe that one. Tropospheric effects are comming into play at this frequency, sporadic E propogation exists, and at the 100 watt level, you're looking at 2,000 mile distances (although not often). Hmm ..

I think its biggest limitation is that it is dependant on the PC. How long do you plan to keep your PC? Are you sure this device will be compatible with future PC hardware, and OS, upgrades? If not, are you prepared to set aside a dedicated PC just to handle this device once you do upgrade to a newer PC (that is perhaps not compatible)?

Is it still a bargan if you have to set aside a dedicated PC? Now you have the cost of the device, and the cost of the dedicated PC, involved in the total price.

Furthermore, what happens when that dedicated PC, you set aside to handle this device after upgrading, breaks down a few years from now? Will you be able to easily find a replacement PC that is compatible with this device (both OS and hardware)?

And finally, what happens when you want to sell it in the future (you want something new)? Assuming that future PC's (hardware or OS) may not be compatible with this device, will you have to sell the dedicated PC and device together simply because nobody has a computer that is compatible with the device anymore? Will this lower the resell value of your investment?

The clear advantage of a separate radio is that it is not dependant on anything else except a power outlet. You can still run many external radios with computer software, but if that software ever stops working (not compatible with a new OS, for example) the radio itself still functions on its own (year after year).

Why is this suddenly cross posted? Up until now, this thread was only on RRAM. Is this like trolling? You all can't stir up enough shit? Just because some hammie says "CB" in a post, we have to see it? 16 posts before this one were only seen on RRAM. What's wrong Jeff, bored in paradise? I've been to Honolulu. I've seen the roving bands of native Hawaiians on mopeds. I rode a moped around Diamond Head. A major city in paradise is still a major city. I preferred the Big Island and Maui over Honolulu even if I was only a stone's throw away from Pearl Harbor and Wikiki. Well happy holidays anyway.

3375. NEWBIE HELP: What do you recommend for...?

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-19 08:25:30 UTC
From: Rubblehead <banktank@ix.netcom.com>
Message-ID: <6r6u3tk4dkq85s7vas6132h6p395e7rnkl@4ax.com>
Source record: 97542

I don't know anything about this stuff so I'm turning to this group for help.

Here's the issue. I fish a lot, sometimes in some fairly remote areas, and I do worry that if anything ever happened, I'd have no way to contact the outstide world for help. Also, when I fish closer to home (within 10 miles), I'd like to be able to keep in touch with the 'base camp', as it were.

So here's the question: what is the best method of keeping in touch with the outside world? Forget 'cell phones.' Half the time they don't work in the areas I'm in and the other half the time they don't work. Is there a portable radio system you can use to both receive and broadcast that is strong enough to (a) keep in touch with a base camp (and what unit might the base camp need?) (b) have enough 'broadcast power' to reach local civilization in the event I get in trouble? My preference is that I'd like both units (home and base) to be portable and battery powered.

Thanks to the group in advance.

Hummmmmmm are these the Motorola MDT's if so you will need the system
freqs the MDT id from console of public saftey group. This info is
not for public. This is done with MDC1200 and MDC600 in some cases.

Best wishes

They already have. It's called "go to the next hamfest and buy a used dualband handheld that's been modded for extended TX coverage." For slightly more $$$ than a high-end Motorola Talkabout, they now have 5 watts & external antenna capability on both FRS and MURS.

5 watts not enough? Time for "go to the next hamfest and buy a used dualband Mirage amp for less than $100." Now, they've got 50-100 watts to raise hell with. And unlike CB, no huge 102" antennas or alternator-killing 1KW amps are needed. How convenient!

>Haven't been on the bands for very long, have you Sonny?

Almost 25 years.

See Page 17 of the ARRL Antenna Book (Tenth Edition) for an
explanation of "skip zone" -- the region on the earth that
a sky wave skips. My diagram above comes from that page.

Apparently you, too, misunderstand that term.

>>On VHF, the best distance one can expect to get is line of sight,
>>whether he uses 1w or 100w.

>Somebody want to explain ducting to this old boy?

Tropo ducting is not a normal day-to-day phenomenon. I'm surprised
you don't know that.

>Haven't been on the bands for very long, have you Sonny?

It's really funny to think that someone of your supposed
qualifications doesn't understand "skip zone" as outlined
in the ARRL Antenna Book. The term doesn't not refer to
the "skipping" of radio waves across the sky! Radio waves
do not "skip" -- they only refract when passing from one
medium to another -- just like light.

To assist you in understanding what's apparently a new meaning
to you for an old term, here's a tutorial from the League's
Antenna Book, Page 17, 10th Ed.:

"...For some distance, then, depending on the critical angle,
there is a region about the transmitter where the sky-wave
signal will not be heard. This "silent" region, extending
from the limit of the useful ground wave to the distant point
where the sky-wave signal can first be heard, is called the
skip zone, because all signals skip over it. The skip zone
is indicated by the skip distance in Fig. 1-8."

Here's a sketch of that Figure 1-8:

ionosphere
/\
/ \
/ \
/ \
* *
xmtr rcvr

<---skip distance--->

>Jim Weir, VP Eng. RST Eng. WX6RST

...but who doesn't know what "skip zone" means. That pretty much
distroys any credibility you have on here.

Horse-hockey. I regularly (once a week sked) talk to my friends in
Duluth, over 150 miles distant, on 144.250MHz using horizontal
polarization (no, we don't use a repeater).

That's great, Hans. Tell us the ASL elevations of the antennas.
Line-of-sight between two points can certainly reach 150 miles,
as you can prove to yourself using our old friend D = 1.41*sqrt(H).
And let's not forget special circumstances such as knife-edge
refraction. But what works for you is not a given normal situation
for everyone else. (Are you telling us that everyone can expect
to transmit 150 miles on a MUR stubby antenna?)

Now just to be sure, why not provide the callsigns of these "friends"
so we can confirm these QSOs?

You all have missed the key word, "expect," in my statement above. VHF propagation anomalies exist, such as knife-edge refraction when a mountain peak is between the two stations, tropospheric refraction during a temperature inversion, tropospheric ducting in the tropics and over large bodies of water, sporadic E (unpredictable and short-lived, and occurs 1/10 as often on 2m as on 6m), Auroral, Auroral E (rare at 2m), and meteor scatter.

Can one "expect" any or all these phenomenon to consistently exist on a day-to-day basis? Of course not. Let me quote from the ARRL VHF Manual: "Radio waves travel in straight lines unless forced to do otherwise. In some respects, VHF waves are less easily reflected than waves of lower frequency, so consistent VHF communication with low power tends to be essentially local in character, covering only slightly more than line-of-sight distances."

Get your face out of that ill-informed "manual" and get on the air to
see what is being done in real life.

VHF SSB'ers routinely (as in "consistently") communicate far beyond
line-of-sight without benefit of exotic propagation modes or monster
amps/antennas. Here in the midwest, daily communications on 150-mile
paths, with simple yagis at 40 feet, driven with desktop rigs (50W or
less) are so common as to be unremarkable. The CW guys down around
144.075 consider 150-miles as "local".

Brian,

Unless there's something really amiss or they change the law, you'll be eligible for Social Security in 2020 (but your benefits will be reduced about 26%). And you'll be eligible for full benefits in early 2024.

Of course we all should be socking some away in an IRA/401K/SELP plan (any and all that apply).

3403. Cell phones not linked to cancer

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-19 23:41:38 UTC
From: wa2ise <wa2ise@my-deja.com>
Message-ID: <91ornh$pk4$1@nnrp1.deja.com>
Source record: 97571

AP news:

Cell Phones and Cancer Not Linked

CHICAGO (AP) - A study of people who used cell phones for an average of less than three years found no evidence the devices cause brain cancer.

The research does not answer the question of whether longer-term use is dangerous.

The study, funded by the industry group Wireless Technology Research and the National Cancer Institute, appears in Wednesday's Journal of the American Medical Association.

The study of 891 people did find a slightly increased risk for a rare type of brain cancer, but the researchers said it was not statistically significant.

While they acknowledge longer-term studies are needed, the researchers said the overall results should reassure the more than 86 million cell phone users nationwide.

``We feel confident that the results reflect that cell phones don't seem to cause brain cancer,'' said epidemiologist Joshua Muscat, a scientist at the American Health Foundation who helped lead the study.

Unlike regular telephones, handheld cell phones contain an antenna inside the receiver, which puts the user's brain close to the electromagnetic radio waves the antenna emits. Since cell phones were introduced in the United States in 1984, conflicting data have emerged from safety studies on animals and humans.

The Food and Drug Administration has said there is no evidence that the phones are unsafe, but it has joined with the wireless industry in sponsoring research on the devices. Some cell phone makers have also started disclosing their products' radiation levels.

The new study, co-written by Dr. Mark Malkin of Memorial Sloan-Kettering Cancer Center in New York, involved phone-use questionnaires given to 469 men and women ages 18 to 80 with brain cancer and a 422-member cancer-free control group.

Cell-phone use was slightly more common among the cancer-free participants, though average cell-phone use for both groups was under three hours monthly for less than three years.

The amount and duration of cell-phone use were not related to an increased brain cancer risk except for a type of neuron-cell tumors called neuroepitheliomatous cancer. Of the 35 patients with these rare tumors, 14 - 40 percent - used cell phones.

``An isolated result like that can occur entirely due to chance,'' said Russell Owen, chief of the FDA's radiation biology branch. He said the overall findings are in line with previous research and ``certainly not cause for concern.''

Professor Henry Lai of the University of Washington, whose animal research linked cellular phone signals with cell damage in rat brains, called the study ``very preliminary and inconclusive.''

``Since most solid tumors take 10 to 15 years to develop, it is probably too soon to see an effect,'' Lai said.

Man oh man. I admire creativity and this one, albeit disrespectful, is
a thing of beauty. A bit of comic genius shows through. Brilliant
satirical stuff. Congrats to whomever wrote it.

Oh come come, you rightwing scab. For eight years you and your birdbrains picked on Clinton, his wife, Chelsea, his aides, his friends, his cabinet, his brother, his mother and his cigar smoking grandma Tallulah and you get bent out of shape by this work of art? It's damn funny and clever too fool and you must admit that GW did not overwhelm the American viewers with his intelligence during the debates. He was elected because the public was sick and tired of scandal, real or concocted. Furthermore political satire, be it pro or con Bush, BELONGS right here because of the name flame-fest and if you can't take it, then get the hell off and settle onto a needlepoint forum.

Ooops, you're right. Dick will be happy to hear that I'll take up
learning high-speed code in early 2024. Thats almost 3 years earlier
than my initial projection. If that doesn't make him happy then he
needs more fiber.

My own experience agrees with Hans'. Secondly, if you're going to pretend to have done any heavy VHF use, then learn the difference between DIFfraction and REfraction. What you have referred to as edge refraction is actually edge diffraction - very common in hilly and mountainous terrain.

VHF propagation is very seldom optical line of sight with edge diffraction sometimes helping, but with atmospheric refraction often extending the range well beyond the optical horizon. The VHF Antenna Manual explains such things in detail, and offers nomographs and formulas for calculating your station gain, because the simplistic geometric formula you gave elsewhere is only a first order approximation. Geometric propagation models seldom agree with wave propagation models in a realistic environment, and wave propagation models come closest to observations.

Hans was trying to tell you that VHF users are aware of the pessimistic nature of geometric models by virtue of their own experience.

Never argue with experience. You'll just look foolish to those of us who have accumulated it.

Actually, the manuals aren't too bad. Jeff is simply not reading the advanced chapters.

But then, someone who doesn't know the difference between diffraction and refraction, and someone who apparently hasn't operated non-repeater VHF isn't to be taken too seriously.

My experience agrees with yours, even when operating in the past from the very hilly terrain of western Pennsylvania. 10 watts of A.M. into an 11 element, horizontally polarized Yagi was more than sufficient to maintain reliable contacts with stations 110 miles away from me and with a hill apparently blocking the path in that direction.

The ARRL VHF handbook I used made it quite clear why that kind of operation was possible once you plugged the correct numbers into the correct places. It also made it quite clear to me why appliance operators like Jeff would be quite baffled by such a reality. (He probably hasn't found the part about station gain yet.)

I used Nu Morse (http://www.nu-ware.com/), it's windows based and very configurable. I combined it with the tapes from Gordon West, and last weekend was able to pass my 5 WPM code test (passed my general theory too!). Practice twice a day 20 minutes at a time, and if you get the least bit frustrated, walk away. Relaxation is the key.

Of course, I was real high strung when I took the test, and didn't get near the letters I'd done in practice, fortunately the VEs were still using multiple choice code tests and I was able to get it that way.

Now that the stress of the tests is over, I think Morse might actually become fun. That was the part I didn't care for, I got real stressed out having to learn something that I felt under normal circumstances might have been fun to learn, in my own time.

By the way, I was told next year (Jan 1) the price a VE group can charge rises from 6.65 to 10 dollars.

Good luck,

Robert, KG4FGN /AG

I had exaclty this setup and got into EME after hearing some stations with it. You will be able to copy stations with this type of set up and 200-300 watts. You will not do much better than that. I eventually took my satellite system down to put up an array for EME after the getting a taste of it

Just the facts, M'am...But if thats the way you see it, don't you suppose that depends on whether or not you demand more?

I had hoped, even expected, that once you got all you "wanted" you might settle down and just be a ham instead of a hopeless horses patootie, but I see that was evidently too much to ask of one who kept himself so deprived for so long. Gotta have someone to blame all that on, I guess.

3416. My Frequency

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-20 05:16:50 UTC
From: Trebb@webtv.net
Message-ID: <14990-3A4040C2-11@storefull-242.iap.bryant.webtv.net>
Source record: 97437

Walking into the shack, you savor the coming communications. Your ham buddies will soon be there. Taking a seat before your spread of equipment, this is the time reserved for them--and ham radio. No kids, pets, telephone calls, spouses; no interruptions.

Throwing the big switch, you see the lights come on. You hear the audio. If you're like most, Donald Duck is quacking or a base impresario is modulating. You check your digital dial for that sacred frequency. A comforting feeling settles in when you're there, like those memories of returning home on leave from the armed forces.

This is the frequency on which you've been talking for so long. Near and dear, it's the one that everyone of your group has been gathering on for years. But this time things are different. Some strange voice is on there, communicating with another strange voice. You're disappointed, then steamed.

Can you fathom, all these years you've been using this frequency and these strange guys don't have a clue. Surely they should know better. So you get on and tell them where to go.

What's wrong with this picture?

Consider: You don't own the frequency and cannot expect others to know or defer to your impending use of it. To all who act otherwise, please see the light.

Well, you gotta admit that Gore beat him on military skills. AlGore
learned how to operate a typewriter, while the best that Dubya could
manage was a supersonic interceptor.

The topic is MURS, whose users will be using 1-2 watts on FM with rubber
flex antennas. Attempting to make these folks believe they'll be able
to communicate over a distance of 150 miles is an outrageous lie.

Jim, name-calling doesn't deflect the fact that you don't know
the definitions of "skip," "skip zone," and "skip distance."

Hold on now. Gore dropped out of divinity school VOLUNTARILY because
he couldn't imagine himself being a crackpot Jesus freak bible thumper
all his life. On the other hand Bush went to Yale because of daddy's
influence and graduated Yale thanks to daddy's influence and became
Prez. thanks to daddy's influence and brother Jeb's hanky panky down
there in the Sunshine State. If you think GW can match Gore's IQ
you're sadly mistaken HOWEVER without a doubt GW has it way over Al in
"street smarts" and with the proper advisors, he has the potential to
do a nice job and I HOPE HE SUCCEEDS, honestly.

shared these priceless pearls of wisdom:

-
->Jim, name-calling doesn't deflect the fact that you don't know
->the definitions of "skip," "skip zone," and "skip distance."

I know it dead cold, Jeff. VHF-RF and antennas is how I've made my living in engineering for the past forty years. I teach it in college, three semesters a year. However, I also know from being on the air for the same amount of time the colloquial use of the word "skip" and don't need a preachment out of your error-laden references.

Ezat:

"Bang-for-the-buck" the TS-430S is a great deal. It's 100 watts, all mode, all bands with a transverter port, digital synthesized, very good sensitivity, etc. I've had 3 over the years and am using a TS-450S now as my primary rig.

Construction is medium grade. Chassis and covers are metal, but the boards are cheap phoenolic sometimes with bad thru-hole vias, especially in the power amplifier section. All are easily repairable and not too common.

Technically, other rigs have more elaborate design architectures, the results of which would probably be subtle to the casual amateur (IMD, dynamic range, synthesizer noise, etc.). My experience has shown that the more complex rigs have more to break in them, especially as time passes plus you may be paying for specs that you may not notice.

I think the TS-430S had about the right mix of simplicity vs function. Most sell for $400 or less. The Icom IC-735 sells for about $450 +/- and provides an excellent alternative with icom support (something that Kenwood has been lacking for the past couple of years).

See you on the air...
73,
Woody AK2F

Hi all,

The new Veron afdeling Waterland clubstation website is up and running for a couple of days now.
All information is in Dutch except for information on two awards you can apply for, The Waterland Award
and the Polder Certificaat 2000 Award. Our clubcall is PI4WLD. Please take a moment and take a look at our website.
We'd really like to know if the award info is good enough for non-Dutch ham's and if it is easy to access for all of you?
Our URL is http://www.qsl.net/pi4wld

Thanks and 73' de PE1NVF (webmaster).

3438. 100BaseTX and RF Interference

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-20 18:39:22 UTC
From: Birken Vogt <vogt@oro.net>
Message-ID: <3A40FCDA.214260A3@oro.net>
Source record: 97455

I am thinking of networking 3 computers together with a 100BaseTX system. I would like to know what, if any, effect my HF or VHF emissions might have on the network cable. The cable will run between 2 houses through the air though not terribly near to any transmitting antenna. I run about 100 watts on both frequency ranges though I might bump HF to 1000 sometime, or I might not. Anyway, all I really need to know is if RF gets into the line what it might do.

Probably many people are getting bent out of shape because it is an old song, they have never heard it, and so they can't put it to the music in their head and laugh at it. I voted for Bush and I thought it was darn funny too.

I am also 21 years of age....

I think I read all the responses and none of them talks about
the Koch Method. I won't say it is fun, but it does seem
like the way to learn code. The short version is that
you learn code at high speed by forcing your brain not
to translate the dits and dahs but to hear the unique
sound of them. This is done by starting you out with only
2 letters. You can learn 2 letters at 15 wpm can't you?
Then when you got those 2 down rock solid you add only one more.
Then get it down solid and so.

Check out the complete details at:

http://www.hfradio.org/koch_1.html

and there is a free java application for the method at

http://www.vmeng.com/minow/MorsePractice/MorsePractice.html

Good luck!

3445. Using spy stations for CW practice? was: Re: any ideas on HOw to learn Morse quickly??

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-20 19:15:11 UTC
From: Quequeg@quahog.com
Message-ID: <slrn9425pc.fr.Quequeg@daystar.capecod.net>
Source record: 97462

I hope to be taking my first ham radio exam soon, and want to specialize in CW. I'm up to abt 12 wpm now, and want to eventually be able to send and receive at least 25 wpm. Anyway, I found this CW station on 13419 sending coded groups at abt 13? wpm it seems (can anybody confirm this?), and copied it for a few minutes. I often copy the w1aw 18 wpm bulletins with some success.

Q?: Is there any evidence that copying coded groups can increase your speed because of the randomness?

Q!...

>

Hans, let's note that SSB isn't apparently an allowed mode on the MURS frequencies. I also note that decent FM receivers make capture effect a real benefit during band openings on most VHF frequencies, since in general, one signal will have sufficient signal strength to in effect capture the receiver. That's not true with CW or any form of AM. Let's also be honest, in general if you're truly looking for signals on SSB or cw, you're not going to be relying on your squelch either. I've only occasionally worked more than line of sight with a rubber duck antenna, and anyone setting up a repeater on VHF is subject to DFing, meaning at the least that the FCC confiscating non type certified stuff is possible. If the FCC actually wants the service to work, then it is going to have to drastically enforce its rules in the beginning, and just the fear of losing money on MURS gear may deter some behavior. One of the reasons CB got its sort of unregulated feel was that all too many of the folks using it had little fear of being found out.

New on the Website :
Clips from the OTR Encyclopedia
Jack Benny Contest
January Schedule
OTR Chatroom
Photos & Sounds
Voice Chat

Clips from the OTR Encyclopedia :

Every show on our schedule has linked to it exerpts from The OTR
enyclopedia. Not only do you get to listen to the
shows, but you get to read about their history, air dates and times, and
little known tidbits about the show.

An Example :

Lux Radio Theater
Old Time Hollywood
Tuesday Night at 9:00pm E.S.T.
From The Encyclopedia
of Old Time Radio

Facts About The Show

Broadcast History : October 14, 1934 - June 30, 1935, Blue Network. 60m,
Sundays at 2:30 from New York.
Lever Brothers for Lux Soap.

July 29, 1935 - June 28, 1954, CBS. 60m, Mondays at 9 from New York
through May 25, 1936; from
HOllywood beginning June 1. Lux Soap.

September 14, 1954 - June 7, 1955, NBC. 60m, Tuesdays at 9 from
Hollywood. Lux Soap.

Hosts : John Anthony, fictionalized as "Douglass Garrick," 1934-35;
Cecil B. Demille, June 1, 1936 - January
22, 1945; transistion hosts including Lionel Barrymore, Walter Huston,
William Keighley, Mark Hellinger, Brian
Aherne, and Irving Pichel, most of 1945; William Keighley, 1945-52;
Irving Cummings, 1952-55.

The Lux Radio Theater was the most important dramatic show in radio. It
had the biggest stars, the highest

budgets, the most acclaim. It had a full hour and, during its heyday, Hollywood's most prominent film director
as host. It had an austere sound, almost solemn. As Tune In noted in 1943: when Cecil B. DeMille opened the
broadcast with his weekly "Greetings from Hollywood, ladies and gentlemen," it almost sounded like "This is
God, speaking from heaven."

The show had arrived in Hollywood in 1936, luring Marlene Dietrich and Clark Gable to its microphones and
drawing an audience that was estimated as high as 40 million people. It had arrived just ahead of the mass
migration of stars and shows from New York and Chicago, staked its ground, and stood off all challengers to
the throne. Lux was power on a scale that even movie people found intimidating. This was not a show to be
indulged, perhaps, when shottings schedules permitted : when The Lux Radio Theater called, shooting
schedules were abandoned. Entire movie companies stood idle while stars rushed off for radio rehearsals. A top
star could collect $5,000 for a 60-minute appearance, but the power was far deeper than that. Producers knew
that when a film was dramatized on Monday night, it automatically translated into big box office.

At least 50 people were required for each broadcast. Louis Silves's orchestra alone numbered 25. There were
often 20 or more speaking parts, and when technicians were added, the crew overflowed the stage. Each play
was a five-day commitment, the first rehearsal coming on Thursday with a table-reading of the script. The
serious rehearsals began on Friday, with a two-hour session at noon, an hour-long lunch break at 2 P.M., and
more readings in the afternoon. On Saturday there were readings with sound effects. On Sunday the orchestra
was integrated. Two dress rehearsals were held on Monday, the first at 10 A.M., recorded on transcription so
that the director could hear the show as it would play to the listening audience. The final dress came at 7:30, to
work out any remaining rough spots. The broadcast went on live at 9:00pm.

Near the end of the run it was estimated that Lux had gone through 52,000 pages of script, 496 stars, 1,467
supporting players, 18,667 music cues, and 22,667 sound effects. Longtime soundman Charlie Forsyth was
equipped with a Lux soundmobile, containing sophisticated recording equipment for capturing authentic
sounds as he traveled during summer breaks. Forsyth developed some innovative manual effects as well-among
others, being able to make the clocing of a briefcase latch sound

exactly like a car door clicking shut.

Fred MacMurray and Loretta Young headed the "most numerous appearances" list of stars, with 26 and 25 roles respectively. Others often heard were Claudette Colbert(24), Barbara Stanwyck(23), Cary Grant(22), Dom Ameche(21), and Brian Aherne, Ray Milland, and George Brent (20 each).

With dozens of shows on our line-up, here is your chance to learn the intimate details about them!

The Jack Benny/Sonicbox Contest

Do you have the iM_Tuner, but can't afford to get the Sonicbox hardware? Well here is your chance to get the whole package, valued at around $100.00, for free! All you have to do is tune in on Sunday nights at 7:00pm EST and listen to that weeks Jack Benny Program. If you are the first person to e-mail Adora at Phoesho@Home.Com with the date of that particular program, which will be annouced prior to the program, then you will win a free Sonicbox! It's that easy! If you are the winner, you will be notified either the same night or on Monday that you have won. We will ship out your Sonicbox that week, and you'll be listening to over 800 stations with the ease you have while watching television! So tune in each Sunday night at seven for The Jack Benny Program and maybe you will be the lucky person of the week to win a Sonicbox!

Hardware features:

Includes: Remote Tuner, Base-Unit Transmitter, Receiver and software CD.

RF Remote Tuner works through walls.
High-quality 900 MHz stereo audio
Add receivers to play audio on multiple stereos around your house.
Play audio on a number of compatible devices including wireless headphones and speakers from vendors including Advent, Jensen and RCA.
Add headphones to pager-sized portable receiver, and listen to iMTM audio anywhere!

January Schedule of Shows

Welcome to our January broadcasting schedule.
Starting on January 3rd, tune in for these shows at these times!

Sunday Nights

7:00pm - 7:30pm EST : The Jack Benny Program
7:30pm - 8:00pm EST : Amos 'N Andy
8:00pm - 8:30pm EST : The Fred Allen Program
8:30pm - 9:00pm EST : Six Shooter

9:00pm EST : Les Miserables
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Monday Nights

7:00pm - 8:00pm EST : The Aldrich Family
8:00pm - 8:30pm EST : Escape
8:30pm - 9:00pm EST : The Bing Crosby Show
9:00pm EST : Les Miserables *Repeat of Sunday*
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Tuesdays Nights

7:00pm - 7:30pm EST : You Bet Your Life
7:30pm - 8:00pm EST : One Mans Family
8:00pm - 8:30pm EST : The Haunting Hour
8:30pm - 9:00pm EST : My Favorite Husband
9:00pm EST : Lux Radio Theater
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Wednesday Nights

7:00pm - 8:00pm EST : Inner Sanctum Mysteries
8:00pm - 9:00pm EST : The Magic Island
9:00pm EST : The Campbell Playhouse
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Thursday Nights

7:00pm - 8:00pm EST : George Burns & Gracie Allen
8:00pm - 8:30pm EST : The Adventures of Superman / Guiding Light
8:30pm - 9:00pm EST : Our Miss Brookes

9:00pm EST : RE-LIVE THE LEGENDS :
Listen Each Week In January For An OTR Cary Grant Episode

10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Friday Nights

7:00pm - 8:00pm EST : Fibber McGee & Molly
8:00pm - 8:30pm EST : The Bickersons / Chandu The Magician
8:30pm - 9:00pm EST : House of Fear
9:00pm EST : Phillip Marlowe
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Saturday Nights

7:00pm - 7:30pm EST : Quiet Please
7:30pm - 8:00pm EST : The Clock
8:00pm - 8:30pm EST : X-Minus-1
8:30pm - 9:00pm EST : Dragnet
9:00pm - 10:00pm EST : All Star Western Theater
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

OTR Chatroom

Come and chat with us in the OTRADIO chatroom on dalnet! There are
always people in here ready to chat about any
OTR on your mind. Also, need any otr shows to enhance your collection?
This is the place to find them. There are a lot
of long time collectors who browse their way through the chat text in
this room!

PHOTOS & SOUNDS

New photos of Jack Benny, Bing Crosby, and lots of other OTR performers.
Also, in the description of each show,
you'll get a picture of the stars who appeared regularly in that show!
As for the sounds, we have Red Skelton currently
on display, as well as the ORIGIONAL PEPSI radio commercial!

VOICE CHAT

CSRO VOICE CHAT IS HERE! With this chatroom you don't need to type
anything! Just talk into your microphone
and let all here your voice! Great for those of you who are slow typers
or just hate your keyboard!

3450. AO-40 element set #12 (NORAD)

Newsgroup: rec.radio.amateur.misc

Your certainly welcome to keep the message for what ever purposes you deem necessary. Your first defeat will come in 2 years.

You folks have no idea how much the Al Gore antics has energized the Republican party. Did you not get the big picture when you say Republicans demonstrating on the streets? Unlike their union counterparts and welfare recipients, they are not given the day off for purposes of "supporting" the Democrats.

Democrats may have an opportunity to come close if they spend the next two years educating the illiterate dregs that were bussed to the polls and sufficient funds are collected for cigarettes to entice the homeless. As I was told by an old colored gentleman "I knowed dos Republicans had ta cheat, me an da ras' of da folks in my church voted two an free times and da still won"

You could have very easily typed that message without the racial
overtones. But you chose, in true Republican fashion, to show
your "true colors" so to speak!

Hey Randy....read what I said. Not what you think I said.

Yeah I know he went to Vietnam. According to the press that is. But
ya know something? I was at BienHoa and LongBinh, and I never heard of
the 20th Engineers. Again according to the press. But you know how
they 'modify' things.

And it is a tough job keeping those wetbacks out of the USA. Glad GW
did such a fine job.

One of the Contributors to the Study was the American Cancer Society,
I wouldn't exactly call that a conflict of interest. On the contrary, they
would have quite a bit of interest in whether cell phones were a contributor
to cancer.

Fred,
As a very pro-Gore INDEPENDENT, I hope like hell you are CORRECT! The
man is in office and it's up to all of us NOT to undermine him because
the country comes FIRST, not our private interests. Right now however
I'd say that GW is as much a Democrat, perhaps even more liberal, than
either Gore or Clinton. Surprise surprise you rightwing nuts. Your
Conservative is turning out to be a MIDDLE OF THE ROADER so eat your
hearts out. The joke's on you turkeys. Go GW Go!

Randy, do you think I, as a pro-Gore Independent, am wrong in wishing
GW the best of luck. Let's face it, GW is in for 4 and don't you feel
he needs everyone's support instead of constant disdain? If we Gorkins
have to bitch, let's do it about the REAL perpetrators of this
travesty-the FIVE crotches on the Supreme Court. Had they stayed the
hell out of this, the recount would have given Uncle Albert the win.
Do you agree?

This begs for an answer of two questions:

1) Did you keep records of ALL units in Vietnam?
2) Are you saying that Al Gore did not go to Vietnam while in the Army?

Dan, how about making up your mind? How many times on 14 megs did you tell me that Viet Nam was unnecessary; that it was concocted by McNamara and LBJ; that it was fought to pour money into Lady Bird's businesses? Did you not tell me that having gone thru what you did, you'd never allow your own son to participate in such a dirty stinking war and that if you had it to do over again, you never would have gone? If you deny making those statements Dan, you're lying.

Now after all's said and done keep in mind that Gore DID go and it made no difference in what capacity. HE WENT! Bush did NOT go. He went into the National Guard and never attended meetings. When daddy was as powerful as G.H.W.Bush, he didn't have to. Where do you get off smearing Gore in light of the events?

Sorry Dan but you don't play fair. You drum up bullcrap if it fits your rightwing agenda and your posting proves it. That damn Viet Nam War should have ended this way: every US participant would have been better off to have tossed away his weapons, refusing to fight. You guys were set up; you were fed like grist into a killing mill without any clear cut plan on how to win. Once upon a time I considered the dissenters cowards and un-American and so did you. Do you now?

Not necessarily Randy. Margaret Mitchell used "colored" dialect all
through "Gone With the Wind" and there's no way to prove she was
racist. She however was a genius-it's the greatest book I ever read
and I've read thousands.

I run my main 10/100 DSL switch/router about 5 feet from my sat rig (VHF
@250 watts and UHF @ 150 watts). One of the file servers sits on the floor
at the right side of the desk that holds my HF amp. A workstation with a 8
port switch hub sits on the other side of the radio desk , about 4 feet from
the transmitters. The network uses standard CAT5 cable. I have had
absolutely no problems with either the computers, hubs, routers, phones, or
the ham rigs.

Your mileage may vary...

I got one mid 80's when they were early on the market, used it for several years, and since that time have owned a couple others acquired in trades. All were very good rigs and performed very well indeed. Be aware that they are slightly limited in areas such as memory channels having 10 instead of the usual 100 today, they have no direct frequency entry keypad, and if the memory backup lithium battery which also holds the rigs "brains" has not yet been replaced, you should have thats done soon. As I recall, if it isn't done before the battery expires the radio must be sent to a service center for reprogramming. Overall it is a very good piece of equipment for the cost.

Dick

I guess Dubya "needs everyone's support" like Bill Clinton did when he
first took office. We ALL know how much support the opposition gave
him!

If the Supreme Court had not given it to GW, the FLA house would have!
Either way, the election was going to Dubya regardless of the votes!

As for he recount going Gore's way...We will not know for sure. It was
reported yesterday that several hundered votes that were discarded
revealed hundreds of votes, some for Bush and some for Gore. Gore
gained over a hundred votes just from those ballots.

Conclusions based upon anecdotal data ("Same here // me too // I agree")
should always be approached cautiously no matter what statistical
analysis have been performed on them. Now unless you're prepared to
state the statistical methods and operations you've performed in
your long-term VHF experiments, I stand by my original statement:
One should *expect* LOS communications on VHF, especially the MURS
users with their HTs, coupld of watts, and stubby helical antenna.

>Secondly, if you're going to
>pretend to have done any heavy VHF use, then learn the difference
>between DIFfraction and REfraction.

Yes, I regret the mistake, and I do know the diference. Our lighthouse
Fresnel lenses work on the principal of both refraction and differaction,
and I understand the principals fully.

>VHF propagation is very seldom optical line of sight with edge
>diffraction sometimes helping, but with atmospheric refraction often
>extending the range well beyond the optical horizon.

The topic concerns the new radio service MURS. To lead users of this
new CB service into believing that they can *expect* greater than
LOS communication on a regular day-to-day basis is just plain wrong.

I hope he can do it - but I doubt it, particularly with the near-even division
of both houses along party lines.

If the economy is doing good in 2004, he'll do well. If not, he'll take the
blame. The economy, and third-party spoilers, are why Carter and Papa Bush
didn't get re-elected.

Great! It's a ton of fun once you get the basic skills down.

>I'm up to abt 12 wpm now, and want to eventually be able to send and >receive at least 25 wpm.

Excellent target. At that speed it becomes just like talking. Most people can easily do 35-40 wpm if they stick to it.

> Anyway, I found this CW station on 13419 sending >coded groups at abt 13? wpm it seems (can anybody confirm this?), and copied >it for a few minutes. I often copy the w1aw 18 wpm bulletins with some >success.

That's the ticket. If you're trying to build up speed, you need to copy speeds that are beyond your capacity at the moment. At your stage, it wouldbe a good idea to listen to W1AW at 25, 20, 15 and 13 wpm, as well as the 18 wpm bulletins. You'll be surprised at how slow 15 sounds after a few minutes of 25 wpm. Plus copying real signals off the air is better experience than listening to tapes or software.
>
>Q?: Is there any evidence that copying coded groups can increase your speed >because of the randomness?

No. What random group copy does is force you to be accurate, and avoid the bad habit of anticipation. Random groups also help beginners learn the less-used characters, because they are just as likely to appear in truly random groups as the more common ones.

Copying random groups isn't a bad thing at all, but if it's speed you're after, listen to code that's "too fast" for you.

Also visit the MEGS (Morse Enthusiasts Group of Scotland) site:

http://www.joates.demon.co.uk/megs/

and read the wonderful online book about all aspects of code learning and operation. Worth downloading the whole thing and printing out. Lots of stuff about building speed and accuracy.

In the three years I worked at Coast Guard Radio Honolulu, we had only one reported case of tropo ducting permitting comms between us and the West Coast (CG Radio Long Beach). Those channels were busy 24 and 7, yet only one reported case (the operators were to log everything possible, especially any propagation anomalies). For you to mislead prospective users of this new CB service, MURS, into believing that they have greater than LOS comms with an HT is nonsense.

>It also made it quite clear to me why appliance
>operators like Jeff would be quite baffled by such a reality.

Appliance operator? Most of my HF transmitters are homebuilt from scratch (transmitters for 160m, 80m, 40m, and 30m). I began building Heathkits when I was an 8-year-old young pup in 1962, and have been building gear since. Go back to the '93 and '94 archives and look up the circuits I used to post on here with their ASCII schematics, trying to encourage others to build their own gear. My current project is the rebuilding of a Galaxy GT-550 xcvr with the ultimate goal of rewiring the final stage so it will run 6146s instead of the expensive 6LB6s.

The Kenwood 430 does not die if the battery does. You will loose the
memories and every time it is powered up it will come up at 14.000.0 mHz.
That's it. No catatrosphic happenings...

Isn't it silly that hams are told by Kenwood that you need to use
their qualified service personnel just to replace a battery?? Not to
mention that Kenwood wants an inflated price for their exact
replacement part battery, should you (gasp) try to do it yourself...

Well, Radio Shack sells a 3V lithium battery with a matching battery
holder that wired very nicely into my Kenwood TS-50. Take that
Kenwood...

>As I recall, if it isn't done before the battery expires the radio

I am amused that you think it would bother us that he is middle of the road. I think that you are starting to believe your own propaganda. You apparently feel all Republicans are to the right of Atilla the Hun. Most of us are just fine with the middle of the road. It is the extreme left we have been subjugated to, along with the vilification of religion, family values, and the glorifying of homosexuality, gangster rap, and revisionist history that we find offensive.

Most of us have no more desire to swing to the extreme right than we would the extreme left. Rid the political scene of professional victims such as Jesse Jackson and his crowd along with NAMBLA and Dykes on Bikes et all and I will sleep an untroubled sleep.

I have a R8 that is less than 6 months old and I am having problems
witht he antenna also. It was working Great and then all of a sudden
its like having a dummy load on the end of the coax!

I checked the coax (Which is also new) and Its not shorted and gives
me a perfect SWR when I connect a dummy load out there on the end of
the coax. Cushcraft (After a bunch of phone tag) had me send them the
matching box back to them, they tested it and returned it saying its
fine. I used to get better than a 2 on every band with out my tuner
now I get over a 8 swr and I can receive better if I connect the coax
to my dogs collar!

I spend over 400$ on that antenna, its the LAST $$$$ Cushcraft will
ever get from me!

Worked great, Looks Great, Does not last
I can not afford almost 100$ a month for an antenna!

I'm guessing you are either:
One of the strangers in your story
or
A lurker who heard this happen ?
Steve
N2UBP
Orange County ARES/RACES/Skywarn RO/EC

Steve:

Neither. Fresh on 75 meters after a decade absence, I am running into this proposition time and again. Thinking hams should know we don't own frequencies; rather we have a temporary privilege to use them.

The story was my way of venting frustration. Related therein are my thoughts whenever I enter the shack, still feeling that same wonder I did as a kid, some fifty years ago.

Thanks for the comments.

THis is a pretty good example of what I call an unfair attack. By your own words, the antenna was working fine when you first used it, and had a sudden change to poor performance. Logic tells us that something changed in the hook-up at your location, and did so abruptly. The fault can be found, and probably with only simple equipment. Why blaim the R8 when it was delivered in working order?

You say you have checked the Coax, and CushCraft has checked the box. Why did you stop there, and blaim them? There is more to the system than that.It is apparent that something changed at your location- maybe a 'hit' or a loose connection?

just my slant on it. Bill-W4BSG

Exactly.

I about fell out of my chair a couple nights ago when this exact scenario happened on 3748/3750. The exchange was bi-directionally polite, to the extreme. The 'second' op finished his dx, went back up to 3850 thanked the group there and everyone was getting along just fine. There could have been 5 times as much time wasted bickering about who jammed who, but they handled it "the right way", and everything was back to normal in probably under 2 minutes.

As they say, it takes a lot more more facial muscles to frown than to smile :-) It takes a lot more effort to defend a few KCs than it does to be a gentleman.

Unfortunately, if the coax was developing problems, it would become more lossy and SWR readings would be entirely useless. You need to measure the power being delivered to the far end of the coax cable to make this determination. You can make a fairly decent microwave dummy load with several hundred feet of lossy cable.

Pete

I tried to think of a nice way to reply to your bovine. I can't, your full of crap... Check out who was a member of the skull and bones group. Follow him through school and you will see no one even knew who the hell daddy was. Daddy had no pull getting him through school. He may well have had some pull getting him in the National Guard, Unlike "Combat Al" who had two bodyguards with him when he left his semi-automatic typewriter.

To suggest that he bought the supreme court sets your level of credibility.

3500. Kenwood TM-D700: problems clock and APRS

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-21 19:31:57 UTC
From: Steffen Spies <spies@rsg-wolfsburg.de>
Message-ID: <3A425AAD.264C0EF3@rsg-wolfsburg.de>
Source record: 97418

Hi,

I gotmy TM-D700 last weekend.
It's working fine except two problems:

- Internal clock: I set the time to 17:45 - after 15 minutes it shows
28:00 - 60 minutes later 29:00 - 60 minutes later 30:00, 31:00 ...
The minutes are counted correct, only the hours-counter is wrong.

- APRS: I setup ARPS and it was working great. I saw different stations
and they saw me. Since today, I'm receiving stations datas, they get
digipeated by my TM-D700, but I don't see them on the screen!
Same settings as before.
I see the datas by watching "P.MON".
But no stations under "LIST".

Does anyone know anything about these problems?

Regards,
Steffen / DO4OSS

Right. But more often than not it's the rule, not the exception.
Unfortunately!

Here's a followup to my earlier post:

Surf over to:

http://griffy.nmt.edu/sara/sara/finley.morse.html

for an excellent explanation of how to use the Koch method. Written by Dave Finley, N1IRZ, it does an excellent explanation of the method, how to use it, and why it works better than other methods for most people. (much better than my earlier explanations). Good bibliography and a detailed explanation of how to do it with Super Morse.

All that you really need to know is right there.

Koch first published his method in 1936, but it got little ink, probably because there was no way to easily implement it at the time. Computers changed all that.

A group of Koch's students back then achieved 12 wpm solid copy in just 13.5 hours of practice.

I have no connection to N1IRZ - don't think I've ever heard or worked him on the air. His stuff is right on, though.

i need to construct a transmitter and receiver that can operate a small motor. the motor needs only a constant voltage so i thought some type of cw transmitter would be in order. could someone point me in the right direction as to how to do this? the transmitter doesnt need the greatest range (about 1/4 mile), but the ability to tune both the transmitter and receiver would be nice but not necessary. the receiver does need to be rather small and i would like to use an antenna like that in a garage door receiver, but havent been able to locate an information source on these coiled antennas. any help would be greatly appreciated.

thanks much

Jeff

3513. Odp: Reviews on Kenwood TS430s????

Which models do die from the battery? My friend owns a TS680S, will that suffer and is it possible to replace the battery on that yourself?

Many thanks for the advice in advance.

Regards

Bartek

PS Thank god for these newsgroups, if I didn't read the posts here then we would have probably not known about the possible solution and Kenwood would have gotten even richer still!

Yes, in a little publicized experiment, British soldiers were given ginseng. It had the usual effect. They then wired up contacts to the spring-like "lever" and used the lever and contact assembly to send morse code manually.

You can well understand their desire to keep the results of the experiment "under cover." Imagine this capability falling in to enemy "hands." Nuff said.

Hmmm, let's see - five republican justices voting for dubya, with one of them having two sons working on dubya's campaign [no bias there] The other four owing the republican party MAJOR favors [now paid back]. I think the credibility issue is with you. As for the "skull and crossbones" club - it is an "invitation only" club who's members are selected primarily for their who's who standing. They didn't know his daddy was a multi-millionaire oil man from a long line of oil men ??? Just who is the one full of crap Fred ??? Follow him through which school ?? He failed to complete [oh, I mean transferred from] numerous top flight schools. You accuse me of being bovine - Well Fred it is better than ovine - sheep just blindly listen to the crap the republican party spins out by the ton and swear it is true. Remember it was the republican's that shut down the government to force the president to accept their pork padded budget - then they blamed it on the democrats. Handy excuse - anything goes wrong, blame it on the democrats and you will blindly believe them. I pity you, when [not if] Dubya fails, you will be right there in the lead crying it was all the democrat's fault, sniff, sniff BWAAAAA!!!!!

They didn't "vote" for either side, they ruled on the law. They found that the methodology Gore was trying to use for his recount was unconstitutional - and it was 7 justices that made this ruling, not 5.

For the record, 2 of the seven who found Gore's efforts unconstitutional felt that they could set a new date for completion of the counts if Gore changed his methodology. 5 of the justices observed that this would be yet another violation of both Federal law, as well as the prior FL Supreme Court rulings setting the deadline for completion of the recounts.

In other words, AlGore's democrat FL Supreme court was ultimately responsible for sealing his fate...

After failure to hear the beacon again this weekend, inside stories are the engineering team fears it may never communicate with the satellite again. Its just a matter now of finding what went wrong.
NORAD finds the satellite is in one piece, but how could it self destruct since its motors use helium.
I think NASA used hydazine? It had an exposion during retro fire during the Mars surveyor mission.
Anybody running odds if AO-40 will ever phone home again?

Lets do a correction on part of that...The TS430 Does NOT lose its
"brains"
when the lithium battery quits, just its memory programming which then
will need to be reentered each time the rig is powered up. That's user
memories only. (it was an ICOM that I had that lost it all).

No I did not keep records of all units in VN. But why in the hell
would a JOURNALIST be assigned to a ENGINEER UNIT? See my
point...Another BS story to 'impress' the American public.

I have no personal idea if he actually went to VN. BUt I damn well
know I was in Vietnam and I'll say it again I NEVER HEARD OF THE 20TH
ENGINEERS, with a JOURNALIST assigned to it. That did 5 months of a 13
month tour (thats right 13 month tour).

One more time...the press said at first it was BienHoa, then it said it
was Long Binh. These were about 20 miles apart. I was at Bien Hoa,
Long Binh and Saigon. ALL IN THE SAME AREA. Part of my job was
knowing where US TROOPS were at. I NEVER HEARD OF THE 20th ENGINEERS.

It wouldn't be the first time the press lied lately, right?

I must be a real ham then, since I don't use them. But some people do
and no description of a rig is complete without them.

Dan, I assume that you are a reasonably bright person so use your
common sense.

Do you REALLY think Al Gore could get away with this "lie"? Don't you
think that the military buddies of Dubya would have checked the records
to see if it were a lie? Come on now. Do you REALLY not believe Al
was in Vietnam?

Radio Shack's last top of the line model was a TRC-465 or their
"chrome classic" radio. I thought you had a nice Grant or 148GTL
or maybe a Uniden sideband unit. If you're lucky, you might get
$20.00 a piece for them IF you have the boxes. The Shack is the
last place I'd buy a CB radio from.

The traps could be the problem here...I've had them blow up on Cushcraft antennas before when they get wet with even low power. Is the SWR the same on all bands? If it's not, take the traps apart and look for burned insulators, corroded connections, moisture or insect nests. I would also check for corrosion where the mast sections slide into each other. Clean those areas with a wire brush, and coat with "NoAlox" before reassembling. If it's the same on all bands, it's the coax connectors, or the tuning-box connections.

3536. Static in phone

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-22 02:51:17 UTC
From: "Chet (KB1EHI)" <alena@mediaone.net>
Message-ID: <Fkz06.12402$1M.3303912@typhoon.ne.mediaone.net>
Source record: 97354

Hello.
I need advise on a problem I'm having. At my fiancee's parents house, they have ALOT of static on their cordless phone. I believe that this is due to RFI from all the electronics they have.(2 computers, wireless headphones, tv, vcr,probably 2 or 3 cordless phones) I suggested that they should get a couple of filters for the phone lines. Is there a way to test my idea without actually buying the filters. OH BTW, when I lived there, I had a corded phone that although it wasn't staticy, it was very quiet.

3537. Re: Cushcraft warning

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-22 03:50:16 UTC
From: dmccord@usol.com
Message-ID: <3a42cb34.6590388@news.usol.com>

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

This thread is about the LACK of Support From Cushcraft, With a antenna that is less than 6 months old I received the same fine customer service that many other Hams have claimed here.

I want to thank the person with the idea of a watt meter at teh antenna end of the coax into a dummy load, I had not thought of that and it sounds like a good idea.

I was told by Tech Support at Cushcraft the the ONLY thing that can go wrong with the R8 Vertical is the Black box (Matching network). The antenna is Bran new so it has not coroded yet, I checked all coils with at least a Volt Ohm meter and they have a connection.

The antenna is in my pole barn awating the weather and time that will allow me to play with it some more. Here in Michigan we have had over 2 feet of snow in the last week. I spend more time with the snow blower than I do with my Wife!

Could I have another problem, I am sure I could, I do not pretend to be an expert on antennas and feedline. So I spend the money and purchased an antenna from experts. I will say there could be some information on there website about trouble shooting antennas. There is nothing that I have found. The simple trick of the watt meter at the antennas end of the coax into a dummy load. In fact I am already working on purchasing 100 feet of New coax to run out the door and just use to test and compart to eliminate the coax from the problem.

And about the antenna working when it was "Out Of The Box" Fine but if I buy a car and it has a warrantee I expect it to work throughout the Warrantee period and beyond.

Again just to clarify this thread was about the lack of customer support at Cushcraft, Them supplier me Customer, They are suppost to help me....

>think a 3 month deadline I had for the code part as I left the country.
>
>Is this exam that I took still any good or must I retake it or ... what
>exactly do I do for the new licenses.

Here's the short story:

Your CSCE for old Element 2 carries no credit any more. Sorry. You need to
retest to get any US ham license.

Here's the full story. It's kind of confusing.

Before April 15, 2000, the test elements had different names than today. The
code elements were 1A, 1B and 1C. The written elements were 2, 3A, 3B, 4A, and
4B. You could get any of six different license classes: Novice, Techncian,
Techncian Plus, General, Advanced, and Extra.

"Old" written element 2 was for the Novice license. You needed it and 5 wpm
code for a Novice. "Old" element 3A was for the Technician - you needed "old"
elements 2 & 3A for a Technician back then.

But after April 15, no more new Novice licenses were issued. The license
classes that you can get "new" were reduced to three: Technician, General and
Extra. The written test elements were reduced to three: Element 2 for
Technician, Element 3 for General, Element 4 for Extra. (You need 2 & 3 for
General and all of them for Extra). Just to make it confusing, "new" Element 2
is not the same as "old" element 2.

Element 1 is 5 wpm Morse code.

So here are your options:

1) Take new Element 2 and get a Technician
2) Take new Elements 1, 2 & 3 and get a General
3) Take new Elements 1, 2, 3 & 4 and get an Extra.

The problem is that while your "old" element 2 CSCE is still theoretically
good, the license it carries credit for is no longer issued to new holders by
the FCC.

The question/answer pools and practice exams are available on several websites. Free Morse training software is also available from several sites - all you have to do is download it.

Good luck!

73 de Jim, N2EY

After April 15 the
1A

Errrr ... Uhhh ... Actually, Dubya graduated from Yale, then from
Harvard Business School with an MBA.

AlGore graduated from Harvard, then later went on to divinity school
and law school, but did not complete either of them. It seems that
his enrolling in divinity school had the one main effect of getting
him an early release from the Army (it was a standard practice in
those days to get out early if you had been accepted at a college or
university).

his enrolling in divinity school had the one main effect of getting
him an early release from the Army (it was a standard practice in
those days to get out early if you had been accepted at a college or
university).

OH? I served my 13 month tour in Vietnam and I saw no "standard practice" to
allow me an early out. It was more of a standard practice to allow the
scions of highly placed politicians to get out early before any harm could
befall them. (College or no college) Al Gore served a scant five months....a
sheltered five months at that. He didn't really know which end was up and he
was never "shot at" as he claimed. Al Gore was for all intents and purposes
a REMF.
I do not consider him a Viet Nam veteran...he was but a tourist.

Nobody that went to Nam was a tourist, even though they/you
call it a "tour" of duty.

[Don't you love the "conservatives" that hate Clinton for
being a draft dodger and think "W" is the restoration
(subliminally?) of dignity to the military?]

Nam didn't know tourists. Nam was a life lottery. Win, you go home.
Lose, you die.

Some folks were killed the first week they were there, regardless of
where they were, what their jobs were, etc. They were just as dead
as dead gets. Nam got'em. Rockets, mortars, booby traps, friendly
fire, AK-47s, suicides, etc.

Flesh ripped and life stopped. And every guy that died (or was
wounded) is an American hero compared to the guys that either left
the country or skated out. That includes "W" AND Clinton.

Nobody that went to Nam was a tourist. We were Americans, in harms way,
in God's hands. Nobody gave a hoot if you were a Republican, Democrat,
or what kind of political family you came from. You were there and you
knew you might not make it back.

Gore was there.

"W" wasn't.

Clinton wasn't.

Semper Fi!

Truth is Repugnacans are always blaming someting on the democrates.
But Now BUBBA will put the economy in shambles.. stop our recovery by
not paying off the debt.. its really sad anybosy could want these fools
running the country.
They may even start a new war. That would be the manure on an cake.

3555. Re: Intelligence: Gore v. Bush

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-22 14:50:26 UTC
From: Blinky <worez_magic@hotmail.com>
Message-ID: <SSJ06.496$G4.11873@newsread2.prod.itd.earthlink.net>
Source record: 97372

This looks like a good place to jump in:

RE: Tenn. Division Echo: Great statistics on Presidential race!!!!!

States won by Gore: 19
States won by Bush: 29

Counties won by Gore: 677
Counties won by Bush: 2,434

Pop. of counties won by Gore: 127 million
Pop. of counties won by Bush: 143 million

Sq miles of country won by Gore: 580,000
Sq miles of country won by Bush: 2,427,000

Now Professor Joseph Olson of the Hamline University School of Law in St.Paul Minnesota has produced another interesting new statistic.Professor Olson looked up the crime statistics for all of these counties and came up with this:

Avg Murder per 100,000 residents in counties won by Gore: 13.2
Avg Murder per 100,000 residents in counties won by Bush: 2.1

Now, what area of this country do you want electing the President of the United States, Gore's or Bush's?

> emissions might have on the network cable

Just the opposite! I set one up and it provided an s-7 white
noise across much of the HF band on my Kenwood. Seems
that the network cable (CAT-5) acted as a huge antenna to
radiate noise from within the PC to the outside world, in this case
in the shack. If you can use fibre as an alternate, do it.
Most PC have very dirty and cheaply made power supplies that
are the culprit. (hint: if it's "made in china" is a warning label!)
The damm network card coupled PS noise and radiated it, rendering
HF reception damm near useless when powered on.

>All you need to do is get the shortest antenna possible and use the lowest
>power, and noone will even notice.

Here we have a licensed amateur radio operator (proudly displaying his callsign in his e-mail address), publicly stating that he would illegally use modified ham equipment on MURS and FRS. Not real smart, Lloyd.

The fact is that MANY hams do use such equipment on FRS, MURS, business band, GMRS, etc. Just as MANY hams used modified HF equipment on the CB band. But very few are foolish enough to announce they do so in a public newsgroup. This is tantamount to walking up to a cop and announcing that you just robbed a bank.

Come on, Lloyd. Given all the ruckus over 75m & 14.313 in recent years (and the migration of some of the worst offenders to rec.radio.amateur,misc), dontcha think that Riley just MIGHT be monitoring this newsgroup?

Dan, almost every unit with a public affairs office had journalists (MOS 76Q, Public Affairs/Journalist) working in those offices. They produced the unit newsletters, press releases, public information materials, articles for military newspapers, and so forth. They were also responsible for handling members of the civilian press.

Therefore, while I can't address the 20th Engineers specifically, I can say that many larger engineer units had a public affairs office, therefore were likely to have at least one 76Q (often several) assigned to that office.

The topic concerns MURS HTs, putting out maybe a watt into a stubby
helical antenna. Users of this new CB service can *expect* no more than
line of sight comms. That's my original contention.

>The fiction that frequencies above 100 MHz are only good for line of sight

My, my, Doc. You're starting to show your colors. Do you think that all mainstream Baptist ministers can be described as you've done? Shame on you, sir. You insult people of that faith. Standard disclaimer: I'm not, nor was I ever, a Baptist. But, I am somewhat offended.

Steve

Radio Shack's last top of the line model was a TRC-465 or their
"chrome classic" radio. I thought you had a nice Grant or 148GTL
or maybe a Uniden sideband unit. If you're lucky, you might get
$20.00 a piece for them IF you have the boxes. The Shack is the
last place I'd buy a CB radio from.

Isn't it so special that we are graced with an opinion from a self-proclaimed
eggspurt!I'm only trying to sell my radios..dont recall having asked for an
opinion.Like it's said.."Opinions are like assholes......."

Federal, too.

So, TMR, have you been making any harassing phone calls to the
various UH deans lately? From what I've been told, the deans of
the following colleges have been harassed by you: law, medicine,
education, nursing (?), dental hygiene (?), natural sciences, arts
and humanities, and languages. No telling how many other deans
you've harassed.

You gave yourself away when you posted:

>sigh.
>time to call the dean again.

...some time ago. AOL was more than willing to cooperate.

I have a NIB Orbicomm Model # KX-7101 Data Communicator with all hardware,
manual and GPS antenna (magnetic)
Follow link for detailed info. Unit sells for $895.00 and is BRAND
NEW/UNUSED
Photo upon request

http://www.panasonic.com/industrial_oem/satcom/products/kxg7100.html

Quick specs:

GPS - 8 channel (1575.42MHz), RX sensitivity -130dBm, 2 min aquisition time
Unit itself:
12-24VDC powered
Sat transmit - RS232C up to 9600bps
I/O - 2 digital inputs / outputs, 2 analog inputs
Freqs: Uplink- 148-150MHz(2400bps)
downlink 137-138MHz(4800bps)

I will accept reasonable offers - I need a pentium laptop, will consider
trades..

> disappointed, then steamed.

No, I'm neither. Since my rig isn't crystal controlled, I just tune
around looking for a spot. No biggie.
>
> Can you fathom, all these years you've been using this frequency and
> these strange guys don't have a clue.

Sure. They weren't listening when I was using it. I wasn't listening
when they were using it - until today.

> Surely they should know better.

Why?

> So you get on and tell them where to go.

No, I don't. If the conversation is interesting, I might ask to join.
Or ask for a moment to call the folks I expect to be there, and arrange
to move somewhere else.
>
> What's wrong with this picture?

It's not real. Not on the ham bands and modes I use.
>
> Consider: You don't own the frequency and cannot expect others to know
> or defer to your impending use of it.

Knew that since before I was licensed. It's in the regs. Of course,
some types of operation have precendence over others.

> To all who act otherwise, please
> see the light.

Sounds like you got told off, Bob. Try the low end of the band. Much
nicer.

The fact that you were heard is equipment dependent. Some repeaters, while transmitting, have their RX-to-TX path open, so if a signal comes in on the receiver, it will be repeated. Others mute this path when the transmitter is active but there's no COR signal from the receiver. Basically, you got lucky.

3579. ao-40 is like a sinking ship.

A short Novel, by Kepler 'The sinking Ship'

ao-40 is like a ship that has capsized and is upside down in cold murky water. Its supporters & contributors cling to the sides in vain hopes of rescue, but as time go by more and more of them with failing strength slide silently into the depths of the cold murky water until nothing is left. Only a few stale keplerian element sets remain as a reminder of the tragedy.

the end

> a major contribution.

As usual, the New York Daily News has its "facts" wrong. The article claims that in 1986 computers were only to be found in laboratories.

Nonsense. IBM PC cloning was growing furiously because PC sales had gone through the roof since 1982. Many people had computers at home.

The article goes on to claim that computer professionals were "jeering at the notion of personal computers" in 1986.

Nonsense. The date is way off. Computer professionals were the people who had been responsible for the unexpected popularity of the PC clones and the Macs, as they bought them for commercial and educational institutions by the hundreds of thousands. Back in the late '70's some professionals held that opinion, but not by 1986.

The arpanet of the late 60's and 70's became what is today called the Internet, and the people most often credited with the establishment of the signaling standards that led to the Internet would be very surprised to read that Gore was counted among them. Gore was a cheerleader for the "information superhighway", but he wasn't an initiator of the Internet. To substantiate that, all you have to do is look up the history of the net in a book like Comer's "Internetworking with TCP/IP".

The New York Daily News columnist reminds me of the Russians of the 60's as lampooned by the original Star Trek. According to Gore folks, they invented everything. Lars Eric Nelson is apparently the liberal NY Daily News's Mr. Checkov.

And as always, the New York Daily News is Full Of Shit (TM).

Rather than rely on the opinion you are going to get from all the jailhouse lawyers here in the newsgroup, I suggest you send your question to one of the VEC's, such as vec@arrl.org. They will give you the official answer. As I see it, you have a valid CSCE until it is 365 days old, and if you take the new element 1 (5 wpm) you would qualify for a novice class license. Although the novice class license tests were abandoned after April 14, 2000, the credit you hold is still valid. Write to a VEC, or call the F.C.C. and get an official answer.

I do not agree with the proposal that felony ex-convicts should be given restored voting rights - there are some acts that prove that a person is no longer capable of being a trusted member of society, regardless of their release from incarceration. Commission of a felony is one of those acts for which "civil death" (not my term) is the deserved outcome. People in this situation no longer have a voice in government, since they have proven their contempt for society through their actions. This is the legal position of a large number of the states in the US. There is no way for a prison sentence to "unkill", "unrob" or "unrape" a victim, making "paying the price for there (sic) crime" a large shortfall in the true cost of the crime. Released criminals have the legal right to live in society, but not to shape it.

The network cards themselves can also contribute to the noise, especially if strung up between two buildings like an antenna... That's how they can send millions of bytes of data a second. They are RF devices...

Don't worry, be happy.

Eventually, somebody will collect this satellite and return it to earth or
repair it.
NASA went and repaired the Hubble Space Telescope didn't they?
It will either get in somebodies way or space flight will become so
commonplace that this satellite will be retrieved.
It's just a mattter of time.

Yeah, my ex-wife's kind'a like that... :-)

I'd be surprised if we've heard the last of AO-40. From what I understand,
the ground crew still has a few options available to them. Best of luck,
guys!

Hey moron, the economy has been slowing down since about mid summer. One effect is the high fuel prices caused by the Clinton administrations lack of a energy policy. The only energy policy the Clinton regime has is to prohibit oil drilling in Alaska and give their buddies in the Lippo Group free rein with the coal supply since parts of Utah are now off limits. Lets see about Forrest Gores scandals such as Chinagate, Buddhist Temple, Hillbilly Mafia, etc.

Like the Degenerate party has done anything useful for eight years except have scandal after scandal. The only thing that has kept the economy afloat has been the interest rates set by the Federal Reserve. As far as Bubba goes, lets all remember that Billy Clinton has been called Bubba since a young age by classmates.

Umm well, I doubt it.. because the failure took place as the motors
were being manipulated for orbital configuration. However, on the bright
side the thing is in one piece and I'd say the on board computer may
have crashed or worse is dead brained. Can they recover.. I sure as hell
hope so as I contributed money to the project and imagine
the pain the developmental team is going to feel if this thing is a dead
doggie..

Pppppppffffffsssssllltt!! <--- Hungarian (which I am not) for "how much I enjoy the personal attacks of people from this newsgroup."

I have a police report on Kevin's ex wife from when she was institutionalized for the second time, that lists as the reason for necessary intervention by the officer, "mental illness." Where's your police report, or any report for that matter, that proves my husband is abusive? Aside from wild claims and vulgar rantings, not too much unlike yours and others, there is simply no evidence of any such behavior from Kevin.

Thanks for the many laughs,

Mrs. Strom

3605. Jeffrey Herman's paranoia (was: Re: MURS Frequencies a Mess Already...)

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-23 04:33:41 UTC
From: toomanyradios@aol.com
Message-ID: <20001222233341.05754.00003782@nso-mi.aol.com>
Source record: 97273

In article <9209r0els1@news.hawaii.edu>, jeffreyh@Hawaii.Edu (Jeffrey Herman) writes:

>So, TMR, have you been making any harassing phone calls to the
>various UH deans lately? From what I've been told, the deans of
>the following colleges have been harassed by you: law, medicine,
>education, nursing (?), dental hygiene (?), natural sciences, arts
>and humanities, and languages. No telling how many other deans
>you've harassed.

It would take a lot of time to contact all those deans. Likely the work of more than one person. Looking through the archives, I see you've created lots of enemies on this newsgroup. Tsk, tsk. Having all those deans contacted due to your antics on this newsgroup is certainly not something I'd be proud of or choose to announce publicly...but hey, whatever floats your boat.

Actually, I'm surprised you bring this up. The last exchange we had on this subject involved me asking you to provide proof to back up your allegations. No response.

So, I'll ask you again, Mr. Herman: please show proof to back up these accusations. Specifically, your accusations that I am engaged in harassing communications directed to you via telephone and postal mail..

>You gave yourself away when you posted:
>
>>sigh.
>>time to call the dean again.

Glad to hear you enjoyed this line and that it stuck with you all this time. Unfortunately, I cannot take credit for it's creation. If you'll read through your archives (which I'm sure you store on your hard drive for personal reference, given your paranoia and all), you will find that I was not the first one to use the line in this forum.

>...some time ago. AOL was more than willing to cooperate.

AOL will intervene only when there is a Terms of Service violation which directly involves their service. They do not respond to paranoid ramblings about alleged annoying telephone calls, correspondence sent via the United States Postal Service, etc. In fact, to persist in bothering AOL personnel with such nonsense, might even be construed as "harassment" by a reasonable person.

In short, you whined to AOL in a misguided attempt to censor my opinions which you disagree with. Since I'm still here, they obviously found no merit in your baseless allegations and accusations.

The joke's on you, Jeff...and we're all having a good laugh at your expense.

Whiskey, Whiskey, My Kingdom For Some Whiskey.
Will sell my CB for some whiskey. I didn't get a Christmas bonus this year.
I want some whiskey to go with my twistie.
Whiskey, Whiskey, My Kingdom For Some Whiskey.

Twisty, Twisty, My Sad Soul For a Twisty.
Will sell my CB for a twistie. I didn't get a Christmas bonus this year.

Don't get your hopes too high. If ET hasn't called yet something quite dire has happened which may not be fixable even with a rebooting. They do-not know if the bird is even hearing ground command sigs. Now, that's really operating in the dark and hoping for Santa Clause to fix whatever is wrong. Don't get me wrong I'm depressed if this sat is dead, because we shall not see another in many many many years!

: STILL not paying attention, I see. You just wanted to stay on yours. So
: you did.

Actually, the 10-12 wpm plateau is well documented. The reason it exists
is that people learn the characters by the individual components. In other
words, they learn a to be "di" "day", rather than learning the sound of
the character as a whole.

The mind can only do this translation so fast, no matter how much you
practice. You have to transition to listening to the sound of the character,
and later the sound of the words or even phrases, if you want to get your
speed higher.

You mean the scandals as engineered and preached from every
bully-pulpit by the Repugncan p** and moan machine?
Well, I agree Budda Clinton has a personal sex problem.. but guess what,
he keeps is pension and his wife and she gets 8 million before the book
she is writing is even done. Yes, this is America.. SING..
But, Gore was the popular choice and if Florida had been recounted he
would have won. The Repugncan machine.. money, power.. influence
peddling.. strikes again..

:> The damm network card coupled PS noise and radiated it, rendering
:> HF reception damm near useless when powered on.

Use ferrite beads or chokes on all the leads. The Cat-5 cables should
not radiate the data signals - after all, many of them are often run
in the same plenum - without interfering with each other.

The problem would be due to common mode signals - which are not
necessary or desireable.

: The network cards themselves can also contribute to the noise, especially if
: strung up between two buildings like an antenna... That's how they can send
: millions of bytes of data a second. They are RF devices...

See above.

But, Gore was the popular choice and if Florida had been recounted he would have won. The Repugncan machine.. money, power.. influence peddling.. strikes again..

How many times must these votes be recounted? Five? Six? Ten? A year, two years or more hence?
These numerous "recounts" were seen for what they were...a cheap attempt to manufacture more votes for Alexi Gorebachov.
Get over it. The attempts to cheat fell short and were thwarted. Democrats hate it and will whine for years on end about this one. Next election they will just have to get more homeless, illegals, and felons to the voting booths than they did this time.
Gangster Daley is already plotting and Hillary is salivating.

Got notification today from my ISP direct and from corporate IT gurus
about this virus - plus a 'sample' someone sent me. OS/2 ignores it,
so I got a look at it. My subject line was Snowhite and the Seven
Dwarfs - The REAL story!, attachment was midgets.scr (23040). Moved
it to an isolated W98 box and - well, your warning is valid in this
case. The kiddies are at work again, looks like.

In germany, we currently have de.comm.ham - now some people want to restructure the complete de.comm.* hierarchy.

Since things like de.comm.funk sound rather funky (funk means radio in german), I suggested to include .de in rec.radio.amateur as rra.de .

This could be extended to other languages, too.

I invite all hams (but not those german-non-ham reorganiser freaks) to discuss the topic.

To keep it secret, hi: please do not dicuss this in admin:* or other non-ham groups - tnx!

Also think of the accessibility from within Net44, Packet Radio etc.

73 de Stefan, DC8SB

BTW: the lang=deu disussion can be found in de.comm.ham - where else ;-)

Lookie here at Profit NUTSACK Davies casting aspersions upon somebody
else, what a hypocrite.
Davies, at least I didn't get out of high school with a 2.0 average
like you did. At least I don't parrot racist and bigoted websites and
follow a SHAM of a preacher. You enjoying that "Hooked on Phonics" CD
that Brother TL sent you? You'll need to hone your piss-poor English
skills befoer you can tackle that project of getting your
A+.....in 2010.
I have a degree in Criminal Justice, you just squeaked by with a high
school diploma.
Baldy, go apply that Rogaine while you watch that Richard Simmons
weight-loss tape.
The beauty of what I wrote in response below is that I'm black. The hag
is married to that racist, and is probably one herself. ROFLMAO!
And if you're not Davies, go fuck yourself anyway.

This is no joke... my sister had this virus sent to her, with the joke.exe
attachment. Another virus was sent the next day with an attachment called
sexyvirgin.scr.

Luckily she realized what they were and didn't open them.

As for your foul accusations against my wife, who, quite contrary to your lies, is beautiful and in her twenties, they are utterly fallacious -- and you are beneath contempt.

I challenge others on these newsgroups, especially those who have been critical of my positions on issues, to condemn your filthy attacks on a young woman about whom you know nothing. Honor will show itself.

As for your accusations against me, I ask you to provide one iota of proof for any of them.

With all good wishes,

--

Kevin Alfred Strom.

Kevin, when arguing with a damn fool, make sure he is not doing the same. I would not allow an ignorant, contemptible person like he to disturb the cosmos one iota. Ignore his sub human behavior, and realize that his only hope of recognition in life is to attack those he envies.

He needs to set fire to himself and his trailer at once!

Warmest Holiday wishes to you, your wife and children.

I work for an ISP, i can say first hand that this virus IS real. From what ive seen it comes as an e-mail, ususally titled "Show white and the 7 dwarves..." I have seen a few variants of the virus, it seems to mutate itself into different viruses but i dont know that for sure. I think the only way you can be infected is if you OPEN the attatchment. ive seen the attatchments come in a few different flavors, one was an EXE another was an SCR.

Good Luck.

I wish the anonymous coward no harm, though I do believe that it
would be in the best interest of everyone, especially himself, if he
could be kept far away from keyboards, microphones, and sharp or
heavy objects.

You are right that he and his sewer-mates' excresences should be
ignored. That's usually what I do. But when a continuing train of
foul lies and abuse is levelled at my wife, an exemplary woman and
mother, I must speak out.

> Warmest Holiday wishes to you, your wife and children.
>
> Fred W4JLE
[...]

And my best Yuletide wishes to you and yours, Fred.

With best wishes,

Kevin, WB4AIO.

I am looking for a copy of the SSTV program SSTV Lite.
I understand the author is no longer supporting/selling this software.
Is there anyone out there that would be willing to share a copy with
me?

Thanks, Jerry K4FJK
jerrys@adept.net

Please allow me to be the Devil's advocate for one posting here. And
let me qualify what I am about to say as someone who is still hopeful
that AO-40 has not run out of options.

I think the 'Sinking Ship' story was more of an observation about what
the author has been reading on this news group rather than his
pessimistic attitude to the bird. His observation is that others on
this news group might be a little quick to abandon ship.

There now, no need to arm bears after all 8-)

From: "Pez D. Spencer" <no@spam.com>
Message-ID: <3A450A1E.77170088@spam.com>
Source record: 97315

Hi,

I'm looking for plans or any related info (even a kit) for
a crystal radio that will drive a loud speaker. I've seen
this done in the past, so I know it's possible. Any
info on this subject will be of great help.

Thanks for answering here.

Regards,

Pez

Wrong. Remember that credit for a novice license is only the current element 1, which would not be different that having a CSCE for the test you just suggested, except for the credit expiration date.

What it comes down to is that a CSCE for the pre-April 15, 2000 element 2 is completely worthless now, period. I am a VE. I know.

>their release from incarceration.

That's pretty harsh, Curt.....

Remember, there are plenty of instances when a person has to plead guilty because they have run through all their savings, lost their homes and jobs, and have no more money for a defense. I've worked with several folks who got thrown in jail and sat there for up to eight months while the DA kept dragging things out. Meanwhile, you get all your attorneys and witnesses to show up in court and the DA "continues" it again and again until you run out of resources.

>There is no way for a prison sentence to "unkill", "unrob" or
>"unrape" a victim, making "paying the price for there (sic) crime" a
>large shortfall in the true cost of the crime.

Would it surprise you to learn that in many states, simply putting your hand on someone's shoulder and preventing their walking away constitutes Kidnapping--a felony. Operating a radio contrary to FCC rules and regs also can constitute a felony.

While doing intakes for a prison psychologist, I've seen a variety of things which gave me a new insight. One fellow was in a maximum security prison for illegal deer hunting. He was a Native American, and was only doing what his people had done for thousands of years.

Another was doing a life sentence for "Unauthorized Use Of A Motor Vehicle." (He borrowed his girl friend's car without specific permission). He had two prior convictions for relatively minor offenses when he was young. He'd kept his record clean for over fifteen years, but the third offense triggered a Habitual Offender law which mandated Life without Parole.

>Released criminals have
>the legal right to live in society, but not to shape it.
>

Before you get too haughty, Sir, keep in mind the old phrase, "There, but for the Grace of God, go I." During calendar year 2000, my state saw two individuals released from prison after "victims" retracted their story. One was a molestation situation where the girl (now a young adult) finally admitted she made up the entire situation FIFTEEN years before.

While I agree with you that one cannot "unkill" or "unrape", we likewise cannot restore 15 years of this man's life--although the state tried to make it right by giving him $5,000. Is that generous, or what!

Not where I come from. Those two guys both held old Class A, or
Advanced tickets. Used converted WW2 rigs known as SCR522's. I looked
over the shoulder of one as he made the conversion. What a job that was!

>speed higher.

Only if the code is learned at low speed with "normal" spacing.

This problem is avoided by using Farnsworth code, in which the letters are sent
fast enough that "counting" the elements doesn't work. A letter is heard as a
single sound, not a bunch of dits and dahs.

We don't teach children language by talking very slowly. We say "cat" not
"kkkkuuuuuuuhhhhhhhh aaaaaaaa ttttttttttttt".

That's why W1AW sends the slower speeds Farnsworth-style, and has been doing so
at least 35 years.

Hi,

Does anybody know of the specific cable wiring interface between the PacComm Spirit 2 PAD's radio port (DIN-8) and the GRAPES (WA4DSY) 56KB RF modem's RS-422 port?

I just purchased a couple of these units but PacComm did not include any information (even though they manufacture both units and market them together as a compatible configuration).

Any info would be greatly appreciated!

...Will

No, I guess you missed the news. Gore (the village idiot) did not win.
Never can believe anything Nostradamus wote. Another thing that did not
comet to be.

It is scientifically proven that bird poop is good for the carpeting! All you gotta do is pour some water (or spill some beer) on it and VOILA! You have your very own Chia Pet right there in your living room! Add a DayGro light and pretty soon you'll have a virtual jungle. You'll soon be the envy of your one friend and neighbors.

That would depend on the length of the tail and how the dog holds it, down,
straight back or up. A husky with a curly tail ought to give you circular
polarization, great for sat. work. ;<)

Capture effect in FM is when one signal is 3 dB or more above the other,
and "captures" the limiter and detector. If the tone detector is open
at this time, it will loose the tone, and unlock.

3674. Re: Cushcraft warning

I have had a Cushcraft ground mount HF in place for six years now. It still works flawlessley on all bands, including six meters and, surprisingly, two meters!
When I put this antenna together I did stray from their instruction a bit. I liberally coated all the contact points with a compound called De-Ox. This eleminates oxidation due to things such as acid rain and other elements.
I do check the antenna every two years with an MFJ antenna analyzer and I have had to readjust a couple of the coils...usuallly the 17 meter one. This antenna does flex in the wind and despite making all the connections tight, they do tend to "migrate" a little.
Suggestion: once you get the antenna set, mark the location of the coil clamps with a number two lead pencil. You can then loosen the clamps and slide them back into position and the markings seem to stay in place despite rain, snow, etc.
The only gripe I have with Cushcraft is that they charged me sixteen dollars for the six meter add-on. This consisted of nothing but two little aluminum clamps and a length of coated wire. That was kind of a rip-off and I let them know. They did not respond.
One last suggestion. Install radials under the antenna! This is important. I buried a couple dozen lengths of #12 coated household wire about two or three inches under the soil. These reflectors need not be of any specific length, though some purists may argue that point. It is important that you do this for the antenna to work well.

Name and call not given.

Having worked at a department that granted EE degrees, I have never
been able to fathom why a tech is worth less than 50 percent of an EE.
Many of our grads new essentially nothing of value upon graduation and a
good friend of mine told me after three years at IBM and a big salary,
he used NOTHING he had been taught in the standard EE course.
So much for sanity and fairness in the world..

> (Posted & Mailed)

I agree that improper or mistaken incarceration of an individual for crimes they did not committ is always a tragedy and should be avoided at all costs. This shouldn't contribute to the formation of state or national policy concerning the rights felons, however, since one is forced by our legal system into the position that if a person is found guilty of a felony and is sentenced, or pleads guilty to such a crime, then they are presumed to be guilty in the eyes of the law. It is a mistake to moderate the treatment of such individuals simply because there is a tiny chance of legal error or prosecutorial misconduct resulting in a false conviction. No amount of sentence moderation or post-incarceration restoration of voting rights could possibly ever make up for the imprisonment of an innocent person. If you advocate making life easier on felons because there might be an innocent person in the system by mistake, then you cannot in good conscience advocate the incarceration of anyone at all. On the other hand, the vast majority of convicted felons richly deserve their fate. We as a society accept this imperfect system because there is no better alternative on the horizon.

I had a 430 new that exhibited a common problem, I was told. Well, when the rig got warm, the synthesizer would unlock, rendering the radio unusable until it cooled down. I sent it off for warranty service and the problem was corrected.

To date, no manned orbital flight has been in the region of geosynchronous orbital altitudes, so there's a long way to go for a retrieval/repair (ala Hubble) to take place. I believe that there is a radiation risk to humans in certain orbital domains in that region as well.

Yes, I am quite aware that the satellite is "way out there" as you put it.HST's repair proved that things can be retrieved in space. There is a lot of "Space Junk" floating around in orbit. Eventually it will get in somebody's way, or someone will collect it as a "Space Antique". I don't know how soon, but unless AO-40's orbit significantly decays, someday it will be retrieved if only as an historical object by our great-grandchildren.. But IMO I don't think it will be that long.

Personally, I think the whole idea that "FCC Type acceptence" is a
Big-Business ploy. How do you think Mr. Hollingsworth got to where he is
today? With "Type acceptance" companies like Motorola and NEXTEL
(Nextel paid Hollingsworth during the 1980's to do some favors for them
while he was in another branch of the FCC) get more money to sell more
radios to follow "type acceptance"

>
>Come on, Lloyd. Given all the ruckus over 75m & 14.313 in recent years
(and

Hollingsworth is powerless on a Newsgroup. He would have to have
documented on-air complaints. Given the fact that I hardly ever get on the
air anymore, it's gonna be hard for me get a letter from Hollingsworth.

Too bad you're so anally fixated. Take a laxative and call me in the morning.

Doc...Doc...here you go again. Just for your information there is no such animal as a 'allegator'. An allegator might be one who makes allegations based on little or no fact, but I don't suppose you meant that in the overall scheme of your response.
An ALLIGATOR is probably what you meant to type....darn those typos, eh?
Again...if you truly have a doctorate you failed to include in your missive just where your area of expertise is.
As per the laxative, I've no need for same. Thanks for your diagnosis, however. Might I suggest again that you avail yourself of a spell checking program? It will save you embarrassment in the long run.
I am not anally fixated, as you suggest. I do not recall making any reference to that orifice. Methinks you are more fixated on that portion of the body than you let on.
OK, "Doctor"...the ball is now again in your court. Have at it, but watch your spelling!

This just in.
I sold my Thunderbird, broken window and bad transmission included. Those of you who wanted to buy it are too late.
I got top dollar for it, too. The CB'er who bought it is giving me twenty dollars a month for the next four months until he gets it paid off. The guy has good credit because he has a job at the Burger King. He might even pay it off in advance if he can afford an extra five dollars here and there.
Thanks to all of you morons who saw my ad on Ebay and answered.
Next month I will have something else for sale since my phone bill is overdue. Is anybody wanting a couple of bald tires on rims? They need air but they got another two hundred miles in them. It ain't much, but it will git you to the likker store a time or two.
I will trade these tires for a new mailbox if you have one. Leave your old numbers on it. I don't want to have my real address showing because the bill collectors are trying to find me and I have to dodge them. They keep sending me phony bills that Ham operators are forging with my name on them. It is NOT MY FAULT and I'm gonna sue somebody just as soon as I can find an attorney who will let me pay him ten dollars a month. I have done nothing wrong. These bills are bogus and I refuse to pay them. I am not a moron. I know a conspiracy when I see one.
I just want to be your friend even though I hardly ever tell the truth! I am not dysfunctional. I am not a whacko...I am NOT chemically dependent and I am NOT a moron!
Merry Moron Christmas to you all....

Years I did a cost analysis of what it takes to ship an empty box. It
was less the actual postage charges, but included taking the order
and all the paper work.

It was about $18.

I suppose if you throw in the time to answer complaints or questions
from cheap whining hams, the cost would be even higher.

Hubble's orbit, which is very nearly circular to begin with, was lowered
to about 250 miles each time it was worked on. This would then presume
that we have power and control over AO40, which we do not (at the
present time). The chances of retrieval of a $4M amateur spacecraft by
a $100M shuttle flight are somewhere between slim and none. Physics and
economics just don't see that one in the cards.

I chose not to vote for anyone running for the state's Office of
Hawaiian Affairs, and guess what? In that category my ballot was
considered an "undervote" (your words). It was certainly "counted"
by the optical reader machine, but no vote was cast for any of the
candidates.

Voters have a right to cast a ballot in which they've voted for no
one in a particular category; maybe they're undecided or have no
preference or they just don't care. The result is an under-count, a
perfectly normal outcome that occurs in every election.

Do you understand what an under-count means now?

The only posibility would seem to be if it could be done as a minor
side project piggybacked onto another mission. That makes the odds even
slimmer that circumstances would fortuituously team up to make that
possible at all.

>The Real Techs pioneered amateur VHF/UHF in the 50s. We generals
>were in awe of those guys and couldn't hold a candle to them.

It began much earlier than the 50s, Cecil. Kruse wrote an article in the October 1924 issue of QST titiled, "Working At 5 Meters," perhaps the first VHF constructional article ever published. In the next few years much QST space was devoted to VHF, but tring to use it was a frustrating business. Transmitters were simple oscillators; stabilization of any kind was all but unknown, and not even considered for 56 MHz rigs. Receivers were regenerative detectors -- hard to get going at all, and then incredibly cranky to tune. Oscillators using debased tubes, mounted bottom-up to reduce lead inductance, and receivers with foot-long insulated tuning shafts to hold down hand capacity, were the order of the day.

Chapter 1 of the League's VHF Manual (at least in the first edition which is what I have) contains a nice historical sketch of the equipment used and its evolution through the decades.

Oh, let's not forget that WERS, the War Emergency Radio Service, used 2 1/2 meters during WWII:

What follows is a summary of the War Emergency Radio Service (WERS). Information was gathered primarily from "Fifty Years of ARRL," an historical record of the League and amateur radio.

First a bit of background: In 1939 there were 51,000 US hams. In September of that year war came to Europe. Of the 250 DXCC countries, 121 of them immediately went off the air (including Canada and the UK). The US maintained the strictest sense of neutrality. This was re-enforced by the ARRL, which came up with a neutrality code for amateurs. Hams were asked by the ARRL to voluntarily abide by the code, which they did en masse; this earned additional support for the amateur radio service in governmental circles.

In an effort to streamline its operation in preparation for possible US involvement in the war, the FCC at this time introduced multiple-choice tests.

By June 1940, the US invoked the Telecommunications Convention prohibiting US amateurs from contacting hams elsewhere; at the same time all portable and mobile operation below 56 MHz was banned (except the ARRL Field Day). At the request of the ARRL, the ban was modified to allow the League's Emergency Corps to continue work on the lower frequencies for training and

drills. All licensees were required to send a set of fingerprints, a photo, and proof of citizenship to the FCC.

The FCC needed 500 radio operators to man listening and direction-finding stations -- they asked the League's assistance -- the League put out the word in QST and within days of that issue, the FCC had the 500 operators it needed. (It's important to note for the duration of the war, the military and government always turned to the ARRL when radio operators and equipment were needed; the League would put out the call in QST and over W1AW, and the quotas were always filled in short order. Of the 51,000 hams mentioned above, 25,000 enlisted, and 25,000 remained at home to teach radio and electronics, serve in the communications industry, and serve in WERS.)

By June of 1941, tubes and other components were in short supply; each time the military asked hams to donate parts, they were flooded with whatever was needed. Many US hams were recruited for a Civilian Technical Corps to operate and repair British radar equipment. Also at this time, the Office of Civil Defense, at the offering of the ARRL, created a CD communication system with ham radio as its backbone (this relationship between between CD and ARS exists even today). Because the Army needed the 80 meter amateur band, the FCC gave hams 40 meter phone privileges for the first time, to make up for the loss of 80 (prior to that, 40m was a CW-only band.)

December 7, 1941, the US entered the war; hams were immediately ordered to go QRT. By special FCC order, the ARRL's W1AW was to continue its transmissions.

At the request of the ARRL, the War Emergency Radio Service (WERS) was created in June 1942. The Government Printing Office was inundated so the rules for WERS appeared only in QST. At the League's insistence, the FCC continued to offer amateur licensing throughout the war; this to provide standards for WERS applicants, and more importantly, to enable amateurs to prove their ability before enlisting in the armed services.

The purpose of WERS was to provide communications in connection with air raid protection, and to allow operators to continue their role in providing communications during times of natural disaster as they'd been doing as hams (WERS was not part of the amateur service, but was manned by hams; non-amateurs were permitted to serve in WERS in low level positions). WERS was administered by local CD offices; WERS licenses were issued to communities, not individuals.

WERS operated on the former amateur 2 1/2 meter band (112-116 MHz) and on higher frequencies. Again, WERS was not part of the amateur service but hams were asked by OCD to join -- and they flocked to it. Until the end of the war, if a ham wanted to operate he could only do so as a WERS operator. QST fully supported WERS by publishing technical articles on building WERS gear and modifying existing 2 1/2 meter ham equipment so as to meet the rigid WERS standards. Nearly every issued of QST contained WERS articles - two examples:

Oct. 1942: WERS operating procedures; how to train auxiliary (non-amateur) operators; and Feb. 1943: OCD's plan for selecting frequencies.

A sample of WERS operations: May and July 1942 -- communications support for flooding of the Mississippi and Lake Erie; 1944 communications support after an Atlantic Coast hurricane; 1945 -- Western NY snowstorm early in the year, spring flooding, and a September Florida hurricane.

After VJ Day in 1945, hams were given authorization to begin operating again on the 2 1/2 meter band, on a shared basis with WERS. WERS was terminated in mid-November. By the 15th of that month, the FCC released bands at 10, 5, and 2 meters for amateur use. The post-war era of amateur radio had commenced.

Merry Christmas, Cecil,
Jeff KH6O

ouch ! what a witty reply !!! Give it up Fred - you are only making yourself look more and more ignorant - why don't you try a "Yo Momma" that's always a sign of intelligence as well. BTW - I have retired from two careers now - the military [18 yrs] and the electronics field - gives you something to shoot for when you get out of high school, huh ???? I write the truth as I see it, you spout party rhetoric without even knowing what it means - stop shooting from the lip - take your head out of the guys rear in front of you and look around - dust off the cobwebs in your brain and START THINKING FOR YOURSELF. While you're at it, have a Merry Christmas ! Jesus is the reason for the season.

I guess the easiest thing in the world to do, is to set back and do nothing. This makes sure you can never screw up anything, while ridiculing any attempt by others that may go less than perfect. This is the same group that finds fault in the way we live our lives, worship our God, abhor sexual deviance, etc. and etc.

Had these folks had their way at Kitty Hawk, we would all be taking the train. I for one am sick of the nay sayers until they get off their lazy butts and accomplish anything, however slight. Until then shut up. The rule needs to be "No contribution, No comments"

Merry Christmas to Men of good will.

Jeff, I always did - an undercount is a ballot that registered no vote for a particular office. It can be that no vote was cast, however, the manufacturers of the counting machines testified under oath that their machines have an error rate or 3 to 5 %. That means it misses an actual vote cast 3 to 5 times per hundred. It is normally an acceptable error rate - except when the count is less than 1 %. Just because you inherited your entire net worth doesn't make you qualified to be anything but someone who knows everything there is to know about nothing, and nothing about everything. Now maybe you know what an undercount is .

Yes, but Fred...if you want to get a close-up view of how "Momentum" and desire to keep the project on schedule get in the way of doing it right, read the late physicist Richard P Feynman's report on the investigation of the Space Shuttle Challenger disaster.

Feynman was a member of the special commission which did the investigation and if not for him and his firm insistence on *doing it right and fully reporting and disclosing ALL the facts* we'd still not know what caused the disaster. It woulod have been swept under a carpet of doubletalk and obfuscation.

I found his report in the book "The Pleasure of Finding Things Out",The Best Short Works of Richard P. Feynman, by the author, as "Richard P. Feynman's Minority Report to the Space Shuttle Challenger Disaster Inquiry", chapter 7 page 151. Helix Books, Perseus Books Group. ISBN 0-7382-0349-1 http://www.perseuspublishing.com.

Note that his was the "Minority Report" which contained exactly what he found to be the facts. He wouldn't have done it any other way.
Makes you wonder about some of the many spin doctors operating here on rrap and so many other areas today.

Dick

Has anyone used a IC 746 with a Heathkit SB 220 linear Amplifier? Can I switch the amplifier's keying circuit with the built-in IC 746 relay?

I no longer have the specifications for the amplifier - so all help appreciated.

Terry - W6LMJ

Terry,
The SB-220 has about 110 volts on the keying line. Not
sure about the Icom's keying relay, though...

You need to remember that many of the more recent viruses are "self replicating" IOW they trick the system they infect into sending out emails with the virus attached to it. The email you get with viruses attached that are easily traceable are usually this variety.

The SPAM mail you get is a different story and should be reported to the ISP of the sender if at all possible. It sometimes takes some work to dig through the headers but if you do there are a couple of good resources for tracing it back to the originator:

For domain names (*.com, *.net, *.org, *.edu) use:

http://www.networksolutions.com/cgi-bin/whois/whois

For IP addresses (xxx.xxx.xxx.xxx) use:

http://www.arin.net/whois/arinwhois.html

Typing the information in will lead you to an email address you can contact to report them. Of course there's always the delete button.

Ohio/Penn DX Bulletin No. 491

The Ohio/Penn DX PacketCluster
DX Bulletin No. 491
BID: $OPDX.491
December 25, 2000
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W1DAD, WB2YQH/WB2RAJ & The 59(9) DX Report, W3UR & The Daily DX, WA4FFW, N4AA & QRZ DX, K5LBU, N5VT, K8YSE, N9AG, CE6TBN, CU3AN, DF2SS, DJ5AV & DX News Letter, DL3APO, G4FRE, IN3QBR, PA3EPG, PS7AB, VK4EJ and The ARRL Newsletter for the following DX information.

SPECIAL EDITOR'S NOTE: WOW! Where did this year go? Anyway, my family (wife/OPDX's chief proof-reader Linda, Teddy [TJ], Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy Holiday and Season's Greetings". Also, we would like thank the many who have contributed information over the year (there are too many to list). REMEMBER, without them there would not be an OPDX Bulletin. I would also thank the many who sent holiday greetings. I tried to answer some and wished I could answer each one of them individually, but it would take a huge amount of time. You would not believe the amount of E-mail I receive..... 73 and Have a Great Holiday de Tedd KB8NW

JUST A REMINDER! This will be the last week for qualifing to achieve the "DXCC Millennium Award" certificate by working 100 different DXCC entities on the ARRL DXCC List. This award is available for ARRL members and non-ARRL members. NO QSLs are required for this award. Details and "DXCC Millennium Award Application" can be found on the ARRL Web page: http://www.arrl.org

3D2/ZK1 ACTIVITY POSTPONED. Last week we mentioned that Dan, N6PEQ, would be active between December 20th and January 6th from Fiji and the South Cook Islands. However, several sources report now that Dan has postponed his operation and hopes to make the trip in the spring or summer of 2001.

3Y0, BOUVET. Astronaut Chuck Brady, N4BQW, continues to be active daily during various times mainly on 20/15/10 meters. His suggested frequencies are: 3795, 7095, 14195 (Rx split 14200-14210), 21295 (Rx split 21300-21310) and 28495 kHz (Rx split 28500-28510). Also mentioned were 1.8 MHz

and 50 MHz which will become operational later and only by pre-arrangement with 3Y0C. His activity has been mainly SSB, but when asked about CW he replied that it will also be covered later. Currently, Chuck is running 700 watts into a G5RV antenna. He has Yagi beams, but these will be installed later. His pilot station is Dennis Wells, ZS1AU. QSL via WA4FFW. Also, watch the following Web page for updates: http://www.qsl.net/zr1dq

4U, UNITED NATIONS HQ. The station 4U1UN was once again active this past weekend. This time the operator was Fritz, DL4TT, and he was active 80/30/20 meters.

5X, UGANDA. Graham, 5X1GS, was active on 28370 kHz between 1030 and 1300z listening split. QSL via WB2YQH.

7Q, MALAWI. Kaz, 7Q7KZ, has been active on 21290 and 28450 kHz. Check after 1200z and again after 1800z. QSL via JA2LZF.

9M6, EASTERN MALAYSIA. Peter, PB4CC, is expected to be active from Sarawak as 9M8CC now through Janaury 6th. His activity is to be sporadic on 20, 15, 10 and 6 meters. QSL via PB4CC: Peter F. Borsboom, De Kroon 10, NL-3181MD Rozenburg-ZH, The Netherlands. For updates, check his Web site at: http://www.qsl.net/pb4cc

A5, BHUTAN. Glenn/W0GJ and his son Mark/N0MJ of the 2000 A52A DXpedition will once again be on the air. This time they will use their own personal callsign A52GJ and A52MJ. Activity will be between December 29th and the early part of February.

C5, THE GAMBIA. Reports state that Mike/DL2OE and Hans/DL7CM will be active February 20th through March 5th as C56/homecall. Activity will be on 160-6 meters CW, SSB and RTTY, using only 150 watts. QSL via their respective homecall.

DU, PHILIPPINES. "The 59(9) DX Report" reports that Sam, LA5FHA, will be active as DU1/LA5FHA until January 20th. Activity will be on all bands CW and SSB. QSL via LA5FHA.

DX EDITOR RETIRES. Michael, DJ5AV, of the "DX Newsletter" reports that he is finished being the editor of this DX bulletin after four years of work. He states that he would like to spend more time with his family, with travelling and with DXing. OPDX would like to wish Michael the best and thank him for his past input to the OPDX bulletin and DX community. There was no mention if anyone at DARC would pickup the editor's position.

FO & FO0/M, FRENCH POLYNESIA AND MARQUESAS. Look for Wulf/DL1AWI, Mat/DL5XU, Peter/DL3APO and his wife Birgit/DG0OBN to operate from Rangiroa (OC-066) in the Tuamotu Archipelago group from January 27th through February 10th. Peter informs OPDX that he will celebrate his birthday there! After this activity, only Wulf and Mat will go to Nuku Hiva, Marquesas (OC-027), and be active from February 11-28th. They will be active on 160-10 meters CW, SSB and some RTTY, also probably SSTV. Peter states that in their baggage are 2 FT-890, 1-kW-PA, vertical, wire and TITANEX LP 5 antenna. The callsigns are unsure, but they hope to use

Wulf's, FO0AWI, and/or Mat's, FO0XUU, callsign from their 1999 operation or CEPT license FO(0)/homecall. Logs will be available after their activity at the following Web page: http://www.radioklub.de/cgcg
QSL the Rangiroa operation via the bureau or direct to DL3APO: Peter Kohde, Wurgwitzer Str. 36, 01187 Dresden, GERMANY. QSL the Marquesas operation via the bureau or direct to DL1AWI: Wolfgang Ziegler, Arno-Schlothauer-Str. 15, 99842 Ruhla, GERMANY

IOTA NEWS.....
OC-135. Steve, VK8AM/VK4EMS, is now operating from Bougainville Island as P29BI in his very limited spare time. He will be active on all bands (except 160m) CW/SSB until the end of January. He was spotted on 14010 and 7005 kHz after/around 0945z. QSL to VK4EJ: Bernie McIvor, 30 Brennan Parade, Strathpine QLD 4500, AUSTRALIA.

JD, MINAMI TORISHIMA. Katsumi, JD1BCK, has been keeping the folks happy on 15 meters SSB after 2330z. QSL via JM1TUK.

JY, JORDAN. Ali, JY4NE, has been active on 10 meters between 28400 and 28420 kHz between 1230 and 1530z. He then moves to 20 meters after 2300z. QSL via KB6NAN.

MILLENNIUM ACTIVITY. Look for "Millennium" station EI2OOO to operate over the holidays. The station will be activated by the Emerald Isle Contest and DX Group (EI9I) on Christmas Day, December 25th, and New Year's Eve, December 31st. Operations will take place in the western part of Ireland on HF, CW, SSB and PSK31. This special callsign was assigned by Irish authorities to mark the Year 2000. QSL via the bureau.

MW2, WALES. David/WW2R, RJ/GW5NF and Tim/G4VXE will be active as MW2I on RTTY during the ARRL RTTY Contest, January 6-7th. All QSLs go to WW2R.

NEW OFFICERS. The SouthWest Ohio DX Association (SWDXA) is pleased to announce the officers for 2001:
President-for-life: Bob Eslaire, W9UI
Vice President: Rick Burdick, K8WWA
Secretary: Don DuBon, N6JRL
Treasurer: Steve Bolia. N8BJQ
They will be announcing the particulars for the 2001 Dayton DX Dinner soon.

OD, LEBANON. Puzant, OD5NH, in Beirut has been active on 75/17/12/10 meters during the past week. Check 10 and 12 meters on SSB between 1530 and 1730z. Check 18145 kHz after 1730z. He was heard on 3799 kHz around 0045z. QSL via: Puzant Azirian, P.O. Box 80903, Beirut, Lebanon. OD5NJ was also active. He was 28515 for about an hour between 1430 and 1530z.

P5, NORTH KOREA. The much anticipated operation which was going to take place next week (Janaury 7th) may not happen. "The Daily DX" reported the following this week: "The much-anticipated multi-national North Korean operation, which was announced in mid October, which was first scheduled for late October then early January 2001, has been scrapped. The North Korean Organization for Army support is now refusing the use of any

transmitting equipment during the Official Opening of the Educational center, which was scheduled to take place on January 7, 2001. Obviously this is a disappointment to the organizers of P5UK and the DX community."

QSL INFO AND NEWS.....
Once again your editor (KB8NW) must repeat that I am NOT or have ever been the QSL Manager for 5R8O. Same databases continue to have me listed as manager. Please correct. The QSL Manager for 5R8O is via 5R8FL, Box 5005, Tananarive, Madagascar.

Ben, PA3EPG, reports that he is now the new QSL Manager for 4K9C (Boris). Boris operates CW most of the time. Ben states that he has the logs from October 30, 2000 and later. If you needed 4K9C confirmed after that date please send the QSL card to him. He is also QSL Manager for 4K5CW. His address is: Ben van Leeuwen, Zwolseweg 57, 8181 AC Heerde, The Netherlands.

Gabriel, CU3AN, states that after January 1, 2001, he will accept ONLY direct QSLs. The reason given, "THE BUREAU IS VERY COSTLY" and the Azores do not have a bureau. The bureau for the Azores is via Portugal/Lisbon.

Abdollah Sadjadian, EP2FM, informs OPDX that he has received many reports via E-mails that many QSL cards over the last 3 years sent to him have failed to arrive. He states that he always sends out replies the same day he receives a card direct. So, if you have not received your QSL Abdollah wants to know via E-mail at: as@neda.net

Ronaldo, PS7AB, reports that the Brazilian amateur radio addresses search engine is available at: http://www.cwsp.org.br/callsrch.htm
The database is updated by the users and it intends to be as trustful as possible.

QSL information for TI9JJP is via TI2JJP: Jose Pastora, P.O Box 2048-2050, Costa Rica, America Central.

SPECIAL EVENT. Special event station K1D will be active now through January 6th to celebrate Kid's Day (January 6th) and Amateur Radio Awareness. Look activity on 28400, 21310, 14270 and 7230 kHz. The operators will be Peter/ W1DAD and Jeanne/K1MOM Schipelliti, 7 Dearborn Ridge Rd, Atkinson, NH 03811, USA.

SPECIAL EVENT (Update). Last week we mentioned that Frank, N5VT, would be active as a special event station to celebrate the "Battle of New Orleans" during January 1-10th (2001). He informs OPDX that the callsign to be used will be N5T. QSL via N5VT w/SASE. (Please refer to OPDX.490)

SU, EGYPT. Frosty, K5LBU (aka 9J2CF/9L1CF/3DA0CF/etc...), reports that he will be going to Cairo to visit with Andre, ZS6WPX, who is trying to get a SU9 callsign. If he does not get the SU callsign, he will operate from SU1ER as a guest operator. Andre will be here until July.

T8, PALAU. "QRZ DX" reports that Koji, JK7TKE, should be active this week as T88TU from Belau (OC-009) between December 27-31st. Activity will be on 80-6 meters. QSL to JK7TKE, via the JARL bureau or direct to: Koji Fukui,

1840-5, Izumi-cho, Tokorozawa-city, Saitama 359-1112, Japan.

V4, ST. KITTS AND NEVIS. Volkmar, DF2SS, will be active as V47SS now through January 6th. Activity will be on 160-10 meters, plus 6 meters. He was spotted this past weekend on 3505 kHz at 0215z, 7008 kHz after 0230z, 18075 kHz around 1930z, 14009 kHz at 0355z and 10106 kHz after 2315z and again after 0400z. He states that he will be looking for JA stations beginning 2130z on 14008 kHz. QSL via DL2MDZ, via DARC bureau or CBA (ok in the latest CB CD only): Rainer Kuehnberger, DL2MDZ, Hofer Str. 54, D-95233 Helmbrechts, Germnay.

VK9/C, COCOS KEELING ISLANDS. A few sources reports that Ed, AA4EH, is expected to spend a few days here as VK9CEH. Activity will last until December 30th, mostly on CW on 160-10 meters. Check the lower bands during his sunrise/sunset. QSL via AA4EH.

XV/3W, VIETNAM. There is plenty of activity from here. Shim, XV3AA, has been active on 15 meters SSB. Check around 21220 and 21270 kHz after 0000z. QSL via JA6UGH. Tom, 3W7CW, has been active on 40/30/20/15 meters CW between 1500 and 1630z. QSL via SP5JTF. Also, look for 3W6LI on 20 and 10 meters SSB. Check 14185 kHz around 2200z and 28448 kHz after 0900z. QSL via IK2DUW.

XW, LAOS. Mauro, IN3QBR, informs OPDX that by the time you read this he will have left Shianoukville (were he was active as XU7AAZ) and arrive in Vientiane, Laos. He states that he should be active on the air during the afternoon of December 27th as XW3QBR.

Terry,
the 746 will not key the 220,
the 220 will damage the 746 you need the mfj keyer to
handle that chore. Donnie

Nostradamus was correct - Dubya hasn't the intelligence to poor pi** out of a boot if the instructions were written on the sole. Not to blame him, he was born rich and daddy has orchestrated his entire life. Look at his pattern of self-medication : Cocaine, Alcohol, etc. Whenever he gets stressed, daddy isolates him back at his ranch. Chaney [daddy's man] is going to be the real power behind the republican owned supreme court appointed presidency. I wonder what kind of spin the republicans are going to use to cover the fact that bush lost by over a half-million votes ??? He is already trying to blame the future recession on the democrats. All of the stock markets are down since dubya's appointment, and Greenspan isn't buying the bull the republican's are shoveling. The village idiot is probably going to have a nervous breakdown with all of the responsibilities thrust upon him. This has never happen to him before in his life - he has always been just a figurehead because they owed daddy favors. He can't delegate everything even though he tries. Doesn't the "W" in his name stand for wasted ????

Here at Classic Stars Radio Online, we have a new broadcast schedule for the new year! New shows, new times, new descriptions. So much is new! Tune in sometime during the next year and enjoy old time radio as it was broadcast oh so long ago.

http://www.titanicstreams.com

Adora

January Schedule of Shows

Welcome to our January broadcasting schedule.
Starting on January 3rd, tune in for these shows at these times!

A CSRO Special Event! Click Here!
http://www.titanicstreams.com/zero.htm

Sunday Nights

7:00pm - 7:30pm EST : The Jack Benny Program
7:30pm - 8:00pm EST : Amos 'N Andy
8:00pm - 8:30pm EST : The Fred Allen Program
8:30pm - 9:00pm EST : Six Shooter
9:00pm EST : Les Miserables
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Monday Nights

7:00pm - 8:00pm EST : The Aldrich Family
8:00pm - 8:30pm EST : Escape
8:30pm - 9:00pm EST : The Bing Crosby Show
9:00pm EST : Les Miserables *Repeat of Sunday*
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Tuesdays Nights

7:00pm - 7:30pm EST : You Bet Your Life
7:30pm - 8:00pm EST : One Mans Family
8:00pm - 8:30pm EST : The Haunting Hour
8:30pm - 9:00pm EST : My Favorite Husband
9:00pm EST : Lux Radio Theater
10:00pm EST : Suspense

10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Wednesday Nights

7:00pm - 8:00pm EST : Inner Sanctum Mysteries
8:00pm - 9:00pm EST : The Magic Island
9:00pm EST : The Campbell Playhouse
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Thursday Nights

7:00pm - 8:00pm EST : George Burns & Gracie Allen
8:00pm - 8:30pm EST : The Adventures of Superman / Guiding Light
8:30pm - 9:00pm EST : Our Miss Brookes

9:00pm EST : RE-LIVE THE LEGENDS :
Listen Each Week In January For An OTR Cary Grant Episode

10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Friday Nights

7:00pm - 8:00pm EST : Fibber McGee & Molly
8:00pm - 8:30pm EST : The Bickersons / Chandu The Magician
8:30pm - 9:00pm EST : House of Fear
9:00pm EST : Phillip Marlowe
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

Saturday Nights

7:00pm - 7:30pm EST : Quiet Please
7:30pm - 8:00pm EST : The Clock
8:00pm - 8:30pm EST : X-Minus-1
8:30pm - 9:00pm EST : Dragnet
9:00pm - 10:00pm EST : All Star Western Theater
10:00pm EST : Suspense
10:30pm EST : The Whistler
11:00pm EST : Lights Out
11:30pm EST : The Shadow

3725. Murphys Law Theory!!! (Read)

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-25 00:26:47 UTC
From: "@!@" <ezypezy@ureach.com>
Message-ID: <bvw16.8555$KY1.23037@news1.rivrw1.nsw.optushome.com.au>

Murphy's Comment on the Origin of Murphy's Law

"Murphy's Law was not propounded by Murphy,
but by another man of the same name."

3726. Re: Intelligence: Gore v. Bush

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-25 00:29:44 UTC
From: 23skidoo <23skiddoo@house.com>
Message-ID: <Yxw16.190423$U46.5857193@news1.sttls1.wa.home.com>
Source record: 97144

Typical republican spin - Al Gore was in the forefront of establishing the internet - regardless of how you want to slant it - It was his congressional committee that established the internet from Arpanet. For the record - Gore never made the statement that he invented the internet - That one came from a Republican spin doctor - and as a typical ignorant republican - you swallowed it hook, line, and sinker. When are you going to get it through your heads that the republican party considers you little people expendable cannon fodder and as gullible sheep. WAKE UP !!!!! We the little people are not going to see any tax cuts - we have to make up the shortfalls that are gong to occur when the rich folks get their tax cuts. Dubya's idea to bolster the military is to award multi-billion dollar contracts to daddy's friends. The village idiot was never in the military - that was for the little people. Why should he help the common man ?? He is one of the Golden children and considers us only as inferior servants to keep his standard of living up in the clouds.

As part of the 1% I am looking forward to my tax cut, we started that internet invention story to divert your efforts. It worked pretty well didn't it? Of course we know you little people are not going to get anything, that was our plan all along. See, you were absolutely correct in all of your wildest dreams. You haven't seen anything yet, we are taking all the money from welfare recipients to give to our friends in the military industrial complex so they can become even richer. See, I can tell you now that we have plotted this from the very beginning. Besides, your internet connection is being traced as we speak and the IRS will commence their audit of your insignificant holdings on Tuesday. What little you have left will be given to the rich! But! doesn't it make you feel better to know you were right?

Hi Nick,

The first thing to do is get rid of MS Outlook!! It's a horrible product that should never have been foisted upon the world.

The second thing to do is find better mail and news readers. Qualcomm has a free version of their Eudora mail app, and Forte has a free copy of Agent (newsreader). Both of these progs beat MS Lookout for functionality, ease of use, and security. You can also use Netscape for mail/news, but be sure to disable java in mail & news messages...also, if you can, find an older version (4.X will work nicely)...the latest version (6) is a big hunk o' poo.

The third thing to do is keep your virus sigs up to date, and scan any and all attachments you receive before looking at them. It doesn't matter whether it's from a total stranger, or from your best buddy (who may have inadvertently sent you an infected file)...scan them all.

Chances are, if you use Lookout, you probably also use MS Word. If you do, be sure to disable macros, otherwise an innocent looking document can take advantage of some security holes in the crappy program, and have Word do nasty things to/with your computer.

Regardless of what some tagnut down at Compusa may tell you, Microsoft is not your friend. They do not make computing more fun, nor do they make people more productive. They sell crappy, half-baked products that can often create more problems than they solve.

As for people getting their hands cut off for sending you a virus (and/or reporting them to an ISP), keep in mind that if you receive a virus these days, it's most likely been spread with Outlook. The person who sent it to you had no idea (s)he was doing so. Some simple lines of code the (s)he rec'd in an email had Outlook do it all on its own.

The *only* person to blame if your computer gets a virus is the person looking back at you from the mirror...

???

Even the liberal press harped and harped on the popular vote. Seems
they don't understand that the electoral votes have a play. If Gore
hadonly been able to get the votes of his kinfolk, ...

He
> is already trying to blame the future recession on the democrats.

Huh? The mainstream press has been ignoring wall street for a whole
year, unlike the 92 election where we had 'the worst economy in 50
years." Now with the "impending" dubayew presidency and a souring
economy, the liberal press FINALLY springs in to action.....

All
of the
> stock markets are down since dubya's appointment

Since summmmmmmmmmmmer!

How do you 'disable macros' in MS Word? I can't find the option or
setting that does that. I have an option 'checked' that says to protect
against macro viruses but that's all I can find.

Also in with regards to using MS Word it's a good idea to make your Normal template read only. Some viruses overwrite the Normal.dot file and use it to replicate themselves. Use the Find...Files command in Windows Explorer and find the normal.dot file and change the attributes to read only. If you want to change it down the road then you can change it back.

That's the only one.

You can disable windows scripting host.

Rename C:\windows\wscript.exe
to something like wscript.disable.exe

There are few applications out there that take
advantage of windows scripting host. And the
majority of those are viruses.

For 1.9 GHz, you should probably use "polyiron" instead of ferrite.
Available from suppliers
such as Emerson and Cummings.

As an Evangelical Christian, AND an enviromentalist (and the two are NOT mutually exclusive), although I don't agree with with that quote, and I'll have to pick up a copy of his book to read it in context, I can saw that, in part, I agree with his sentiment.

I've met Christian after Christian who hold to the enviromental view that "The world's going to burn up anyway, so what's the point of doing anything to save it"....perhaps that's where he's coming from.

Nostradamus never wrote the "village idiot" prediction.
It's a complete hoax.

Believe it or not, though, he did write

The undersigned to an infamous deliverance,
And having contrary advice from the multitude:
Monarch changes put in danger over thought,
Tight in a cage, they will see each other as opposites.

That could easily be stretched to apply to the history-making
election, where the outcome was contrary to the popular vote
and the transition was delayed, if not endangered.

For details, and verification that it's real, see
http://www.songworm.com/prose/nostradamus-2000/

I stumbled across it completely at random while
checking out the other one.

Charlie, You should be more careful about your slanderous statements about KT4TR. First, KT4TR never read any credit report over the airwaves, he simply read public documents about your fellow friend X-WB2OTK. These reports were absolutely true and copies have been circulated to many, who will certainly testify as to their validity. May I remind you that Rich Whiten still has an outstanding warrant for his arrest in the state of Florida.
The matter about the so called Patterson Trial, You should have brought some evidence and possibly the DA would have accepted your story. Florida along with N.J. has laws which permit individuals to accuse and then show proof or not. You must be very careful Charlie, You have accused me of obtaining illegal credit reports , which is a violation of law. You will be called upon to prove yourself and Iris is really going to be pissed!!!
Now about the FBI, seems that they have been to your house on more than once, and you should be very careful about spreading false information, you were informed by the special agent that you were spreading incorrect information about your good friend being a Medal Of Honor recpt. I can understand how depressed you were, and just to correct your sataement about KT4TR calling NYU, you are wrong again, he called the N.J. Board of Denistry, had you not been telling lies about where you had attended college then you would have been more credible to the amateur radio community. Sorry to hear that you have been warned about your behavior on amateur radio, those letters of warning from the FCC really are halarious.
Now be a good little boy, but be very careful about your slander, sometimes you remind me of an ole friend, just look what you made me do. Happy Holidays, Hammer007

Are we now beginning to see what hate crimes are really about? No longer happy with hate crimes, we progress to HATE SPEECH, thus stifling freedom of speech? Not in this country! I defend your right to spout this nonsense, but rest assured the day it becomes action, it is the start of a sad and bloody day.

If this is your definition of BIGOT, I proudly proclaim my bigotry. If I have to accept the title because I want children to be left alone by faggots, disdain those that would soil my religion, find distasteful those that would lead teenagers down the path of drugs and casual sex as standards. Yes! I proudly wear the mantle. From now on please refer to me with my new shining title "Bigot Fred"

Thank you
Bigot Fred

3746. Damark Warning

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-25 17:28:04 UTC
From: Radioguy <radioguy@snet.net>
Message-ID: <3A4783A4.2010402@snet.net>
Source record: 97164

Damark Warning

On 12/24/00 I received my monthly credit card statement. I noticed an unauthorized charge for $109.99 from Damark, a nationally known catalog retailer. Because they sell radios, electronics and high tech things, I thought that a warning to my friends here would be appropriate. The problem, I haven't had any contact with this company in over THREE years. I called the telephone number 1-800-597-1001 and, after playing with the automatic response system, I finally got through to an operator. I asked what this charge was, as I didn't remember ordering anything from them. A customer representative named Paula advised that it was a membership charge. I immediately told her I didn't authorize it and didn't want it. She agreed to credit my card for $103.99. I advised her that my charge was $109.99. She said the $6.00 was for shipping and handling. Shipping and handling of what? She said she would have their Consumer Department send me the forms for the $6.00 portion of the refund. The representative then asked to confirm my name and mailing address. This company had my old business address, I retired nearly two years ago, and the company's name instead of mine. Obviously, contrary to their "we tape everything message", they couldn't have verified anything for me, as 1. I don't work for the institution they billed, 2. they billed me personally and 3. they didn't even know my name. The state's Attorney General has recently filed charges against AT&T for fraudulent billing in a similar manner, so am sure they won't hesitate to go after these people. I feel sorry for those people who don't check over they monthly statements. A quick check on the Internet led me to a web site put up by an irate "customer." Their site had the exact same story as mine from 2 years ago, so this practice has been going on for a while. So be wise to Damark and to your monthly bills, as other companies have employed these same misguided tactics. With the holiday upon us stay sharp and be a wise consumer

Pete

Much as it chaps your ignorant hide, Gore did indeed lay claim to
"creating" the internet in a 1999 interview with CNN. As pointed out on
http://www.snopes2.com/quotes/internet.htm, for example:

many of the components of today's Internet came into being well
before Gore's first term in Congress began in 1977, and it's
hard to find any specific action of Gore's (such as his
sponsoring a Congressional bill or championing a particular
piece of legislation) that one could claim helped bring the
Internet into being, much less validate Gore's statement of
having taken the "initiative in creating the Internet."

In fact, similar information is available from many reputable sources,
and you should really have checked out the facts before shooting off
your mouth and appearing to be very ignorant.

Thanks for that warning. I used to regularly receive Damark catalogs in the mail, but they always struck a chord of suspicion in me when I looked them over.

Now I know why.

Bluntly, I think Gore is the worst kind of liar. However, reference the Internet, please read the Special September 1989 issue of Scientific American. Gore writes about the future of the Internet, its growing architecture, increasing utility, and growth long before most even knew of its existence.

While not its creator, that distinction rightly belongs to Vint Cerf among others, Gore should be given some credit for recognizing the potential impact of the Internet.

In Broward county, they counted every under-vote as a vote for the party pretential candidate. In Palm Beach county they the exact opposite position. Even with an error rate of 3 to 5%, the machine count is a more objective way to assess the intent of the voters.

When you hand count you introduce many other subjective errors, reducing the over all accuracy of the vote. But worse then that, if you only hand count in selected counties, you in fact run the risk of to some degree disenfranchising voters in all other counties.

Call your credit card company and place the charges in dispute and don't pay them. This is obviously a scam. by this company.

About as much credit as me and the huge number of people who were using the
"Internet" in 1989.

No but you sure are showing us all what kind of foulmouthed louse you really are. So to you talk like that to the welfare case worker. Sounds to me that you are the real white trash, or black trash for that matter. It really doesn't matter to me what race you are, but I do know that judging by your responses in here that you definitely are a loser who has the vocabulary of an 80 IQ moron. You should be proud of that vocabulary, did you receive it in the public fool system. You can call me all the F words you want, it only shows what kind of fool that you are. Not only that, but I doubt that the NAACP would even support you with your vitrolic and moronic behavior. Furthermore, anyone who has studied history knows that the NAACP was founded by members of the American Communist Party early this century. Of course, over the years they have supported communist aims of having the black people engage in violent behavior against whites. While there is no excuse for not giving blacks equal treatment, its pretty hard for me to have any sympathy for an organization that supports and endorses communist aims. Oh, and furthermore anyone who knows who Kivie Kaplan is would realize that he is not black at all but rather of Jewish origin. This is important because Kivie Kaplan was the President of the NAACP while Roy Wilkins was its national secretary. So keep on showing your ignorance Braindead Falstaff. You are making your people look very foolish. As far as your little threats go, you are no better than any of the KKK racists that you claim to be against. Matter of fact you should get a membership in the old Highlander Folks School in Tennesee.

Showing that lack of intelligence again Full of Stuff. Must be about time
for your welfare check to get shut off again. You would have severe
difficulty in earning a living with that attitude but then again why worry
when your welfare check will be here the first week of January.

There really was a Murphy.

His name was Edwin Murphy, and he worked for GE in Schenectady. They were working on a control system for rocket sleds or some such in the early '50s. The test site was in the southwest (Edwards AFB, I think) and he sent a control system with written instructions on assembly. There was one part that could be assembled two ways - one of the correct and the other incorrect - and of course the assemblers at the test site did it the wrong way, despite the clearly written instructions, match marks, etc. And of course it took a long series of phone calls and correspondence to determine that the reason "it won't work" was the obviously missassembled part.

Murphy said something like "if there is a wrong way to do something, somebody will find the wrong way and do it". This was later refined into the famous "if anything can go wrong, it will"

In typical fashion, the real Edwin Murphy (sometimes erroneously called "Edsel") never saw a penny for his famous quote.

Bravo Fred. They can call me a bigot too since I dont go along with their faggot loving lifestyle. I don't follow their queer death wish that many young people like so much. Of course, with all their so called enlightened education you would think that the queers would know better than sticking other mens penises up their anuses. Of course, many of these vile fags love to molest children and that is why they have tried to infiltrate the Boy Scouts. The QUEER GROUP called NAMBLA supports homosexuality with children down to the AGE OF EIGHT. That is why they support queer objectives. I'll be dammed if any fag touches any child I know because there will be reprocussions for their perversions. These fags also vilify traditional religion with their liberal supporters. Family values are shunned and the Boy Scouts are the enemy of these fag lovers and their leftist pervert supporters. Fags are pretty much lower than animals and even something you expect from the Jungle Lifestyle where anything goes. Liberalism is really the anything goes mentality. We can all see the damage it has left us over the past fifty years. People its time to fight back against the barbarians that have come through the gate in their support of false Enlightenment created by their GOD, LUCIFER.

3766. Hiram, GA, Amateur Busted by FCC

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-25 22:05:08 UTC
From: No User <no.user@anon.xg.nu>
Message-ID: <436c11ea832815cd9e36dedec055ac30@anon.xg.nu>
Source record: 97184

See: http://www2.arrl.org/news/enforcement_logs/2000/0706.html

FCC's Riley Hollingsworth issues a Notice Of Intent to designate a
Hiram, Georgia, ham radio operator's license for revocation. Hollingsworth
was quoted as saying the operator totally lacked any understanding as to
the basis & purpose of amateur radio. The Hiram, Georgia, operator of
W4AMP repeatedly has used grossly obscene and profane language on
amateur radio frequencies. The same operator was busted last year for
intentional and malicious interference to other amateurs on 75 meters.

This message did not originate from the Sender address above.
It was posted with the use of anonymizing software at
http://anon.xg.nu

You throw that term around rather loosely. Before I respond in kind, please give me your definition of racist. By no stretch of imagination can I make the dictionary definition fit what I believe to be your definition. Ergo, rather than put words in your mouth, please be so kind as to forward your definition.

I don't believe I could have made it any clearer, however I am open to
suggestions as to how I can convey the thought to those too ignorant to
comprehend the simple statement I made.

: Oh come on now. We have to listen to you right-winged cry babies for 8
: years now. A little thin-skinned arn't ya?

Not on a radio NGs.

: Get used to it. The BushOnCrack administration is going to be more
: laughs than SNL.

Actually it will be your side that gets a little screwy. That is why
Rush likes it when liberals are out of power, they make for such
great material.

I have only one goal. To crush the American Left Wing like
Rome crushed Carthiage.

: >
:
: You can't be serious?! Do YOU actually think this DAN QUAYLE reject is
: going to repeat? His DAD didn't and he will follow in the footsteps of
: his dad. He has had dad's coattails to ride on all his life and he
: will not stop in 4 years!

That is your first mistake, to under estimate GWB. Go ahead,
keep telling yourself that he is dumb. I love it when someone
under estimates me, that is usually when I finish them off.

: Dubya will flop badly. He will cost the Republicans the house and
: senate in 2002. In 2004 the Democrats will control the legislative and
: executative branches of government.

Keep dreaming. The Left is terrorified of groups like the
Greens. Look at how Hillary keeps making jokes about
having someone kill Nader. They know that the democrats
are ripe to split into several parties. It is only fear that is keeping
them together.

: I have saved YOUR message so I can RUB it in your FACE in two and four
: years!

We will look you up.

da
: still won"
:
: You could have very easily typed that message without the racial
: overtones. But you chose, in true Republican fashion, to show
: your "true colors" so to speak!

You are powerless. The left does not believe in owning weapons,
leaving their protection to others who they bribe into service (police
and military, there are few left wingers under the age of 45 with military
service).

Just remember half the country voted against Gore. And after the recount,
many others saw how Gore managed and wished that they could have changed
their vote for Bush. The worst thing that would could have happened to the
Left would have been for Gore to have won. He is another Nixon.

Sore/Loserman 2000

Now take this over to another NG.

: Randy, do you think I, as a pro-Gore Independent, am wrong in wishing
: GW the best of luck. Let's face it, GW is in for 4 and don't you feel
: he needs everyone's support instead of constant disdain? If we Gorkins
: have to bitch, let's do it about the REAL perpetrators of this
: travesty-the FIVE crotches on the Supreme Court. Had they stayed the
: hell out of this, the recount would have given Uncle Albert the win.
: Do you agree?
: AF2Y

It is looking like that Prince Albert would have lost even Miami
if a total recount had happened. And vote totals are now shifting
around the country, as states retotal their counts, to the point that
Bush may also have the popular vote.

In 4 years, it will be 7 conservatives on SCOTUS.

: AF2Y

We knew that from the very beginning. GWB has always been
a moderate. It was only the Left Wing who called him conservative
as a means to scare their fellowers into voting for Gore.

All that we asked of GWB was that he understand us, accept us. We
are allowing him the freedom to be moderate. We are not even asking
for him to push our agendas. It does not matter.

But I do not expect you to understand that or why we feel that way.
In the end we will crush you as Rome crushed Carthiage anyway.

HA you think that is bad i had to replace a hairpin match on a mosley 6 meter
vertical and it cost me $23 for the part and shipping and handling and all it
wound up being was a piece of 1/8th inch aluminum rod bent into a U shape and a
small loop bent into one end to go over a bolt
you guys dont know what poor customer service is till you deal with mosley it
took me 6 weeks to get that little piece of aluminum rod and every time i called
to check on it they gave me some story or another
a year or so a go i ordered a new 2 meter yagi from them it took 8 weeks to get
it from them then too
atleast when i order parts from cushcraft and it takes longer than suggested it
was shipped with no charge at all
i think we all forget that these customer service people may not be hams and may
be new and dont know the antenna and we have been out fighting with it and we are
short on paitents and tack so we come in here and blow off steam
so calm down and relax before dealing with people on the phone
also try email i have very good luck with customer service via email

Hey John - if you want to take it out of context and spin it, here is the original quote from the CNN interview:

"During my service in the United States Congress, I took the initiative in creating the Internet. I took the initiative in moving forward a whole range of initiatives that have proven to be important to our country's economic growth and environmental protection, improvements in our educational system. "

As I said previously, then Senator Gore was on the committee(s) that helped to create the internet into the super information highway it is today. NO WHERE DOES HE STATE THAT HE "INVENTED" THE INTERNET, HE JUST TOOK THE INITIATIVES FACING CONGRESS AND RAN WITH THEM. I imagine that following your warped logic, Gore must have also invented the educational system, as well as creating our economic system.
Shooting from the hip makes you look like a DORK !! Why do you persist in believing the spin doctors of the republican party ?????

You made the claim; now you provide the citations. Name a bill Gore introduced that somehow got the Internet going, or even easier, name one of those committees to back up your claims (be aware that I will investigate any claims you make, so be vewwwy, vewwwy careful).

Since the Internet was largely in place prior to 1977 (when Gore was first elected), this ought to be interesting to see you rationalize (or "spin" as you would call it).

But then, some people persist in believing that the entire U.S. space program was faked by clever special effects experts. I suppose it's only reasonable to find that other people also accept the fiction of an Al Gore Internet.

>particular office. It can be that no vote was cast, however, the
>manufacturers of the counting machines testified under oath that their
>machines have an error rate or 3 to 5 %.

Under what conditions? All machines? First 100 runs? Second 100?
New machines? Previous used and stored machines? Before scheduled
cleaning and maintenance? After?

Now consult a statistician to determine the error rate of hand-counting.
Or just consult my mom -- our garage was a neighborhood Polling Place
back in the 60s; after the polls closed, she and some other neighbors,
all elections officials, would stay up into the wee hours of the next
morning counting the precinct's ballots by hand. Remember, these women
had begun work quite early the previous day. Errors were made, not
necessarily for subjective reasons, but due to fatigue.

Why do you think machine counting has almost universally replaced hand
counting?

>Just because you inherited your entire net worth

That just shot your credibility in half. Every dollar I have I
earned. Everyone in my immediate family is alive and well. They
all say "hi" and "Merry Christ-Mass" to you!

>doesn't make you qualified to be anything but someone who
>knows everything there is to know about nothing, and nothing about
>everything.

Ah, the power of the calm and thoughtful pen and how it can drive
an opponent to strike back with nothing but personal attacks!

Speaking of what I know, I do know more math than you, and I know
that I can out-swim you in any event, and can probably even win
you in a game of chess; would you care to play a game by email?

>Now maybe you know what an undercount is .

I'm the one who first provided an example for you below:

>"Jeffrey Herman" wrote:
>> Voters have a right to cast a ballot in which they've voted for no
>> one in a particular category; maybe they're undecided or have no
>> preference or they just don't care. The result is an under-count, a

I find myself wondering why you didn't buy a piece of aluminum at Home Depot or somewhere -- or use a piece of aluminum ground wire! -- and make your own? Worth not having the hassle, from what I read here about the company. Faster, too.

Cortland

Better yet, wait till you pull in to the corner gas station to fill up,
and find that it is closed due to no supply. Then you find the rest of
them also closed for the same reason......When you finally find one that
has gas you find they won't sell it to you unless you do their bidding,
which is to pay extortionary prices in advance and then you are limited
to whatever amount they feel like letting you have.....Remember 1973?
That was openers, the ante....

Yes, I do remember 1973, when the owner of the local gas
station was a friend of ours, and he bitterly complained that
the "shortage" followed by the escalator rise in prices did not
only not put any more money in his pocket but served to
alienate his customers. He finally retired and got out of the
business.

Did any other states but California have "odd" and "even"
days?

Because Bush, an oil man, has found another way to cut supplies and drive the
prices up :)))

I am always amazed at the conceit of mankind. We are a Paltry few upon this planet. Mt. Pinatuba blows and creates more pollution than mankind has since the beginning of their puny existence. How arrogant are we that we think we could upset the balance of the earth. The two types of people who promulgate this nonsense are the city dwellers that have never worked a field, prayed for rain, or harvested a bountiful crop. The second is the misguided "Earth is our mother" crowd who's stated purpose is to rid the earth of mans infestation, at that point all returns to mother earth and all is right with the universe. We who farm and work with the land know it is a partnership, we tend the land and the land provides food. No mystical spirit hidden in the bushes. Simply the rewards of hard work. If we leave a field lay fallow, within a few short years, mans marks are impossible to detect with the exception of a few fence lines or rotted out buildings. The earth is far more capable of healing its self than man is of destroying it. However, there is no money to be made in this truth, there is money to be made in the pseudoscience and phony ecological movements. There is the ability to destroy from within, the might of a great nation, all in the name of "mother earth".

Remember the horrible Alaskan oil spill that would destroy Alaska for centuries? Try to find any trace of it today! What it did do was to give employment to a bunch of duck wipers that had little or no effect on anything. It further allowed the raping of an American oil company in the name of "mother earth". We have put up with increased prices because it was the feel good thing to do.

Greetings...

I STILL have up for trade a real nice Kenwood TS-440SAT. Looking for a bit 'beefier' rig to use as backup for my FT-920. Will consider any and all trade offers for HF gear. The Kenwood is in very good condition, but has one problem...sometimes the antenna tuner acts a bit flaky and won't tune what the tuner in my FT-920 will. Will include a Kenwood MC-50 Desk microphone in nice condition for the right offer. Also includes original box, manuals, and supplemental info on the rig from INRAD. Oh yes, YK-88 CW filter installed also.f Not really interested in selling this rig, looking more for a trade. Whatcha got to offer? I had this up on eBay, but the high bidder is not responding, and as I said, I'd rather trade anyway!!!

Tnx, es 73 de N9LXX~~~

Source record: 97114

Okay this may be a little off topic but that's the point of a .misc group right?

I'm a bit of a cheap skate and I need to add wiring to my VW bus to power a 2 meter radio. I have a large supply of "romex" style solid core house hold wiring. I was wondering if I could use it instead of the stranded auto wire? I realize it would be a lot harder to install but at this instant I have more time than money. Would the rather long run effect it all, as the battery is at the very left rear of the engine compartment and the radio will be next to the driver. It's a '62 but it has a 50 amp motorola alternator in it if it makes any difference. Occasionally I'll have a CB installed when I am traveling in a caravan with non friends, would it effect the lower frequencies worse than 2 meter?

Thanks,
Zane

Zane,
Guess it would depend on the size of the 'romex'. With the length of run you will have, I'd suggest at least a couple of strands(?) of #10. Larger would be better. I have no idea what the current demand of the radio is, but 'bigger' is almost always better for a power lead.
'Doc

PS - Shouldn't affect the 'other' radio at all.

Once they've done their time, let them back into society. You're coming across like the Older Brother in the story of the prodical son found in Luke 15:11-32.

Remember, ALL OF US "richly deserve our fate". But God, in His Love, has provided atonement.

After having a brief period of rekindled interest in ham radio, I'm of belief, after listeing to 80, 40 meters, the majority of the active ham community is either retired, senile, the product of inbreeding or all three.
The best conversations are with retired hams who did not vote Bush and who because of that wise choice have more active brain cells than he does.
We elected an intellectual (Gore) and got a bubba-fool..who did not win popular vote and who through influence (his brother's) took Florida before the truth could ever be known.

Why is it that of those hams who seem active on HF, this type is always
represented. They have apparently nothing to do in life except sit on
their toochie and see if they can irritate others.
Sad!

From 'Urban Legends Reference Pages"

Neither this quote nor anything like it appears in Senator Al Gore's 1992 book Earth in the Balance, on page 342 or anywhere else.

Page 342 is part of a chapter entitled "A Global Marshall Plan" and contains a discussion about publicizing the acts of companies that violate environmental rules in order to put public pressure on them to change their ways. The only reference to religion in the entire chapter is a (supportive) paragraph about the Catholic church and contraception on page 316.

Religion in general and Christianity specifically are touched upon in Chapter 13, "Environmentalism of the Spirit," but those passages are a defense against those who charge that Judeo-Christianity's conception of humankind as having "dominion" over the earth inspires "an arrogant and reckless attitude towards nature." A paragraph on page 263 is critical of some Christians whose "prophetic vision of the apocalypse is used as an excuse for abdicating their responsibility to be good stewards of God's creation."

In short, only people who haven't read this book could claim the cited quote came from it. Not surprisingly, those are the very people making the claim.

It appears that Mr. Haskell is just another extremist that hopes repeating a lie long enough will make it sound true.

It was proposed in Missouri, along with a Sunday ban on driving.
But never materialized.

I do recall, however, operators there also complaining that
though prices rose, profits did not. In fact, many pump displays
were not equipped for prices in excess of 99.9, and had to be
modified, or the pumps replaced, either of which requiring
regulatory supervision, inspection and certification. So at the same
time profits were flat, costs increased and many operators simply
didn't survive. Changes in EPA regulations at the time required old
tanks to be replaced, vapor emission controls or recovery systems to
be installed with attendant increases in cost driving many operators
out of the business with huge losses, and company interests bought
up the stations, renovated, installed grocery stores...and passed
costs on to customers.

You'd think we would have learned from 1973.

But then, you'd think we would have learned from 1929, too.

Maybe Fred is from the midwest. We know that area has considerable inbreeding which results in closed minded attitutes, scapegoating, conservative politics even when the supporter may live in a mobile home. Wasn't it ILLinois (note the ILL) and Missouri (Misery-OUR-Way) and then Iowa.. which translated means Idiots Out Walking Around.

But, they got their way. They have the village idiot as leader.. and may God help us now!

Dear QRM,

I agree with your assessment of my position, but the law must act in an "Old Testment" manner to properly administer justice, while individuals are free to act in a "New Testament" way to show mercy in their daily lives.

well, most ISP's have an abuse department. For example, at the ISP i work for, if someone gets spam, viruses, or even if they are being attatcked by someone else on the internet, they can send a message to abuse@ptd.net (ptd.net being the ISP i work for) with as much information about where the abuse is coming from, whats happening, or any other information that you have. Other ISP's "should" have similar services, usually the address would be abuse@(insert that ISP's domain here) like abuse@epix.net or abuse@aol.com. If you cant get through to an abuse address try something like postmaster@whatver.com that should get you to the mail administrator at that ISP and they should be able to get you to the right person.

Good Luck!

They were both challengers. Duhh-bya was challenging the Presidency,
Prince Al was challenging common sense.

Solid wire is not recommended because it will break a lot sooner
then stranded wire due to flexing in a mobile environment. #4
THHN is less then 40 cents a foot at Home Depot. While it does
not have as many strands as I would like it has been working
for 4 years in my car. Of course it's also strapped down tightly.

If you go with romex, make sure it can't move around. I wouldn't
use it. It's not gasoline and oil resistant like THHN.

For wire sizing see: http://www.abs.net/~the420/wirechrt.jpg

We gave up branding a lot of years ago. Is it really too much for a state, some years after a term and parole have been successfully completed, to recognize the success of the individual with a pardon? A number of progressive Northern states do this, not surprisingly those with very low crime rates by US standards.

Or are we dealing with the standard Republican approach: reduce the turnout, especially among minorities?

And Arthur C. Clark, a science fiction writer , claims he invented the geo stalletites in the late 1940's. Is his claim any less/more valid than Al Gore? I suspect if Al Gore did claim he invented the internet, his claim would be as arrogant as Clark's. Did he ever actually say that or was this just more gagels by a frustrated "Regugnacan " party?

BINGO! We don't seem to learn much from any such "lesson". One wonders what might happen when the "infrastructure" breaks in ways that can't be easily patched. Electric Power is in short supply in California and several other areas are not far behind. Can the communciations infrastructure stay viable when theelectric grid can't? Emergency generators can only take it so far.
That is only one pending possibility. No one really knows, or at least they won't say if they know, what might happen of certain terrorist groups finally consolidated their operations. And of course, there is more....

Solid wire does not hold up well to vibration. If the two meter rig doesn't pull over 25 amps, hook it to the cigarette lighter. No need to run any wire at all. If it draws over 25 amps go with some heavy stranded wire. You only need 1 wire as the body has more surface area than any wire you can install.

Uh, no.

He developed the theory of geosynchronous orbit, and the follow-on idea to the "Clarke Orbit" was the placement of radio repeaters in that orbit.

> Is his claim any less/more valid than Al Gore?

Far more. One can go back and read Clarke's original articles, while Prince Al's claim has no backing, and in fact is in direct conflict with the recorded facts.

> I suspect if Al Gore did claim he invented the internet,
> his claim would be as arrogant as Clark's. Did he ever actually say that

He made the claim that he was "instrumental in the creation" of the Internet during an interview a while back. He also claimed publicly that "Love Story" was written about he and Tipper (which was a great surprise to the author), and that his mother-in-law and his dog take the same medication, which was also proven false.

And people say that Duhh-bya is stupid . . ?

Interesting, you fail to answer a simple question, and then make some remark about flying and drinking. I do in fact fly, I have in fact been cited for being at 45,000 feet in a Lear certified for 41,000, however I do not drink as those that have known me many years will attest. Now would you try one more time to give me YOUR definition of racist? I really need to understand if I have been insulted or not, your subtle answers leave me in doubt as to your meaning.

With holding comment about Gore's apparent great SANFU concerning the
internet, he may have been misquoted or misinterpreted in the other
two cases you cite.
More likely he read "LOVE STORY " and just as some people would say,
when hearing a piece of music that is their favorite, would utter,
"hear, this they're playing OUR song."
In the second case he may have been comparing a high priced proprietary
drug with a chemically similar genetric. Often pharmaceutical companies
to avoid paying high patent fees by changing a small part of the
molecule of a drug that is available and cheap. They then avertise the
drug to physicians as if it was a huge break through in medical
pharamcology. And, sadly the price to consumers is out of this world.

However, in an older vehicle, the grounds become weaker due to corrosion
of the straps and mounting points. It never hurts to run an additional
ground back to the battery as well as grounding to a close tie point.

Ground loops will cause all kinds of problems.

I have traced the sender, it seems to be a student at the University of Illinois. I contacted the coordinator of the system and he is going to check into it.

If that were the case, I expect that he would have offered that
explanation as a defense. However, he had known the author in college,
and never expected him to disagree.

> In the second case he may have been comparing a high priced proprietary
> drug with a chemically similar genetric.

He was condeming the drug companies, claiming that his mother-in-law
paid a lot more for the same drug that his dog was taking. In fact,
neither even TOOK that drug in question! He stole the whole idea from a
Democratic Party position paper on nationalizing the pharmaceutical
industry.

California is seeing the chickens come home to roost. They have put such stringent environmental laws in place that it is almost prohibitive to generate electricity. They have been buying it from other states. OK to pollute somewhere else, but NIMBY so now they are running out of service. Too bad, I hope the whole bunch set in the dark and contemplate their support of the tree-huggers.

Broccoli Farts, if you don't like the flaming here, then get the hell off and go to a ham radio forum such a rec.radio.amateur misc. All of us used to have our flings on it until MindSpring suggested that our flaming was 'OFF TOPIC" so we QSYed as we hams say, to here. Now you, a newbie snotnose, has the audacity to suggest that slings and arrows of outrageous fortune be eliminated here? Get lost and fast. KK7HO and I created this "everything goes" forum and neither of us is going to take flack from a punk.

About Youngblood's defense of Youngblood under the name Hammer007, it is a lie to state that I went to court without evidence. You can bet your sweet bippy that the same harassing tape I played for the Clifton P.D. was brought to county court and YOUR LAWYER asked that it not be put into evidence. He seemed like a nice enough guy and your pal Lenny had been begging me to lay off, so I appeased everyone concerned. However when word reached you that I had called off the proceedings, you went on the air to make it sound as if YOU came out the victor. Could any of us have expected differently?

You had no right to meddle into anyone's affairs-mine, Rich's, Donald Anderson's and others. You carried things too far and yes, you did and do have a vicious streak. And I'll bet you still haven't wised up completely even after Herbie lost his ticket for good and your ROLLLLLLLLLL CALLLLLL went down the toilet. Our side, the great and noble Goodfellas, won by coming up with a royal FLUSH.

No, but that was a nice try. Prince Al's claim was made in reference to
his experience in Washington -- he just didn't know that the net
actually began over 20 years before he (and most people) thought it had
been invented.

It is my opinion that felons, and any others who have lost
their gun rights (felons, misdomeanor domestic abuse, those
with mental illness as declared by the courts, and such) should
not be allowed to vote, hold public office, work for government
or hold a professional (government issued) license.

After all if someone loses his gun rights do you really want him
being a doctor of your children or your children's teachers? Or
your lawyer? Or handling sensitive government records about you?
Or voting?

: Just how many times are Florida Felons allowed to vote, anyway? Jesse
: Jackson seems to think that they should riot in the streets.....
: Jesse Jackson has not yet come to grips with the fact that he is a
: sad-sack loser.
:
: Bye, bye, Jesse. Take your 12 hired protestors with you.

Once again, the response is attacks on people, their backgrounds, or their states. You have made no progress what so ever justifying your position. I don't think I am alone in stating that I am tired of people that find fault in the good things in life, denigrating our heroes, and in general finding fault with everything that does not reek of perversion. May God have mercy on your soul.

Gore was a Senator who supported early efforts to establish the
computer network that ultimate became the Internet. Typical of his
penchant for "exageration", he seems to have grown that support into an
"invention".

And Arthur C. Clark didn't claikm to invent the geostationary
sattelite, although it seems to me that he could have had a valid claim
to that by patent, if he had chosen to file it. He was a perceptive
writer who understood what it would take to make a sattelite be
geostationary and he was the first to describe it in writing.

No special political agendas in play here, just the sincere feeling that trust cannot be rebuilt through incarceration time spent in the penal system. What's actually in question here is a person's character - something that is extremely difficult (if not impossible) to change, notwithstanding a lot of wishful thinking to the contrary.

But people do grow up. There is not a lot of crime committed by those over 35 as first or second offenses. If we are going to talk about justice and 'debts to society' it seems only reasonable that at some point, the debt should be marked 'paid'. The reality is that young people do dumb things and a good third of them are never seen or heard of again.

Just to define things a bit tighter, someone who drew a five-year term for say Dyer Act (interstate transportation of stolen cars) violations, served two and served out his three on parole would not be considered until at least his original term has run twice or ten years from the crime. This is a pretty standard case where a pro finds a non-sophisticated young nincompoop to take the big risk. You can probably find this guy at the local body shop. Probably no worse a risk than his co-workers. How long do you want to punish the guy?

This was, outside the South, a fairly common practice up to the 1930's.

Dick N&#65533;BK

That "paltry few" is approaching the billion mark (if it hasn't already passed it). And a billion people can make a hell of a mess. So, while I'm not willing to buy into all this environmental nonsense, I'm also not willing to dismiss it so lightly. Yes, some of it is nonsense, and some of it is exaggerated. But some of it is absolutely true. And that alone is worth paying attention to.

> Mt. Pinatuba blows and creates more
> pollution than mankind has since the
> beginning of their puny existence.

That phrase is as ignorant as anything I've heard from the environmental movement lately. It would take few dozen volcano eruptions to equal the amount of some chemicals we're putting into the air daily (peroyacetyl nitrate, ethane, ethylene, propane, butanes, pantanes, acetylene, lead, nitrogen oxides, carbon monoxide, sulfur dioxide, and so on). Lets not forget water pollution, sewage disposal, and garbage dumps. Yep, a billion people can make a hell of a mess.

> We who farm and work with the land know
> it is a partnership, we tend the land
> and the land provides food.

The average farmer today puts more chemicals on his crops each year then a farmer from the previous generation of farmers did in an entire lifetime.

> Remember the horrible Alaskan oil spill
> that would destroy Alaska for centuries?
> Try to find any trace of it today!

I just visited a number of Canadian, and Alaskan, beaches a little over a year ago, and oil is still washing up on some of those beaches. In fact, it was so bad on some beaches, my shoes were covered with oil at the end of the day (I threw the shoes away before returning home - I didn't oil on the other items in the suitcase). Yes, the oil is less visible today (you only see patches of it on the beach), but its still there (sitting on the sea bed, occasionally washing up on the beach).

> It further allowed the raping of an American
> oil company in the name of "mother earth".

> We have put up with increased prices because
> it was the feel good thing to do.

You would be amazed at how little Exxon actually paid for that oil spill (actual money paid, not marketing hype), especially when you compare it to the cost for taxpayers. Exxon was not raped. Instead, Exxon, with it's billions in profits, screwed the American taxpayers (who paid for most of the cleanup).

At one time, Damark used to offer some fairly interesting items at decent prices. However, in the last five years, or so, the quality of their merchandise has went down and their prices have went up. A few years ago, I simply decided that nothing they offered was worth the price charged (if you shop around, a new, non-refurbished item can almost always be purchased for nearly the same price).

Are the tankers unloading refined gasoline, or raw crude oil that has to be refined? Do you know the logistics of the refining process and the delivery network?

Southwestern Philly is one big refinery complex. Marcus Hook is a few miles downriver and has more refineries. Yet we had shortages too, because they have to supply more than the immediate neighborhood.

Just saw regular at $1.43/gallon. Lowest price in months in this area.

No, that's not the problem at all.

>They have been buying it from other states. OK to
>pollute somewhere else, but NIMBY so now they are running out of service.

Nope.

Unlike the East, much of the Far West is powered by large scale hydroelectric
plants. Most were built decades ago - with FEDERAL tax dollars. Hoover Dam,
Grand Coullee (sp?) Dam, many other smaller ones, all help power the West at
electric rates far below what most of us pay.

Trouble is, those dams depend on rain and snow to work.

California has nuke plants, fossil plants, even wind plants. They also have a
growing demand.

The recent shortage is being caused by unusually cold weather in areas where
electric heat and heat pumps are common. End result is very high electric
demand at an unusual time of year.

>Too bad, I hope the whole bunch set in the dark and contemplate their
>support of the tree-huggers.

What's YOUR solution, Fred? Burn more fossil fuel? More nuke plants?

How about a little less waste?

You apparently are void of a sense of humor and unable to recognize
puns and a play on words.
I wrote that Bad Blood's ROLLLLLLLL CALLLLLs went down the toilet or
as they say in Brooklyn, "terlet." Then, being the genius I am, wrote
that we Goodfellas won by pulling a royal FLUSH. Get it? Going down
the toilet and flush. See the association? If not, when God gave you a
brain, He shrink wrapped it. Now Wufu maybe you'll recognize and
appreciate the wit, wisdom, satire and facetiousness in my prose.

How will taking weapons away from law abiding citizens get them
out of the hands of criminals? Inquiring minds want to know.

Only law abiding citizens will turn in their guns. That leaves
law abiding citizens defenseless against armed criminals who
obviously will not turn in their guns.

The moral of that episode is that citizens who don't carry guns
are at the mercy of criminals who do.

Actually, it's another sad story of what gun control has done to this country. These nuts are assured that because their victims are unarmed that they can do what they do without fear. Funny that these types of crimes don't happen in areas of the country where it's still possible for the citizens to obtain a concealed weapons permit... in in the rare case where it is tried, the bad guy is usually dispatched in quick order- with minimal loss of innocent life.

History has shown us the type of leaders that would disarm their populace, and why. Those who do not learn from the past are doomed to repeat it.

Back when educating New Jersey was a Midwest cottage industry we would
take these hip guys whose idea of fun was doing some things we quit when
we got our driver's license out tipping over sleeping cows. We called it
the Joisy Snipe Hunt. Kind of sounds like Coontail spent a nite among the
meadow muffins.

Ever hear of Four corners? Except for the stuff in the Northwest, there is
not that much hydro out here.

As for the rates, the wholesale cost was on the order of $.05/KWh before
"deregulation" where the electric retailers were forced by California to
sell off their generating plants. It is now (as of yesterday morning)
$1.30/KWh.

In actuality, there are several problems out here, but lack of rain and
snow is not one of them.

Real problems: plants shut down for maintenance, plants shut down because they have exceeded their EPA allowed emmisions for the year, no new plants built in CA in decades for a LOT of reasons, increased population and use of electricity, a failed "deregualation" law which allows gouging by wholesalers, a physical distribution system that limits where electricity can come from.

Interestingly, LA gets its power from a local government owned, gas powered utility. They have no problem with supply and the rates have not shot up like the rest of the state.

BTW, the California Public Utilities Commision and Southern California Edison both agree on all of the above, so if you have some arguement, take it up with them.

A heavy iron skillet in the hands of a madman is equally effective.
And madmen, it should be noted, seldom pay any attention to laws,
including gun laws.

In the world that you would apparently prefer, madmen, criminals,
and agents of the government would be the only ones with firearms.
The ordinary, law-abiding citizens would be utterly defenseless.

With all good wishes,

--

I agree...a few years back some folks (3) decided to rob a local pizza
shop. They hearded all the customers, except one, into the freezer and
shut the door. The one they missed was hidden behind a display case,
carried a legal .45 auto, and with his previous experience (VN Vet),
dispatched two at the door, the other ran outside and collapsed from
his wound.

Cops came, said got a permit? Yep. Ok thanks again.

And YOU'D better breathlessly phone CNN and inform them that the lead
story on their web site is wrong.

But in the final analysis, what does it matter? A nut with a gun kills
innocent people again, and you people scream bloody murder (pun
intended) if someone threatens to take away your penis extensions.

You are showing just how pathetic you are by your very reactions. I
love it!! Carry on!

In other words, you don't care if somebody gets murdered, just so long as it doesn't happen with a gun?

To what extent are you willing to go to ensure this?

Warrantless searches?

Repeal of the fifth amendment?

The problem is actually more fundamental than that: Poor planning.
When you have the kind of growth you've seen in the last 5 years,
and it takes 4 years to seat a planning commission for a new power
plant, due to restrictive law benefitting the environmentalist, you
have power shortages when this kind of unusual circumstance arises.

Natural conditions like weather are not only unpredictable, but
they are predictably so. And unusually cold weather is something
that can be planned for, should be planned for when considering
generating capacity. Similarly with droughts. Droughts in the West
are and have been the stuff of legend over the last century, and to
assume that drought can't or won't coincide with cold weather is
foolhardy, if not negligent. And as far as population is
concerned...when was the last time that the population in California

went down.
The last power plant built in California was completed in 1992.
We've know since long before 1992 that the population was growing
and that droughts and cold weather were happening.

Poor planning. And restrictive laws that delay and interfere with
the construction of new generation facilities, as well as
restrictive laws that delay and interfere with the fuel supply are
to blame for what's happening in California.

The chickens have, in fact, come home to roost.

What's not so widely realized is that California is only a
harbinger to what's in store for the rest of the country.
Powerplants all over the midwest have been closing. Commonwealth
Edison, serving Illinois, no longer owns generating facilities, but
instead has elected to be a 'transmission' facility. Where's the
power going to come from? And with deregulation, what's going to
protect us from the profiteering that's currently being seen in some
states?

50% increase in gas prices in Illinois in the last 30 days. Why?
Shortages, because drilling has been slowed by environmentalists in
policy making positions in Washington.
Gas prices are at or near all time highs. Why? Supply problems,
due to newly tightened EPA restrictions requiring reformulated fuels
in the midwest which absorb resources from refining capacities which
are nearly at their limit already. There hasn't been a new refinery
built in this country in 10 years. And it will be at least 10 years
before the first drop of fuel flows from a new plant if one were to
be started this afternoon.

Population growth has been documented and predicted for decades.
Demand increases have been charted for decades. Cold weather isn't
unusual in this area.

It's just poor planning, and restrictive laws that interfere with
the supply of fuel.

Domestic drilling is declining, due to recently tightened
environmental restrictions. Domestic capacity is the lowest it's
been since the 70's, and we're now more dependent not only on
foreign oil, but we're buying foreign refined product as well.

Demand for refined product has been charted and predicted for
decades. Public transportation systems are have been cutting
services since the 80's. Cars are more efficient now than they have
ever been and population growth has been charted and predicted for
decades.

Poor planning. And a Head-in-the-Sand attitude by environmental
concerns who have routinely distorted the impact of fuel production
in this country.

There are huge oil deposits in Alaska that we are not allowed to access because of PDD's taking the land off limits. Gore, during the campaign, addressed this issue claiming it would be criminal to despoil the vast and great Alaskan landscape by turning it over to Big Oil. This is gross misinformation if not an outright lie. Oil drilling confined to an area no larger than 6000 acres would release this yeild. That's 6000 acres out of the 586,400 square miles of Alaska. A postage stamp on your living room floor would be huge by comparison. And the oil industry admits that 6000 acres would be more than adequate. MUCH more than adequate.

Poor planning and the exploitation of ignorance. That's all it is. And the eagerness to believe the lie, has led us to a position of dependence, and in some cases, some areas of the country, desperation, when we are more than capable of fending for ourselves, with domestic production of fuel and electrical generation.

It's not the cold weather. We can plan for that. It's not the population, we can plan for that. It's not the drought, we can plan for that. It's not the sudden and unusual combination of these factors, because they're neither sudden nor unusual. And we can plan for that too.

The problem is, we didn't. And what's worse...we aren't still.

Get real.

You can't beat someone with a skillet you don't have either.
I propose we stop this tragedy before it happens by issuing a licence
needed to buy a skillet.

Thus ignoring the fact that Mass. has some of the most restrictive firearms laws in the country. And the fact that ALL the firearms used were illegal. But let's pass more laws that we won't bother to enforce, that will help.

Why not be honest, you just don't want people to own firearms, for any reason. Just why you are so afraid of an armed populace is another question. Maybe they might object to some of your other ideas for reforming society? Or maybe you just feel that the general populace is not qualified to think for themselves?

Regardless of your reasons, your ideas qualify you as someone who I personally wouldn't trust with any position of responsibility.

AND, Mr. Anon, I'd like to know how more "laws" will prevent slaughter of innocents? How will and when will the criminally minded person voluntarily surrender HIS weapon? How will banning private ownership of guns stop killing? How will removing guns from the hands of law-abiding citizens reduce or stop murder? I want an answer IF you can answer!

It is a funny thing how my Dad's Harrington & Richardson shot gun has stood in the corner since 1953. Except when he took it out to show his son (me) how to care for it, how to carry it, clean it and store it so as to be completely safe--when I was 9 years old! No, he didn't let me shoot it--he wanted to explain that it was NOT a toy and to take away any "mystery" it might hold for a little boy. It stood there again until he was deputized once and went with the sheriff's posse to hunt for an escapee. When I was a teenager, it shot a few cans and skeet, a rabbit or two. Has stood in MY closet for 8 years now. Funny. It's never hurt anyone, never been fired in anger. Just like the guns of millions of honest Americans that sit idle, quietly, harmlessly. Unloaded. Again, how will taking MY shot gun, YOUR Beretta, Ole Joe's 44 Magnum, and all those guns that stand in their respective corners stop the person who is a criminal to START with? Tell me, HOW?

The truth is, it WON'T! It would be just another in a series of liberal el pinko. crap-dripping, rose-colored-glasses, leftist, feel-good, but ineffective sh**. And just remember one thing: Gun "control" or NO, I hear a suspicious noise, and one of Mr Anon's "friends" sticks his head in my window in the wee hours because the law "took" my gun away, I-WILL-BLOW-THE-SCUM-BASTARD'S-HEAD-OFF-AT-POINT-BLANK-RANGE, and, if he is not already inside my house, I'll pull him the rest of the way in where the law will find him when they get here. And YOU, Mr. Anon, can mourn for the "poor, oppressed, widdle 'cwiminal' who would've shot me or my family had I not had a way to stop him.

So, tell me how gun control will stop crime? How will it keep guns out of the hands of the burglars, bank robbbers, and thieves? I would like to be "enlightened".

Unlike you, I am

The weapon of choice in England appears to be the beer mug. All the rants to the contrary, had Mass had a must issue concealed carry law, do you think this would have happened? Here in Georgia, we have such a law and most of the homicides occur in the inner city between members of the drug and prostitution culture. The lowest crime AND homicide rate per capita in Georgia is a city north of Atlanta that requires BY LAW that each household MUST have a firearm in the house. The law was passed at the same time Morton Grove, IL. banned all weapons in the town limits. The roving gangs from the inner city give Kennesaw a wide berth.

Gun control is nothing more than liberal speak for BLACK control. One need only watch the news each night to see what group the perpetrators belong to, Liberals could never bring themselves to admit that uneducated Black gang members are the culprits. Ergo if we pass a ton of gun laws, we can disarm the Blacks without appearing racist. We watched the government do the same thing with linear amplifiers, "let's take amps away from lawful Amateurs and then the CBers won't be able to get them". That worked at least as well as gun control will. Control criminals, not guns!

That's nice. Here's a point for you to ponder: one of the largest
massacres in US history (the Happyland disco murder) was committed by a
madman with a few gallons of gasoline and a match.

Stupid is as stupid does, I guess.

Your statement is rather ironic when viewed from the context of the
disarmed victims shot in this case.

Dr. Mike

If you are alluding to the part where you implied that anyone who feels his race is superior is a racist, then indeed I am a racist.

Compare the percentage of my people that delight in profanity on the newsgroups, selling drugs to children, gang banging, drive by shootings, running prostitution, and need I go on?

Of course by that definition I am a racist. I live in a country that is 80% white and each night I watch the news and see 80% of the crimes committed by Blacks. Of course we are superior! Our moral values are higher, our concern for our fellow man greater, and our respect for life extremely profound. That is what makes us better. You on the otherhand have to resort to the cottenfield mentality of profanity because you are not educated enough to find phrases that will allow you to express yourself. You Sir! are in every way the embodiment of the term NIGGER! You may wear it as proudly as I wear the terms Bigot and Racist applied to me by the likes of yourself.

tragic event regards the victims and families, but one serious error occured: The shooter was taken alive!
Now-another OJ, Blue Dress BJ, and herniated chad "news" story will develope and will fill the airways with motor mouth tripe, and a movie will be forthwit, and hence, on the way.

By the by, the few reports I viewed indicate most victims were dispatched with the shotgun. The kalishnaya is fine for assault, but the shotgun much better in close.

Live in misery with your slant.

While the shuttle might reach the same altitude as the AO-40 perigee,
the problem is that due to the large eccentricity, at perigee the
AO-40 will have a speed several km/s larger than the shuttle, so there
is absolutely no way the shuttle could catch it.

A couple of "nits" to pick here -- For one thing, serious mental illness
is NOT a generally curable disease - there are plenty of examples of
this so it would be too pedantic for me to list them here. If this were
true, then mental illness would not exist as a societal problem. I
would also like to see your source concerning the 9% mis-adjudication
rate that you quote here. If that were true, it would be an outrage and
should be made into a major socio-political issue. On the other topic -
DA's get paid the same regardless whether they "win" or "lose". These
terms are not really appropriate here anyway, since there is no gain for
the DA or for society if the wrong person is convicted of a crime, so
there's no reason for "DNA to be a DA's worst nightmare!". This would
seem to imply that they just want to put a warm body in prison for each
crime, rather than the guilty party. That's ridiculous!

In Arizona it is legal to carry an unconcealed weapon, no permit required. Get the permit and you can carry it concealed. Yet 99+ percent of the population do not carry any guns in their everyday activities. Most people here apparently already feel that carrying a gun is not a solution for them...

Yep. It's where four states meet at a single point - the only place in
the Union where that happens. Arizona, New Mexico, Colorado and Utah,
as I recall.

> Except for the stuff in the Northwest, there is
> not that much hydro out here.

There's Hoover and several other hydro dams on the Colorado. All built
by Federal dollars.

Holy cow! It's cheaper to run a generator fueled with $1.75 gasoline
than to pay those prices.
>
> In actuality, there are several problems out here, but lack of rain
and
> snow is not one of them.

Thanks for the info, Jim. My mistake - I oversimplified the problem.
However, note that the time of peak river flow is not midwinter.
>
> Real problems: plants shut down for maintenance,

Yup - we have that here, too. Winter is usually a lower-demand time
than summer. Not caused by environmentalists

> plants shut down because
> they have exceeded their EPA allowed emmisions for the year,

Environmental cause #1. They can restart January 1, I presume.

> no new plants
> built in CA in decades for a LOT of reasons,

Some of those reasons are environmental, of course. (Like not wanting
to build plants on active fault lines). But I'll bet many of those

reasons are NOT environmental:

- High cost of land
- Hard to compete with cheap hydro power
- Uncertain deregulated future
- NIMBY attitude on "esthetics" ("We don't want to look at it, even if it is clean and safe")
- Short term, high payback mindset

> increased population and
> use of electricity,

Not environmental, either. In fact, they are anti-environmental. See below about LA's utility.

>a failed "deregualation" law which allows gouging
> by wholesalers,

Not environmental. Oddly enough, a problem of TOO LITTLE government regulation.

> a physical distribution system that limits where
> electricity can come from.

Partly environmental, but also partly NIMBY/esthetic and partly high cost of land.
>
> Interestingly, LA gets its power from a local government owned, gas powered
> utility. They have no problem with supply and the rates have not shot up
> like the rest of the state.

Sure - they are more regulated!

But think what they are doing. Natural gas flows through a pipeline and is burned make heat to turn a turbine that turns a generator to make the juice that flows through the wires to get to your house. Much of that juice is used for heat - home heat, domestic hot water, cooking. It would be much more efficient and clean to burn the gas at point of use rather than in a generating station. But gas appliances are often more costly to buy and install than electric ones. So low first cost wins out over long term efficiency.
>
> BTW, the California Public Utilities Commision and Southern California Edison
> both agree on all of the above, so if you have some arguement, take it up
> with them.

My only argument was Fred's claim that it was all due to the "tree huggers". Obviously that's not true - it's a complex problem caused by a bunch of things, only some of which are environmentally related. My

oversimplified explanation was partly in error, too.

Thanks for the info, Jim.

Very strange... yes, he wasn't a 'convicted' criminal.

But this 'ordinary citizen' as you deemed him apparently
had bombmaking equipment in his apartment, including,
but not limited to, blasting caps and apparatus to manufacture
nitroglycerine, according to the latest news reports.

And by the way, while Mass doesn't have a 'must issue'
concealed law, (they currently have 4 steps) most of the
'away from Boston or Worcester' towns issue protection
permits as a matter of course. Boston it tough to get
ANYTHING, but I've never been hassled there, except
when my sweater hunched up and exposed my 36. I
got dressed down by a cop to being 'indiscrete', but was
never asked for my permit. In fact, in 23 years, I've
NEVER had to show my permit for ANYTHING except
for 'purchase' or 'application' type things.

Mass is weird though. We can own class III firearms, but
we can't own a silencer...

The problem really comes down to the first issue, do
people have the right to bear arms. Well, it wasn't
'granted' by the Bill of Rights, it was affirmed that they
do. Now does the government have the right to restrict
certain arms, and for what reason. A lot of people
can come up with all kinds of "but that..." kind of
scenario, but no one has been able to draw that line
in the sand short of weapons of mass destruction
or weapons with indiscriminate fire. And even there
problems develop with the definition.

Remember, the Bill of Rights wasn't written to assure
the people they could keep their hunting and sporting
firearms. The first 'ordered' shots of the revolution
were very specific. They were shots fired to defend
the cache of MILITARY arms at Barrets Mill when the
colonials made the stand at the Old North Bridge.

So the gun grabbers can whine and try to rewrite the
intent all they want, and maybe one day they might
succeed, but just remember, the ORIGINAL intent
was that everyone be CAPABLE of being armed, not
that they were required to be, just in case they felt
they wanted to overthrow a government again.

Far fetched? Just keep in mind that that had just
overthrown what was almost universally perceived
as the most powerful single government in history.

I guess you are not familiar with the laws, I own several machine guns, and horrors of horrors even weapons with "silencers" on them. All that is necessary is a background check and the transmittal of the necessary 'TAX STAMP" funds to the treasury department and you too can own a Thompson Sub Machine Gun. Now that is an assault weapon, not the semi-automatic rifles that look like assault weapons that you and the media get your panties in a wad over.

By the way the person killing those 7 people was in violation of the law, he was under the care of a shrink, and his shrink failed to ask him if he had weapons. If you look at the accounts, the major amount of damage was done with a shotgun, not the dreaded "assault weapon".

To answer your question as to why anyone needs an assault weapon, the answer is simple. The constitution gives us the right to keep and bear arms against an oppressive government, not for hunting as many on the left try to assert. People are killed by the hundreds everyday by automobiles, where is the hue and cry to rid the country of cars? What about the real killer of children, swimming pools? How about assault airliners that wipe out hundreds at a time? Nope, the real agenda is to disarm the American people as the Nazi's did in 1939, when Adolph said that it was now the safest country on earth. For who? Not for the Jews, the Gypsies, the Catholics, the homosexuals, and the mentally challenged. It is NOT gun control, it is criminal control that is necessary!

Agreed. Please see my post to Jim Pennino as well.

Poor planning is another way of saying "short term focus" which is
epidemic in the USA and elsewhere.

> When you have the kind of growth you've seen in the last 5 years,
> and it takes 4 years to seat a planning commission for a new power
> plant, due to restrictive law benefitting the environmentalist, you
> have power shortages when this kind of unusual circumstance arises.

Environmental considerations are a factor, sure. There's also local
politics, the high cost of land, folks who don't want a power plant no
matter how clean and safe it is (even if it replaces a dirtier, less
efficient old plant), etc., etc.
>
> Natural conditions like weather are not only unpredictable, but
> they are predictably so. And unusually cold weather is something
> that can be planned for, should be planned for when considering
> generating capacity.

Sure. But what level do you plan for? Something that happens every
year? Sure. Every 5 years? Every 10 years? Every 25 years? At some
point, the bean counters say "Not worth the investment".

That's one of the reasons utilities were so heavily regulated - to
force them to think long-term and also to do things that "the market"
wouldn't bear - like plan for the worst case.

> Similarly with droughts. Droughts in the West
> are and have been the stuff of legend over the last century, and to
> assume that drought can't or won't coincide with cold weather is
> foolhardy, if not negligent.

Depends on who is doing the planning and setting the standards. Getting
rid of excess capacity that isn't being used is what "downsizing" is
all about.

> And as far as population is
> concerned...when was the last time that the population in California
> went down.

Agree 100%.

> The last power plant built in California was completed in 1992.
> We've know since long before 1992 that the population was growing
> and that droughts and cold weather were happening.

Sure. I don't think drought is causing this shortage, though. (See post
by Jim Pennino in this thread). Main problem is lack of available
capacity at an unexpected time - in other words, poor planning.
>

> Poor planning. And restrictive laws that delay and interfere with
> the construction of new generation facilities, as well as
> restrictive laws that delay and interfere with the fuel supply are
> to blame for what's happening in California.

Are all those laws environmental laws? No - but Fred blamed the "tree huggers" alone. Simply not true.
>
> The chickens have, in fact, come home to roost.

Sure - for a variety of causes.
>
> What's not so widely realized is that California is only a
> harbinger to what's in store for the rest of the country.

Maybe. Here in the East, electric demand has not kept pace with projections.

> Powerplants all over the midwest have been closing.

The question is: WHY? I doubt it's solely because of environmental regulations.

One problem of deregulation is that old plants which cost a lot to run but are reliable and capable of meeting short term demands get shut down. Then when the capacity is needed, it's not there.

> Commonwealth
> Edison, serving Illinois, no longer owns generating facilities, but
> instead has elected to be a 'transmission' facility.

Again - is that due to environmental laws alone? Or are there other factors too?

> Where's the
> power going to come from?

The energy has got to come from somewhere - and that's the real rub. Too many folks in our society don't "connect" the fact that their modern technology (electricity, cars, cell phones, etc.) requires a vast infrastructure (power plants/lines, oil wells/refineries, cell sites/antennas). Dumb.

> And with deregulation, what's going to
> protect us from the profiteering that's currently being seen in some
> states?

Nothing. "The free market" is not the best solution for everything.
>
> 50% increase in gas prices in Illinois in the last 30 days. Why?
> Shortages, because drilling has been slowed by environmentalists in
> policy making positions in Washington.

Not just that. Also deregulation.

> Gas prices are at or near all time highs. Why? Supply problems,
> due to newly tightened EPA restrictions requiring reformulated fuels
> in the midwest which absorb resources from refining capacities which
> are nearly at their limit already.

Hold on a minute, there.

Gasoline prices are down here in PA - from $1.75 this summer to $1.45
and lower. And when ADJUSTED FOR INFLATION, they are LOWER than at any
time since the end of WW2.

What did you pay for gasoline 5, 10, 15, 20, 25 years ago - adjusted
for inflation? It was more back then, not less.

> There hasn't been a new refinery
> built in this country in 10 years. And it will be at least 10 years
> before the first drop of fuel flows from a new plant if one were to
> be started this afternoon.

Agreed. Partly due to environmental concerns - but also a lot of NIMBY
stuff that has nothing to do with environmental concerns. Plus the old
short term focus. Try to get funding for a 10 year project...
>
> Population growth has been documented and predicted for decades.
> Demand increases have been charted for decades. Cold weather isn't
> unusual in this area.

It's the timing and duration.
>
> It's just poor planning, and restrictive laws that interfere with
> the supply of fuel.

Should there be no environmental laws? How about we go back to leaded
gasoline? Great stuff, if you don't mind the health effects.
>
> Domestic drilling is declining, due to recently tightened
> environmental restrictions. Domestic capacity is the lowest it's
> been since the 70's, and we're now more dependent not only on
> foreign oil, but we're buying foreign refined product as well.

Not just because of environmental concerns. It's cheaper in most cases
to import it than to extract it here.
>
> Demand for refined product has been charted and predicted for
> decades. Public transportation systems are have been cutting
> services since the 80's.

Again - WHY? Because of poor planning and short-term focus. Transit is
much more efficient, clean and cost effective than private autos in
many areas - but it takes a long term focus.

> Cars are more efficient now than they have
> ever been

But there are more of them, and people are driving them more. And the
big ones outsell the little ones. How many SUVs are used for commuting
a single person, and are basically status symbols?

> and population growth has been charted and predicted for
> decades.
>
> Poor planning. And a Head-in-the-Sand attitude by environmental
> concerns who have routinely distorted the impact of fuel production
> in this country.

Head in the sand by everybody. Count the SUVs that have one person in
them. Count the big houses with only a few people in them. Note the
long commutes in gas guzzlers. See the big investments in highways
while the railroads and transit systems struggle in an unfair
competitive situation, penalized by their efficiency.

Don't forget a tax structure that rewards the wrong things, too.
>
> There are huge oil deposits in Alaska that we are not allowed to

How do you know it's a lie? I don't. Exxon told us the Valdez was a
safe, modern ship and its captain was qualified.

> Oil drilling confined to an area no larger than 6000 acres would
> release this yeild. That's 6000 acres out of the 586,400 square
> miles of Alaska. A postage stamp on your living room floor would be

How will they get it out of that 6000 acre area? Without another Exxon
Valdez mess?
>
> Poor planning and the exploitation of ignorance. That's all it

> with domestic production of fuel and electrical generation.

Perhaps. Maybe the idea is to burn up everybody else's oil, and save
our own for last.
>
> It's not the cold weather. We can plan for that. It's not the

Agreed. Short-term focus. Ignorance of the price of modern technology.
Inefficiency and waste because energy is kept artificially cheap.
>
> Get real.

Tell it to Fred.

You're quite welcome.

I think it very telling how Americans will pick and choose what
they consider an unacceptable risk to safety and limb vs preservation
of freedom.

Both the auto and the firearm are capable of preserving freedoms,
yet one is allowed to kill over 38,000 Americans EVERY year. Has done
so since the VietNam war, peaking one year around 68,000.

In most cases the weapon is either unlicensed or unregistered,
operated by a poorly trained user.

It's available in every state of the Union, sometimes without any
adult supervision. It is often abused by adult and teenager alike
while under the influence of alcohol or other mind-altering substances,
and has been known to be gotten ahold of by children as young as four.

In it's sportier and higher powered versions, it is often sold
without regard of the operators ability or experience.

However, used and cared for properly, it is no more likely to be
dangerous or cause a death than a hand gun.

Surprised...?!?! You ought to be. It's your car. Care to give
THAT up, Anonymous Coward?

> --------== Posted Anonymously via Newsfeeds.Com ==-------
> Featuring the worlds only Anonymous Usenet Server
> -----------== http://www.newsfeeds.com ==----------

The "Usenet Server" for the Stupid, Balless, and Cowardly, run by
stupid, balless and cowardly people.

Get a life, Coward. Handguns, automatic weapons, shotguns, etc are
NOT the problem. The liberal ass, kissey/feely/give-em-a-hug bastards
of the Algore Party are the ones who perpetuate the problem. By
keeping a disproportionate part of America ignorant, dependent on them
for food and shelter, and strung out on drugs (ANOTHER enforcement
issue...go figure...), they help manifest this TRAGEDY!

"Rehabilitation" is NOT the answer when PUNISHMENT is the question.

Or the average range that beatings occur...

Or the average range that lynchings occur...

Still want that nutcase with the frying pan, Doc?

Violence is an "up-close-and-personal" kinda thing. Yes, a bullet
can do the things you mention, and there are the occasional TRULY
accidental shootings, but they are GROSSLY overshadowed by PED-vs-auto
trauma EVERY YEAR. Are you going to demand prohibiting cars?

Adios, and DUCK!

Steve Robeson, LPN

And furthermore, you can bet your jewels that this guys liberal shrink has a concealed carry permit for his/her penis extension. See if you can get CNN to report on why all the elitist attorneys, judges, and psychiatrists have a need for concealed carry but the rest of us are suspect.

More guns, less crime.

And the Amateur radio community wonders why we can't get more people involved in the hobby. Between the NG's and on air exchanges we are sending the younger generation who will keep the hobby alive all the wrong messages. I just can't believe where we are going. Once the old timers who actually know radio pass on all we'll have left is a group of CB appliance operators that could read enough to memorize the test. I know most Hams out there are very nice and knowledgable in radio, WAKE UP, and take back control of our hobby. It's time to do whatever you can to clean out the handful of problem operators. There is serious power in numbers, let the ARRL and authorities know it, email, write, call, any way you can. There are many talented youngers that will love this hobby and thank you for the effort.

Dr John, if the iron skill is well seasoned, its a fairly easy clean up job, but a Teflon coated skillet makes cleaning up the blood and hair a snap. On the down side, the teflon skillet probably couldn't be used as a skillet anymore.

What you say is true.. but quite frankly listen to the ham bands.. is
every conversation about modifying a new HT or who just got busted by
the FCC? Of course not.. this board is for hams to chat, period..but
your point about taking special discussions to other dedicated boards is
still quite logical and well founded!

No, no, no! No licenses. Implement an instant check system where purchases are denied to criminals and crazy people. Then the rest of us can do battle with skillets all we want.

I wonder if this guys shrink has a concealed carry permit! Why is it that they can carry guns because they know they are treating crazy, dangerous people, but the rest of us have to tough it out?

Can't a psychiatrist be held liable if one of his/her nut cases does harm?

Fred, ole boy.. each of the things you mention are subjective, loaded with personal values, inabilities to see beyond specific obstacles in thinking and so on. Your religion is no more right than mine or perhaps anybody elses. But, to you its important.
Your politics are important to you, but may disagree with someone else.
And finally Fred, if you want to be taken as more than a red neck from Missouri, then stop issuing perversion signs to everyone and everything you disagree with.
Its as simple as that. Understand?

The only scandal that proved to be anything more than smoke, blown up by the "Repugancans", was Clinton's stupid sexual misconduct with Lewinsky. Now, I agree that was wrong, but it didn't affect his job, unless we were paying him while he was tickling her (.....) with a cigar.

The rest of these alleged scandals were staged by anti-Clinton forces to assure the next guy in the White House would be a "Repugnacan".

One of the minor joys of living in Nebraska is that there are no private power companies thanks to Senator Norris many years ago. So we sit between two well-designed built-to-cost nukes, a coal plant with six-turbines to handle downtime and raise a few centavos selling power, and adequate peaking capacity at rates that would cause a major drooling fit in most parts of the US.

When I enjoy the benefits of public power and contemplate the fact that LA of all of la-la land is the only place the lites won't go out soon it becomes pretty apparent that no matter how deeply one believes in free enterprise, electric service is not the place to be free and enterprising.

Almost makes one contemplate (heaven forbid) Socialism.

Why do you assume they're not carrying a concealed weapon? A
concealed weapon is somewhat harder to count.

Do you think your 99% unarmed rate would change if there were civil
unrest, a crime wave, or an unbearable government cam in to power?

Funny how these things always happen where the guns used are outlawed or
subject to "waiting periods" and licensing.

Tell ya what -- you just wave that HCI pamphlet and your Rosie doll when
your turn comes.

Have to agree with Steve,
We don't need more laws for guns, we need to enforce the ones we currently have. this lets not offend attitude that our previous administration has promoted is coming to an end. a new sheriff is in town and he swings a big f$@&ing stick. check out the death row in texas getting rid of the trash quicker than ham gear on ebay.
I am sorry for the folks killed this week however guns in the right hands have protected this great nation here on our soil and abroad. And they will continue to do so no matter what all the bleeding heart tree hugging, young democrats have to say.
Just my thoughts.
Donnie

This is so irritating ! The damn conservative idiots still think that "guns actually kill people" - NO, stupid, lowlife, mentally unstable and criminally inclined people USE guns or Assault Rifles to Kill other people. I carry an automatic everywhere I go due in part to my job. It is a real shame that these mentally challenged morons do not inhabit my area. Their willful, deliberate killings would come to an abrubt end.

Lastly, why do you bother posting this crap on an amateur newsgroup? Go somewhere else to clog up the bandwidth with your rants and idiocracies. Keep it off my damn screen. If your so inclined to whine endlessly about gun control...turn in an weapon you may possess, run for local office, win and hope you don't tick off one of those guns who kill people.

Or, just as likely, they don't mention it when an anonymous voice on the phone calls to ask if they own or carry guns.

When I lived in rural AZ, I found that about 1/3 of the folks carried a social pistol.

You are correct of course. I don't know where you have been. But all
you suggest has been done, and still is. Even with the advent of Riley
on the scene the no callsign jammers are still going strong.

Because of the actions of people like the originator of this post. And
the people he supported ham radio may have been dealt a fatal blow. I
won't go into details here. But should you want the history feel free
to drop me a e-mail.

Riley has managed to break up the BARF and the STUMPJUMPERS. But their
brand of mis-conduct is still going on. Nowhere near as bad. But it
is just below the surface, waiting to fester again.

This subject has been discussed in detail. Hopefully it is over. But
I doubt it.

You think that idiot expected amy one of his intended victims to resist? There in the Grate Socialistic State Of Mass? Hardly. He knew he could have his way, do whatever his twisted mind desired. I don't believe there is any death penalty in Mass now, so then he didn't have that to concern him as a deterrant.
More liberal idiocy at work. You don't see loonies get away with that sort of crap where there is a right to carry, whether or not that many people actually do carry concealed. Mostly they know better than to even begin to think about it. The knowledge that any potential victim might just offer a really nasty surprise is usually deterrant enough. That scumbag probably thought he'd just -at random- make some people pay for the idiocy of their state government. He just felt dissed, and he took it out on someone.
They should hang him upside down by his wanger and just let him swing.

And when you answer that, then answer this: In an open country such as this, where the government can't stop the smuggling of tons and tons of illegal drugs of every description, how do you expect they will handle the smuggling of tons and tons of firearms to serve the blackmarket that will instantly develop?

Clue: You've seen the railroad shipping containers that every freight train hauls, by the thousands. I once asked an individual I know who works for US Customs how many of those coming into the country get opened for inspection.
His response: One in ten thousand. And he was an inspector at a west coast port of entry.

If you're really stupid enough to classify that freak as an "ordinary
citizen" you deserve whatever comes your way.

> It is about the serious question of just what an ordinary civilian
> should be doing with an assault rifle in the first place?

Maybe you should learn enough about weapons to understand what an
assault rifle actually is, rather than spewing liberal communist
garbage.

Ordinary
> citizens can't legally own working machine guns or live hand grenades,
> and no one claims that their constitutional rights are being violated.
Yet if someone worries that an assault rifle might be classified right
> in there with a bazooka or a grenade, certain people feel compelled to
> an emotional, knee-jerk reaction that their imagined "rights" are being
> abrogated.

"assault rifle" as denoted by all the gun control nuts and the State of
California is not an assault rifle in any sense of the word. An assault
rifle is a machine gun, one that will fire fully automatic. NONE of the
alleged "assault rifles" banned by the Grate State of the Left Coast is
in any way a real one. It was just that they had to change the name to
protect their ban.
Make it look like something it is not. Anyone who has possession of an
actual assault rifle has possession of a machine gun.
Beware, Idiots at work.

And, that is as it should be. But the fact that it is legal for a citizen who finds a need, to obtain a permit to carry is enough to drastically reduce the crime in that no crook can ever be sure that his victim du jour won't just be the source of his own sudden demise. It DOES give them considerable pause. It is a researched and proven fact.

Same here. However, they can't keep guns out of the hands of PRISON
INMATES, so I guess there won't be too many gun laws which will help.

That same evening news claimed that an AK will kill from a mile away.
They were equally wrong.

The fact is that no New Hampshire gun shop will sell a firearm to a
Massachussetts subject which they are not permitted to posess in their
home state. To do such is a FEDERAL FELONY.

> Individual state laws don't mean squat as long as you can drive 10 or 20 miles

> have (yet).

Oh, really? On MY planet, we had the "Gun Control Act of 1968," which
outlawed most interstate gun sales, AND required the gunshop to copy own
ID info.

But, again, it's funny that the states with "lax gun laws" aren't the
states where these things are happening . . .

This is a joke. "No gun control?" MA has some of the toughest gun control laws in the country. Look what it got them.

The laws, of course, did not prevent the perpetrator from committing murder. They did make sure that the victims would be unable to protect themselves.

Well, you can buy that stuff in any 7-11 in Massachussetts. For that matter, dor-to-door salesmen hang samples of the stuff on doors there.

After all, if bomb-making stuff were against the law, nobody could get it, right?

EVERYONE is *automatically* safer in states which have concealed weapons permits. It is simply automatic, and you don't need to carry a weapon yourself to garner the benefits of that added safety. The crooks can't know who NOT to mess with.

Can you imagine living with or working with Prof. Curt? Worse, what would it be like to be one of his children?

Forgiveness? Forget it! And since Character cannot be changed, he always will be like this! (grin)

QRM

There was a lot of excitement in the soap opera "Guiding Light" when a character in her late 40's became pregnant. It was called the "miracle pregnancy".

Then, a long-time viewer wrote in to say that the writers apparently forgot that this character had her reproductive organs removed about fifteen years before. Apparently, it was more of a miracle than anyone realized.

The guns the killer used were illegal. He didn't honor the existing laws.
Would you please explain how having more laws is going to change things?
If he didn't obey existing laws, why would he obey new laws?

Why do you want to disarm the innocent law-abiding citizens and leave
them at the mercy of the armed criminals? Only criminals would profit
from that.

The only way to counter an armed criminal is with equal or superior
firepower. A criminal with an AK47 is pretty much equalized by an SKS
or AR15. 12ga shootguns are pretty effective against criminals at
close range.

You attitude is understandable if you are a criminal. If you are not
a criminal, how do you protect yourself from armed criminals?

Again untrue, it is treated in the same way an automatic weapon is treated.
They are however referred to as "Suppressors"

In fact a fully automatic weapon with a suppressor is treated for taxes
purposes as a single taxable weapon.

I have no clue where people get the idea citizens can't own automatic
weapons. Is it easy? No, but totally legal with a background check and the
tax stamp. Check the BATF web site.

To all you folks out there who are crying More Gun Control.
Think about this.....
Our Military is spread as thin as it could be i.e. Balkans, Haiti,
Somolia, The worlds guarddog.
we had an administration that has done it's best to strip guns from
law abiding John Q. Public.

Wonder how our gun do gooders would feel if China decided to start
dropping paratroopers into every major city in the U.S. and our
goverment has stripped guns from every law abiding citizen in the land
Do you folks honestly think our own military could be rushed back
here to defend us, I Think NOT!
Wake Up America! Protect your right to bear arms,
and for you do gooders I for one won't feel sorry for you when
someone from a foriegn country pops you a new asshole in the middle of
your forehead should this country of ours ever be invaded because you
cried for more gun control, Something to think about...

How do you know those 99+ percent are not carrying concealed?
At least half the people in my group at Intel had guns in their
cars in the parking lot even though it was against company policy.
My boss at Intel packed a 10mm Desert Eagle. Dr. Williamson prefers
black powder cap and ball.

Shows what you and the dumbassed communist news media know. It *is* a
violation of Federal law for any gun dealer to sell a weapon to a
non-resident. It is also a Federal violation for ANYONE to ship any
firearm to anyone in another state except to a Federally licensed
firarms dealer. Both are felonies punishsable by jail time. Any retail
gun sale requires full ID and the usual massive Federal form fillout
with signatures, etc.
There was literally no stone left unturned by the Federal Firearms laws
passed in the years following the assination of Kennedy, since Oswald
bought the Carcano carbine that he **Allegedly** used to shoot Kennedy
by mail order. I say allegedly because there is simply no way that
Oswald nor anyone else could have used that rifle to do what was done in
Dealy Plaza that afternoon. The Italian Carcano carbine is the among
very worst pieces of crap ever passed off as a firearm. The one I had
many years ago -I got it by mail order, too- was so ridicuously sorry
that eventually I threw it in the trash. It wasn't even sellable. When
it would fire at all-you had to be certain that the bolt was completly
down on the receiver, a hundredth inch up would stymie it- it wouldn't
hold a pattern of any kind and the bullets mostly hit the target
sideways-when they hit it at all, and I'm a pretty darn good shot. And
it was a NEW rifle.
Whoever set up the plan that killed Kennedy used Oswald and that
Carcano carbine as the patsy without knowing nearly enough about the
gun, or they'd have chosen something else. Since that gun was easily and
cheaply available to Oswald by his own mail order, it was a logical
option. Why the Warren Commission and the government has hidden all they
know about it for these years we probably will never know. I think they
didn't dare tell the truth about what really happened for fear of the

repercussions that the public would have demanded. I believe the truth was known. It just wasn't told.
When you consider all the witnesses and evidence the Warren commisison ignored it becomes very easy to believe they didn't really want to get to the heart of it.

Of course, the handgun could only be purchased in his state of residence. The long guns could be purchased in another state, if the laws of both states are followed. Because no other state can figure out the Mass gun laws, it's just about impossible to purchase a long gun out-of-state if your a Mass resident. Really.

He needed a Mass concealed weapons permit just to keep these guns in his home, never mind buy them or carry them. He didn't have a permit. Under the law, his guns were subject to confiscation, and yes, Mass has gun registration so they know who has what, where.

Sorry, you're blowing smoke.

On the contrary, he was a criminal. He made himself a criminal by
violating the Mass. gun laws. That's what all criminals do - violate
laws. Gun control laws only take the guns away from the good guys.
The bad guys don't care about laws.

Yada,yada,yada. Abbra Kadabra! A magic federal legislation is going to
make guns just go "POOF"! How blind. "Doc", IF I want to (and I don't)
I can go 15 minutes away from my home, and buy ANY kind of gun I have
the cash for. It's called "underground", black market, etc. There are
so many unregistered firearms in the USA already it's mind boggling.
Most any ordinary citizen knows somebody, who knows somebody, who....
Ya get the picture? If I wanted a handgun, for example, or even one
of those dreaded AK47s, I CAN get it. I don't WANT it, but I COULD.
Law, federal legislation, not withstanding. That's why federal legis-
lation WON'T change a damned thing. The only thing TO do is, instead of
coddling people who commit heinous crimes, HANG them, FRY them, or SHOOT
them.

Here ya go, Docktor John... have a go at "police protection....

THE LAW: THE POLICE ARE NOT THERE FOR YOU

State and city governments -- rather than the Federal authorities --
are responsible for local law enforcement. So, only occasionally have
Federal Courts ruled on the matter of police protection. However, in
1856 the U.S. Supreme Court declared that local law enforcement had no
duty to protect a particular person, but only a general duty to enforce
the laws. [South v. Maryland, 59 U.S. (How.) 396, 15 L.Ed., 433 (856)].
The Fourteenth Amendment to the U.S. Constitution gives you no right to
police protection. In 1982, the U.S. Court of Appeals, Seventh Circuit,
held that:.. there is no Constitutional right to be protected by the
state against being murdered by criminals or madmen. ...

Feel better now???

Target shooting with an AK-47 is certainly a sporting purpose. Target shooting is an olympic sport. And BTW, standard AK-47 ammo, which is steel jacketed, is designed to wound and doesn't cause a "baseball sized hole". You are no doubt talking about the special hollow point ammo illegal in war but specifically designed for shooting game such as deer for sport. That "baseball sized hole" is designed to stop a deer in its tracks. With standard AK-47 ammo, the deer would run far away and then die. My SKS uses the same round and it is an excellent deer rifle. There's hardly any functional difference between my SKS and my uncle's semi-automatic Remington 30-06.

I have read all the posts in this thread this evening... All of them.

One conclusion... If the sane folks who believe that when guns are finally outlawed only outlaws will have guns outnumber the bleeding heart liberals by such a wide margin, why don't we just vote the bastards that have caused all this mess out of office? There seems to be a lot more of us than there are of them...

The "problems" wouldn't exist if there was true free enterprise in electric
generation.

All the "problems" are a result of incredibly complex, conflicting, and
restrictive government regulations and a distribution system with less
than "free enterprise" capabilities.

If anyone is really interested in just a surface analyses, go to

Or This::

In 1959, Linda Riss, a New Yorker, was terrorized by an ex-boyfriend, who had a criminal record. Over several months, he repeatedly threatened her: "If I can't have you, no one else will have you, and when I get through with you, no one else will want you." She repeatedly sought police protection, explaining her request in detail. Nothing was done to help her. When he threatened her with immediate attack, she again urgently begged the New York City Police Department for help: "Completely distraught, she called the police, begging for help, but was refused." The next day, she was attacked: a "thug" hired by her persecutor threw lye (sodium hydroxide) in her face, She was blinded in one eye and her face was permanently scarred. The Court of Appeals of New York ruled that Linda Riss had no right to protection. The Court refused to create such a right because that would impose a crushing economic burden on the government.
...
Judge Keating dissented, bitterly noting that Linda Riss was victimized not only because she had relied upon the police to protect her, but because she obeyed New York laws that forbid her to own a weapon. Judge Keating wrote: "What makes the city's position particularly difficult to understand is that, in conformity to the dictates of the law, Linda did not carry any weapon for self defense. Thus, by a rather bitter irony she was required to rely for protection on the City of New York, which now denies all responsibility to her." [Riss v. City of N.Y., 293 N.Y. 2d 897 (1968)].

This is exactly where New York City and New York State blew their right to
tell any citizen whether he or she can own (or carry) a weapon for self-defense. New York's own Court of Appeals tore up the State's half of the
Social Contract that is the foundation of its authority. This relieves citizens of their contractual obligation to obey the State's authority. More
recently, Mayor David Dinkins' police force ignored frantic calls to 911 by
Crown Heights Jews, and allowed rioters to trash the neighborhood in an incident similar to the Night of the Broken Glass in Nazi Germany. Antigun governor Mario Cuomo did not send the National Guard to restore
order. Can anyone argue that New York has not kissed its authority to tell its
citizens whether they can own or carry firearms goodbye? (If you want to

argue
on New York's behalf, read Locke and the Declaration of Independence
again- carefully.)

On 4 September 1972 Ruth Bunnell called the San Jose (California)
police
department to report that her estranged husband, Mack Bunnell, had
telephoned
her to tell her that he was coming to her house to kill her. In the
previous
year, the San Jose police, "had made at least 20 calls and responses to
Mrs.
Bunnell's home ...allegedly related to complaints of violent acts
committed by
Mack Bunnell on Mrs. Bunnell and her two daughters." Even so, Ruth
Bunnell was
told to call back only when Mack Bunnell arrived. Some 45 minutes later,
Mack
Bunnell arrived and stabbed Ruth Bunnell to death. A neighbor called the
police, who then came to the murder scene. The California Court of
Appeal held
that any claim against the police department: "is barred by the
provisions of
the California Tort Claims Act, particularly section 845, which states:
Neither a public entity nor a public employee is liable for failure to
establish a police department or otherwise provide police protection
service
or, if police protection service is provided, for failure to provide
sufficient police protection.'" [Hartzer v. City of San Jose, App., 120
Cal.Rptr 5 (1975)].

And don't forget the Los Angeles riots, in which police told frantic
citizens,
"You're on your own."
California, kiss your right to enforce your latest "assault gun"
legislation goodbye. California jurors should treat this legislation-
along
with California's other gun laws- with the disrespect and contempt they
deserve.
If you live in Washington, DC, don't forget that influential
Washington Post columnist Carl Rowan was not punished for violating the
city's strict gun laws.
If the law doesn't apply to him, it applies to no one.

Yep.

The 7.62 x 39mm round is underpowered for the weight of the round.
Maximum ballistic range is about 900 meters, roughly 1/2 mile.

According to Kalashnikov.

But then, what does he know, he just invented the thing.

Nope. At max ballistic range, you can flang that heavy, underpowered
round about half a mile.

Don't hope the change in Pres' will make much difference. What is overlooked
by eveyone is that it is the COURTS in Texas that don't tolerate murder.

The governer has little say in the matter in Texas.

Until all the states take a zero tolerance attitude (don't have to fry them,
just in case one is actually innocent, just keep them locked up for life),
it will be business as usual no matter who is Pres'.

What target, at what range?

Please, tell me, as I've never seen such a wound from the AK round --
they go in and stop, or go through and leave a permanent channel roughly
1/2" in diameter.

Perhaps you should stop quoting that absurd NBC news report tonight, and
stick to facts.

> and I've realized that such a rifle has no useful sporting purpose.

Yeah, right.

Gee, maybe he should have bought it from any of the dozens of places
which sell the ammo cheap.

> "liberal communist garbage".

I've got a pretty good familiarity with the AK and various of the
offshoots. I've handled a couple of dozen of them -- AK, Valmet, Galil,
etc. -- over the years which I've taught small arms. I don't think much
of it, really, and that's why I don't understand why you are so weak in
the knees over them.

So how many people have you seen killed by ANY firearm from a mile away? Sure, some sniper rifles are desgined to be effectivde at long ranges but not a mile. Not any ordinary rifle.

You're scared of your own shadow. Better start thinking about who you should really fear. If you communists succeed in getting guns banned you too will be at the mercy of the increased number of criminals who know they have nothing to fear from any citizen and little to fear from the police, whose main function is to deal with the AFTERMATH of crime. When was the last time you heard of a polcieman being present to actually prefent a murder from being committed?

Yeah, it will go a mile, but you will be hard pressed to hit anything
with it at that range.

I imagine you could stand a mile away from the Super Bowl stadium and empty
the thing in the general direction and hit something....

Jim Pennino

Gun control is 1 inch groups at 100 meters with a pistol; try doing that
in you spare time.

Beautiful, man. Well said. Brought a fucking tear to my eye.

Seriously though, I have a similar story; my dad taught me to respect the gun at a very young age. I'm 20 now, and the old 22 rifle he gave me sits in the corner of my closet, unloaded. When I first moved into my trailer, I think I reached for it once because I was scared shitless of a noise I heard outside; turns out it was only a raccoon or something going through the trash. I didn't fire the gun, or point it, or even load it, I just reached for it, just in case. Better to have the gun and not need to use it than not have it and have some maniac break into my house.

If one of those people in the recent shooting had been in possession of a gun, that McDermitt (or whatever the fuck his name is) would be on the ground and there'd be an additional 7 people walking around tonight.

Welp, here's what my "Official SKS Manual" says:
Maximum effective range: 1000 meters (about 0.62 mi)
Range to which projectile remains dangerous: 1500 meters (about 0.93 mi)
Extreme range of projectile: 3600 meters (about 2.23 mi)

That's odd. Ammo for the AK series is about the cheapest of any ammo out
there other than 22. Where are you buying your ammo, Ripoffs R Us?

As for the "baseball sized hole", what were you using for targets, real
people? Any rifle will make such a hole in a person, but not in the
paper targets most people use at ranges.

The AK/SK series is viewed by most serious shooters as a plinker and home
defense weapon at best; about the equal of grandpaws old 30-30 and about
the same power.

Better yet, why is it that the grossly ignorant "know" everything but
the facts, them ignore reality. There have been numerous interviews with
hardened criminals where they will frankly state that disarming the
populace is exactly what they want to happen.

If you handload, you can push any round beyond normal ranges. Military and commercial ammo isn't up to that level.

Also remember that the specs were drawn from Soviet (thus questionable) sources. The US Army tests showed a max effective range of about 300 meters, dangerous range of double that, and back on the ground at 900, which pretty much matches what Kalashnikov himself said.

It's all bullshit. There are two Great Truths involved: Gun control is a looney concept, the number of unregistered undectable guns in this country exceeds the number of citizens, end of any possibility for "gun control", it's all completely unworkable dreamy nonsense . On the other side of the fence is the fact that the number of citizens who pack for self defense is out in some far decimal place even in two-gun Texas. Citizens packing is a non-issue, you think the bean counters he took out would have packed under any conditions?? Gimmee a break!

Quoting from my SKS book: "Those wanting to maximize the possibilities
of their rifles will choose cartridges having expanding bullets, ideal
for North American medium and large game animals."

Sure sounds like a sporting rifle to me. And that 40 round magazine
really helps. ;-)

Come on John, the AK-47 (7.62X39) is one of the cheapest shooting weapons around. Chinese Ammo was $89.00 for 1200 rounds before the Clintonistas start banning it.

And I have no clue what you were shooting at that produced "A baseball sized hole" a milk jug full of water? I was the recipient of one of those horrible cartridges in the right arm complements of Uncle Ho and the exit hole was about the size of the entry hole.

You add the "no sporting purpose" mantra chanted so often by the left. Surprise the second amendment has NOTHING to do with hunting. It is to protect ourselves from an oppressive government. A few minutes of your time reading the federalist papers should dispel the hunting myth.

As to your last comment, how is the AK-47 any more or less dangerous than any other semi-automatic weapon that shoots a 7.62X39 round? Is it more dangerous than a Ruger Mini-Thirty, or a Daewoo 300? Or for that matter are there politically correct, safe guns that fire that cartridge? Do you think the bullet gives a damn about the name or model number stamped on the barrel?

I have a SKS with a Monte Carlo Stock I use for hunting and it uses the dreaded AK-47 bullet. Back to your original comment, "no hunting purpose" You know absolutely nothing about firearms or cartridges or you would recognize that the 30-30 which has taken more deer than any other weapon has the exact same diameter bullet. A silver tip in an AK-47 makes a good hunting weapon, it is rugged and accurate. There are no safe guns in the hands of a criminal or idiot, and no unsafe guns in the hands of a responsible citizen. Demonizing something as an assault weapon changes nothing.

Maybe you didn't look properly.

I just checked some obvious sites, and the news is here (and
probably on all kinds of other websites):

http://www.rac.ca

http://www.arrl.org

http://www.amsat.org

While this thread started with a post from someone who seemed to
be glad that there was a problem, I don't quite see why
a couple of people would say there has been a response without
there being some basis. The logical step then is to do some
looking around to see what the official websites are saying.

While I can think of plenty of times when groups have failed
because they didn't do things properly, the only way I can see
a satellite being perfectly non-risky is by not launching it.
Kind of defeats it's purpose. It would be a horrible thing if
this satellite doesn't work, after all the time and money put
into it, but even if it never worked it would hardly be a failure.

Was it Oscar 3 or 4 that ended up in a bad orbit, so it didn't
work out as intended? And then there was another Amsat sometime
in the past fifteen years, where a really large antenna had to
be used to make intital contact, because of some desensing problem.

But the first amateur radio satellite, and I thought the first amateur
satellite by any group, went up in late 1961. That was only four
years after Sputnik, the first satellite, went up. Don Stoner makes
a passing comment in CQ, wondering if anyone has any space in a rocket,
and soon someone had arranged space, and there was a satellite to launch.
Oscar One was a "completely useless" thing, with a life of a few weeks
at the most, and all it could do was send out "hi" in morse code;

I think some telemtry was sent by the method of controlling the speed of the code. What use was that? Nothing in the immediate, but terribly useful in proving that amateurs could build a satellite and empty space could be used to launch it, and then all the learning done to make it happen and track it.

While I would think some other group would have come up with the idea eventually, amateur radio was the first to hitch-hike into space. The whole concept has helped countries get into space who otherwise would not be able to afford the expense of big satellites.

The following Oscars weren't all that useful either. I don't iknow which one was the first one with a translator, but those early ones did not have a very long life, and there was that one that landed in a screwy orbit that made it's use problematic.

All that was before my time.

But I can remember when Oscar 6 went up in the fall of 1972. This was going to be the big one, more extensive than the previous ones and having a longer life. I forget exactly how long it actually lasted, but it kept going longer than they had said it would when launched.

Next year it will mark the fortieth year of amateur radio in space. Just like amateur radio is synonymous with radio, since the hobby dates back to the beginning of radio, amateur radio has practically been in space since the first satellite.

Each time an amateur satellite has been launched, it has served some purpose to extend the art. Our satellites may lag behind commercial satellites, but considering the budget considerations, we do pretty well. Those "crummy little satellites" from thirty to forty years ago may not seem all that spectacular now, but at the time they sure were, and there existence has helped lay the groundwork for the satellites that followed. People wouldn't have amateur satellites today that have lifespan in years, if those limited life satellites hadn't gone up, and any failures that have occurred over the years have helped make the next satellite better.

This latest one is number forty. There have been so many amateur satellites in these forty years that I can't keep track of them all. There must have been failures, and I thought the USSR launched some amateur satellites that used a different numbering scheme, so the count may be higher than forty.

That is an amazing accomplishment.

If this latest one doesn't work, it will be sad. But it is nothing to gloat about. And in truth, there will be future amateur satellites, and they will benefit from the launch of this latest one, whether or not it works.

Instead of trashing amateur satellites, we should be considering how few, if any, satellites are up there other than government, military and commercial. Yet there are such things as amateur radio satellites.

The real puzzle here is why we don't read about the launches in the papers, because even forty years after the first amateur satellite, another one is still a major accomplishment.

With something substantial other than a pile of bumper stickers reading
"Gun free and proud of it"; no.

With subpoenas and feel good laws that do more harm than good; maybe.

Unfortunately, sometimes I feel the Luddites are winnings.

When I see diseases that really kill people and that have been essentially
eradicated resurging because of fears of vaccination and pesticides,
I begin to lose hope.

When I see a "power crisis" caused by regulatory screwups, I begin to
lose hope.

When I see a significant portion of the population afraid of a mechanical
device, be it firearms, cell phones, SUVs, whatever, because the evening
news had a ratings getter scare story, I begin to lose hope.

When a person of European descent has to weigh every word they say but
a person in a "minority group" can spew racist garbage with no rebuke,
I begin to lose hope.

When a kid on a school bus lends her asthma inhaler to another kid that
is having an attack and is in danger of dying, and then is charged as a
"drug provider", I begin to lose hope.

When I see the endless arguements about basic science on rec.radio.amateur.*,
I begin to lose hope.

Sometimes I'm right there with George Carlin rooting on the giant comet.

It's difficult to believe that there are some people out there who are cynical enough to think that the legal system is so flawed that it would deliberately imprison innocent people. When the system breaks down, it is due to the actions of a very small number of corrupt individuals.

There are actuarial data on the "normal" conviction rates of arrestees for various felonies, and if there were some statistical abnormalities, then the DA's office would be subject to scrutiny. If a large number of not-guilty results were obtained, then either the DA's office or the local law enforcement agency would most likely be negligent in some way. An abnormally high percentage of convictions could either mean that the system is working particularly well in that community, or there is a systematic problem with evidence manipulation or other illegal activity. Normal conviction rates are quite high in major cities - often in the high 90% range - since there are so many checks and balances in play before the case ever comes to court.

I repeat my original premise that it would not serve society to soften felony sentencing or the societal repercussions of conviction in order to mollify those who worry about the fate of that infinitesimal fraction of people who might be falsely convicted.

No Genius, it was a Police station! Highway Patrol, to be specific.
And you know what? Almost to a man they supported private firearm
ownership. PRIVATE, not criminal. And there were a couple who had at
some time had their own butts rescued by an armed citizen.

We have that. You have to buy through firearms dealers in your own state. You can't order guns from out of state (although, when you could, we had much LESS violence in this country).
England has national gun control that's stricter than MA's. Look what it's gotten them: MORE violence, both with and without guns.
The stuff the Irish Republican Army uses (bombs, for example), is also illegal...

> (newsgroups trimmed to the original two)

It's on topic for talk.politics.guns (which is where I track the thread)

Oh John! Come on out of the 60's into Century 21. There has been Federal legislation governing all this since 1968. But, since it doesn't solve the "problem" you and all the other likeminded idjuts choose to pretend it doesn't exist so you can pass more Federal legislation that won't do it any better. What you REALLY want is what you want- something, anything! that will do what you want. Something that will end these isolated idiotic incidents which would never happen in the first place if passing laws was a good answer to social anomolies. It can't happen, but it doesn't matter, let's just pass laws all over again, and again, and again.....You won't be happy until the only guns anywhere are in the possession of people who couldn't care less about how illegal they are. It's up to the rest of us to make sure we head off your stupidity. We will. You can depend on it. You'll die of old age still wishing.

That's optimistic by about 300%. You'd do extremely well to get 300
yards effective range from that weapon. The only possibility of hitting
anything with it at that range would be to empty a full magazine, one
shot at a time of course, at one (target) point, then you might get one
lucky hit.
I've got one of 'em, too. Crudely made things but they do work well.

(And subsequently restored.....)

D'you REALLY believe that inanimate objects were the root cause of this
tragedy?

D'you similarly blame the car driven by a drunk driver in Illinois this
past weekend for the death of a fireman who was hit by it?

If I whack hell outta my roommate with a baseball bat because I tripped
over his damn boots AGAIN, can I blame the bat?

I've never heard of that anonymous stuff happening, except maybe on rrap :-) but I wasn't talking about any kind of phone survey. I was just talking about me walking around looking at people in my everyday activities. It is very unusual to see anyone (other than cops) carrying a gun in the Phoenix area during their daily activities, even though it would be legal for them to do so. And the last time I heard, the CCW permits were still way under 1% of the population. Apparently the general population doesn't seem to perceive the same threat level alluded to in these newsgroups.

>When I lived in rural AZ, I found that about 1/3 of the folks carried a
>social pistol.

I can't disagree with you. I'm a city dweller, having lived in the Phoenix area for the past 53 years. I'll have to amend my estimate to read that 99% of the big city's population don't carry guns in their daily activities. So how come the rural folks are so paranoid? I thought it was supposed to be safer in the sticks... :-)

I don't know if statistics bear that out. Most of the shootings in
Phoenix have nothing to do with preventing crime. They seem to mostly
involve things like domestic violence, gang shootouts, drive-bys, road
rage, and kids accidentally shooting each other with "unloaded" guns.
And then there was the cop who was carrying a derringer in his back
pocket, dropped it, and shot himself in the posterior. Fortunately his
pride was wounded worse than he was...

>It DOES give them considerable pause. It is a researched and proven fact.

Phoenix was being called a murder capitol a few years back, but I
think we're doing better now...

Packing on the person, routinely, you have it right, and rightly so.
Wearing a hogleg all the time is almost a fulltime job, ask any cop.
Lotsa responsibility to be safe with it and keep it secured. That's not
for the casual. But to be able to hang it on when you know you're
heading into questionable real estate, or tuck it in the car under the
same circumstances, legally, is another matter.

Citizens packing is a
> non-issue, you think the bean counters he took out would have packed under
> any conditions?? Gimmee a break!

All true. So Lotsa places have full time security guards nowdays. I
stayed in a Holiday Inn in Birmingham, AL just off the Interstate a
couple years ago that had a fully commissioned city cop stationed in the
lobby at all times, both day and night. Then I gassed up the car nearby
after we left, and darned if there wasn't one inside the Get'n Go, too!
We got outa town right after that, any place that needs all that looks
too dangerous to me.

On top of all that, Bill, how about our prisons, which are the most tightly controled environments possible, and yet criminals still get weapons, drugs and commit crimes on a daily basis? I got news for anyone that thinks more control by authorites makes one safer; our prisons are among the most dangerous places in the country, and there the authorites have nearly absolute control. If authorities cant control weapons, crime and drugs in prison, what makes anyone think that these things can be controled among a free people at all?

Most states have laws to deal with the theats of domestic violence
which almost always precede the violence itself, if only the people
involved including officials will act on the warnings. Too often they do
not, as noted in my earlier post on same subject. Any firearm should be
confiscated from anyone who threatens a spouse with them, with a
prosecution followup. Mostly these deals are dropped, then flare again
later with worse result. Most jurisdicions would support that if
followed up, but for sure not always. Not the fault of the weapon tho,
and no reason to disarm the whole population.

>gang shootouts, drive-bys,

Laws don't do much of anything to affect those. Gotta have dedicated
effective "Gang control" police details. Worked very well here. The
"Chicago Boys" didn't last very long, got too warm for them.

>road rage,

Another brand of stupidity.

>and kids accidentally shooting each other with "unloaded" guns.

Security problems need to be dealt with. If firearms are in the house
the kids must not have free access. And kids need GOOD education in the
subject of safety and strict parental admonition to "DON'T TOUCH under
penalty of serious sanction." Not many kids get much of that these
days. That's no valid reason to disarm the populace.

You can be assured the "right to carry" law has helped that. The
opportunists don't feel nearly as opportunistic.

Dick Carroll <dixie@townsqr.com> wrote:
> So how many people have you seen killed by
>ANY firearm from a mile away?

Several people in Phoenix have been killed over the years by stray shots from great distances. 14 year old Shannon Smith was one recent victim. She now has a law named after her. It seems to be working. Now we only have 9853 shots fired calls (during a 6 month period) to police. People should feel much safer...

Police to New Year's revelers: Hoot and holler, but leave that gun at home

By Christina Leonard
The Arizona Republic
Dec. 27, 2000 12:00

Last year, they prepared for the worst.

And New Year's Eve went relatively smoothly.

This year, law enforcement officials are armed with a new law that makes it a felony to fire a gun negligently within a town or city. They are making their point more forcefully than ever: Don't fire your gun into the air.

It's dangerous. And it's illegal.

Since "Shannon's Law'' went into effect in July, the Maricopa County Attorney's Office has successfully prosecuted 17 cases under the statute, County Attorney Rick Romley said during a news conference today.

Not only are prosecutors taking the cases seriously, the judges are too, he observed. One defendant was sentenced to four months in jail and three years probation. Another faces three months in jail and 200 hours of community service.

The law is named after Shannon Smith, a 14-year-old girl who was killed by a stray bullet in June 1999.

Phoenix Police statistics indicate a drop in "shots fired" calls in recent months. From July 1 to Nov. 30 this year, the department received 9,853 calls compared to the 10,436 they received last year over the same time period. That's a 6 percent reduction.

The random shooting had declined during holidays even before the law went into effect. Calls on New Year's in 1999 were down from 1998 by 36 percent, and calls on the Fourth of July this year were down 28 percent from 1999.

"Last year was the quietest New Year's anybody could remember," Phoenix police Sgt. Randy Force said. "Everybody was so apprehensive about Y2K, and everybody in the police department was working. That kept everybody quiet."

"But I don't know about this year. We don't know if people will go back to their old habits, or if last year will become the norm."

Officials and community members gathered at St. Joseph's Hospital and Medical Center this morning to publicize this year's campaign against random gunfire and to talk about the apparent effectiveness of "Shannon's Law" thus far.

Phoenix Assistant Police Chief Mike Frazier said New Year's is their busiest time of the year, and they will again have officers out in full force.

Last year, a 14-year-old boy was the Valley's only reported injury from random gunfire when he was grazed in the head by a bullet while leaving a New Year's party.

Officials and community members said they've worked hard to publicize the dangers of random gunfire, and Phoenix Councilman Phil Gordon said the city has applied for a grant to purchase "spot shot technology" that automatically dials police when gunfire is detected in certain areas.

Otis Smith, Shannon's father, said the family has been surprised by the high number of cases filed under the law. He said that witnesses are more willing to come forward for felony cases involving random gunfire.

Officials also attributed the drop in gunfire to media awareness campaigns and neighborhood activists who spread the word by handing out fliers.

"Shoot off your mouth instead," Otis Smith said. "Hoot and holler. Have a good time. But be safe and leave the guns behind."

Which is an example of precisely the kind of poor planning I"m
talking about. This isn't a warehousing decision for Chrysler...this
is people and their lives. The responsibility of the elected
representative is to prepare for the worst, knowing that capacity
built, will be capacity used, either in unusual circumstances, OR
eventually as population grows. This nonsense of building 'just
enough,' is criminal negligence. And letting bean counters run the
show, especially in this kind of civil endeavor is the height of

absurdity.

No, it's also profit motive. It's cheaper with fewer
administrative hassles to transmit, than it is to generate.
>
> One problem of deregulation is that old plants which cost a lot to run

Again, administrative hassles, fuel price instability,
environmental factors which in turn impact fuel price stability,
environmental factors which threaten the very existence of high
capacity efficient plants...lots of reasons...but all of them under
a single umbrella...poor planning.

We just had a rollback of the gasoline tax in Illinois. To bring
prices down to manageable levels. That tax is set to go back into
effect in Jan. We had $2.50/gallon fuel here this summer. We're
going to be at $2.00 again in the New Year.
>
> What did you pay for gasoline 5, 10, 15, 20, 25 years ago - adjusted

Not according to my pay scale. I could fill my tank for less than
an hour's work back then. Today it's just less than 1/3 of a day.
>

> > unusual in this area.
>
> It's the timing and duration.

No it happens and it's un predictable. The notion that -20 degree
temperatures happen only rarely is not an excuse not to plan for
them. People still freeze when you shut the electricity off, and
they still go broke paying for heating gas. You plan for what will
happen, not what is likely to happen 8 times out of ten. Timing and
duration are a crap shoot taken by planners that end up being paid
for by those who can least afford it.
> >
> > It's just poor planning, and restrictive laws that interfere with

>
> But there are more of them, and people are driving them more.

They are driving them more because alternatives are fewer. I'd
never drive if the busses ran where I need them to. I can take a
train, but can't find a cost effective run from teh train to my
destination because the bus lines serving those routes have been
discontinued.

> And the
> big ones outsell the little ones. How many SUVs are used for commuting
> a single person, and are basically status symbols?

The fuel expenditures caused by driving SUV's over more standard
fare are somewhat less than you'd expect. Only in the case of those
huge monsters does the fuel consumption difference between a
passenger car and the SUV become slightly more than trivial.
Remember that the bulk of SUV's get better mileage than the average
Lexus, or Infiniti or other luxury sedan. I can drive my Caravan one
and a half times the distance of a big Mercedes sedan on the same
gallon of fuel. One and a third times the distance of the average
Lexus. I get the same consumption as a Jeep, and a Montero, slightly
more than a 4 runner, and about a third less than a Tracker. All
popular SUV's. And I get about 2 mpg more than a Chrysler sedan.
Including the Intrepid and the Sebring.
The number of Navigators and Excursions don't account for a huge
amount of fuel spent, over the amount of fuel consumed if those
drivers were in Jeeps.

The SUV is not the problem.

The Exxon Valdez mess had a lot less impact than we were lead to
believe. But there is always pipeline. There are tanker cars by
rail. If you don't like ships, there are alternatives.

Look on amsat.org

They issued a hard reset and telemetry is running on S-band so far.
They have to upload all the operational software now.

Probably the biggest single reason why the US has never been invaded by force is due to the perception by our enemies that they would have to fight every American on every street in every town, not just those in the military. I'm sure that they are all just sitting back watching as the liberals try to disarm America, and just biding their time...

Fortunately for America, there are still enough citizens with guns (most who will never give them up for any reason) to create a deterrence. If and when the sh.t does hit the fan, watch how fast the anti-gun crowd runs to buddy up to their closest armed neighbor...

But the mere fact that it is possible for a citizen to carry a firearm has a great deterrent effect on the criminal. A bad guy is not so quick to mug granny at the ATM if he thinks she just might be armed. She needn't be, all that is needed is the doubt in the mind of the bad guy which is created by the carry laws.

Just check the violent crime rates between states with citizen carry laws and those without. The facts speak for themselves...

Brian, unless you knew them, you have absolutely no basis to imply that they didn't want to carry a defense gun. You are merely displaying your own prejudice with such postings.

Until the law which I was in part responsible for passing, guns could
only be carried openly, and many folks did just that.

Following the CCW law in the early 1990s, a lot of people who carried
openly began carrying concealed (often without state permission).

> And the last time I heard,
> the CCW permits were still way under 1% of the population. Apparently

Go talk to your local cop. Ask how many times he or she has stopped
someone and asked if they had a permit for their concealed weapon,
compared to the number of times they knew that someone was carrying but
didn't bother asking.

Why do you think that is IS safer? The cityots have cars. Coyotes and snakes don't know that it's impolite to attack people. Rural folks tend to know that their personal safety is their personal responsibility.

He knows EVERYTHING about guns. Unfortunately, he only remembers the
stuff that's wrong.

If he really is a doctor, this is a good explaination for the high rate
of doctor-induced negligent death in the US.

Federal gun registration will meet the same problem President Al
Gore did, the Constitution does not allow for it. The Federal
government has no constitutional authority to regulate private
ownership of weapons.

penguins?

speaking of which....

A Mexican newspaper reports that bored Royal Air Force pilots stationed
on the Falkland Islands have devised what they consider a marvelous new
game. Noting that the local penguins are fascinated by airplanes, the
pilots search out a beach where the birds are gathered and fly slowly
along it at the water's edge. Perhaps ten thousand penguins turn their
heads in unison watching the planes go by, and when the pilots turn
around and fly back, the birds turn their heads in the opposite
direction, like spectators at a slow-motion tennis match. Then, the
paper reports, "The pilots fly out to sea and directly to the penguin
colony and overfly it. Heads go up, up, up, and ten thousand penguins
fall over gently onto their backs.

Hello: My computer took out the receiver to about 10 MHz. The fix for this was a AC Line Filter, made from a Radio Shack snap together ferrite core, and two .01 uF disc caps connected across the AC Line, one at each end of the AC Cord would around the ferrite snap together core.

This reduced the interference big time. I can still hear a few buzzing signals on 80 and 40 meters, but its most acceptable.

Like this one? Is Pataki a Democrat?

ALBANY, N.Y. (Reuters) - New York's Republican Governor
George Pataki appeared on Wednesday to reopen the wound
of president-elect George W. Bush's past arrest for drunk
driving with an unusual remark while introducing a new
state commissioner.

As Pataki, who flew to Florida to defend Bush in the
election recount impasse earlier this month, appointed
Raymond Martinez as Department of Motor Vehicle
Commissioner, a reporter asked if his choice ever had
been ticketed for speeding or drunk driving.

Martinez replied, ``Yes, I have a DWI from 1989, and also
a speeding ticket from 1997.'' DWI is shorthand for a
``driving while intoxicated'' offense.

``I guess that qualifies you to be President of the
United States then,'' Pataki said.

Pataki's spokeswoman had no immediate comment on the
governor's remark. A spokesperson for Bush, who is
vacationing in Florida, was not immediately available for
comment.

After Pataki's remark, there was a brief pause and then
the media conference continued.

During the waning days of the presidential campaign, Bush
admitted he had been arrested in 1976 for drunk driving
in Kennebunkport, Maine, when he was 30 years old.

Bush, who pleaded guilty, paid a $150 fine and had his
permission to drive suspended for 30 days, noted after
the incident came to light that he had stopped drinking
14 years ago.

They're not paranoid and they are safer. It takes longer for
the police to respond in the rural areas. By the time the
Maricopa County sheriff gets to Queen Creek, all there is for
him to do is write a report. Probably 20% of the adult males
in Apache Junction are armed.

A traffic cop would be the one to ask. When a person is carrying concealed,
he/she is supposed to produce his/her concealed carry permit along with
his/her driver's license.

I've already figured out the plan. The clandestine BARF boobs (same
same Stumpers) will be doing a campaign of drive-by qrming. Parot has
already done his bit and is getting more 'brassy'.

Keep up the campaign. He may pay you attention. Guess what else is
going on? I got a landline yesterday from a friend. He said Jamming
Joe (KBX) was saying some crap about coming onto 275. And David (KJI)
said I was interfering on 313. I was working on a new digital program
on the bottom of 20 at the time.

Like I said....it is just beginning to fester.

I'll tell you this tho...I wont roll over and play dead for these
goofs. They best stop now, while they can.

Dan/W4NTI

Statistics show that people who take the trouble to obtain a concealed
weapons permit are less likely to be involved in episodes like domestic
violence and road rage. A group of Texas legislators was against the
concealed carry law because they believed gun violence would increase.
They held their collective breaths and gun violence decreased. Concealed
carry permit holders exhibit a much lower crime rate than the general
population. Those same anti-concealed carry legislators are now pro-concealed
carry.

Military civil engineers. This thing was extremely well planned and they knew exactly how far it was to the Confederate Officer's tent. They set elevation and windage and hit the Confederate Officer's chest dead center.

Actually, one can buy guns from out of state and have them shipped
to an approved dealer in one's home state. One picks it up at the
dealer's place of business.

It depends on which interpretation, conservative or liberal, one
takes to The Constitution. Conservatives would agree with you.
Liberals say The Constitution doesn't prohibit gun registration
and mere registration doesn't violate the 2nd Amendment.

Noise can come from the power supply/computer and the monitor. Some monitors
can be extremely noisy and one resolution and quite at another.

First, make sure everything, radios, computer, monitor, etc. are well grounded.

Turn off the monitor only and see if there is a change. If so, try changing
resolutions.

Take a hunk of coax with a couple of inches of center conductor exposed
and use it with your radio as a "sniffer" to see if you can find an especially
noisy cable/power cord.

Put several ferrite chokes on any cable/power cord that appears to be
noisy.

> Most states have laws to deal with the theats of domestic violence
>which almost always precede the violence itself,

Those laws certainly help, but like gun laws they don't always work.
There have been several instances here in Phoenix where a man is under
an 'order of protection' (court order) restriction and has still gone
ahead and murdered his wife.

>if only the people involved including officials will act on the warnings.

In Phoenix it is mandatory that the officer arrest and jail either
party in any domestic violence crime for which he can develop probable
cause, whether or not anybody wants to prosecute.

> Any firearm should be confiscated from anyone
>who threatens a spouse with them,

Threatening with a gun is a felony (aggravated assault) in Arizona.
The gun would be automatically impounded as evidence after the suspect
is arrested and booked...

That is the "little secret" that the anti-gunners so carefully ignore.
Weapons possession reduces and prevents crime without a shot being
fired. Almost all cases where a gun owner defends himself are cases
where the situation is immediately settled and the perp flees the second
that a defensive weapon is becomes apparent to him. The few where a gus
is actually used are the cases which get all the press coverage, and of
course all the negative play by the anti-gun crowd.

Nothing "always works". Thus the necessity for individuals to be free
to proterct themselves. Not too long ago a wife who suffered long term
spousal physical abuse offed her tyranical husband. No prosecution.

That's what I keep saying, based on long years of experience. The main role of the police is to deal with the aftermath, to make the reports and assist ewith prosecution when applicable. Cases where police actually violent foil crime in progress are very rare.

But you haven't answered the question. How rare an event should be
planned for? For another example - should all construction along the
southeastern coast of the US be required to be built to withstand a
hurricane that comes once in 100 years?

> This isn't a warehousing decision for Chrysler...this
> is people and their lives.

Yup. So is the environment, health care, and public safety.

> The responsibility of the elected
> representative is to prepare for the worst, knowing that capacity

> eventually as population grows. This nonsense of building 'just
> enough,' is criminal negligence. And letting bean counters run the
> show, especially in this kind of civil endeavor is the height of
> absurdity.

Ahh - but that's EXACTLY what happens when "the free market" is allowed to control things. The "market" dictates that cheap energy is the prime consideration, so no "excess" capacity is allowed to exist, because it raises prices.

Look at supermarkets - do they stock enough food for the worst possible case of high demand and service disruption? No - they try to just meet the market demand. What they carry and how it is priced fluctuates based on a number of factors. And in areas where the price of doing business is too high, supermarkets do not exist.

But anybody with enough capital can open a supermarket if they see an opportunity. If Acme's management is poor, customers go to Genaurdi's. Most urban/suburban areas support several competing supermarket chains. Energy supply utilities are not like that, and I don't see how they could be.
> >
> > That's one of the reasons utilities were so heavily regulated - to

What you are pushing for, Peter, is more regulation of the utilities. That's not a bad idea.

Of course! But the "free market" forces it.

Let's look at a simple example. A generating plant consumes a certain amount of money whether it runs or not. Most plants are most economically efficient when running at or near capacity. So the owners of those plants are going to try to run them at or near capacity all the time unless something else forces them not to. And they will try to run the ones that are cheapest to operate, unless something else forces them not to.

Any excess capacity will soon be "orphaned" because there's no profit in owning a plant that sits idle. Then along comes unusually high demand, and....you know the rest.

In the short term, yes. But in the long term, it makes the most sense
to have a well run single utility in an area. But that's not econo-
politically correct today. (See Richard McCollum's post in this thread
on the Nebraska experience.)

Let me repeat the main point: It's not just the "tree huggers". They
are just one factor - a minor one, at that. But Fred blamed them and
ONLY them.

> > One problem of deregulation is that old plants which cost a lot to

How do environmental factors affect "the very existence of high
capacity efficient plants"?

The "who bells the cat" question is - "who does the planning"?

> going to be at $2.00 again in the New Year.

Why such a dramatic difference between prices in IL and PA? Surely the tax structure isn't that different.

And the basic fact is the same: The price of gasoline is not very high when adjusted for inflation. Here's a snapshot of the PA area (regular gas):

In the '60s, gas was about 25 to 30 cents a gallon, depending on a lot of factors. Back then minimum wage was a dollar and change, and one $10,000/year salary afforded a comfortable middle class lifestyle for a family of four. A nice new car was $2000-2500.

Then came the 1973 oil embargo. Gas prices doubled almost overnight. When things calmed down, gasoline stabilized around 50-60 cents/gallon. Inflation rumbled through the '70s, and pretty soon the minimum wage doubled too.

The embargo of 1979 pushed gasoline over a dollar. I recall paying almost $1.50/gallon for regular gas - in 1980. Since then, the price of gasoline has wandered up and down, while other things have slowly but steadily risen.

What's the minimum wage today? How much is a new car, or a nice house in a nice neighborhood with decent schools? Ten times what it was 30 years ago, easy. Gasoline is dirt cheap by comparison.
> >
> > What did you pay for gasoline 5, 10, 15, 20, 25 years ago - adjusted
> > for inflation? It was more back then, not less.
>

With all due respect - your pay scale isn't keeping up with inflation, then.

> I could fill my tank for less than
> an hour's work back then. Today it's just less than 1/3 of a day.

What has changed?

Also, how much it takes to fill up is not a good indicator. How often you fill up matters, too.

Agreed - but the planners are driven by "market forces" unless there is
regulation.
> > >

> what the real dread is by either side.

I brought up leaded gas because of the unilateral blame put on
environmental concerns. Of course going back to leaded gas is absurd -
because almost everyone now accepts that spewing huge amounts of heavy
metal into the atmosphere isn't a good idea in the long term. But those
who opposed lead in gasoline used to be called all sorts of names.

I could be mistaken, but it's my understanding that what really killed
leaded fuel was the catalytic converter.

cases
> > to import it than to extract it here.
>

> That's because the domestic supply has been cut.

Again - WHY has it been cut? In part because the "easy" oil has mostly
been extracted.

20 years ago one of the major oil companies invested over a billion
bucks into a serious fullscale shale oil extraction setup. It really
worked - but the oil produced cost over $30/barrel. It ran only a short
time, and then OPEC prices dropped and it was shut down.
>

Again - because the alternatives require good planning.

> I'd
> never drive if the busses ran where I need them to. I can take a

They've been discontinued because the playing field is tilted against
them. And because transit is not "sexy" the way driving is.

> Including the Intrepid and the Sebring.

I drove a rented Intrepid recently and got in the high '20s. My Saturn
and Honda Civic get in the high '20s in the city and in the high '30s
on the highway.

But they all pale in comparison to my 1980 VW Rabbit Diesel, which got
well over 40 mpg in traffic and well over 50 mpg on the highway. Newer
VW diesels do even better, and are bigger and better performing than
the old ones.

> The number of Navigators and Excursions don't account for a huge

Both sides were mistaken. But it was Exxon that did the poor planning
of using a single-bottomed tanker and a captain who made bad choices at
the time.

Of course - but those alternatives take long term planning!

We should be moving away from fossil fuels anyway - but again, that's a
long term thing...
> > >

Right! It's easier for him and folks who think his way to just
oversimplify the problem and blame one group than to deal with the
complexities, long term solutions and compromises needed.

find the source of the rfi...
use al-foil / flat coke can etc to help isolate the source
then ya gotta work out a way to sheild the offending component (or paying
the $35 4 a new p.c. p/s) :)

That's not fair, now they will have to think up an excuse.

Dave

4098. Looking for Information on Notable Amateur Radio Operators

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-28 19:09:37 UTC
From: "Terrence R. Redding, Ph.D." <terry@oltraining.com>
Message-ID: <B670FA18.C324%terry@oltraining.com>
Source record: 96816

I am collecting personal histories of amateur radio operators who have made a major contribution to the development of technology in the 20th Century.

I use as a study population, amateur radio operators because of their obvious high self-directed learning nature.

In the past I have published the following research papers:

Redding, T. R. (2000). High Self-Directed Learning: A National Imperative in the Information Age?. In H. B. Long (Ed.), In press - title to be determined. Norman, OK: Public Managers Center, College of Education, University of Oklahoma.

Redding, T. R. (1997). Association of historical events and the development of self-directed learning readiness of amateur radio operators. Unpublished doctoral dissertation, University of Oklahoma, Norman.

Redding, T. R., & Aagaard, L. (1992). A descriptive study of the construct of self directed learning. In H. B. Long (Ed.), Self-directed learning: Application and research (pp. 147-162). Norman, OK: Oklahoma Research Center for Continuing Professional and Higher Education, University of Oklahoma.

Redding, T. R. (1991). Spark-gap to space: A descriptive study of self-directed learning. In H. B. Long (Ed.), Self-directed learning: Consensus and conflict (pp. 155 176). Norman, OK: Oklahoma Research Center for Continuing Professional and Higher Education.

The basic premise of this paper will be that high self-directed learners have made a significant contribution to the national good through their inventive nature, and highly creative response to change. Else where I have established that amateur radio operators can operationally be defined as high self-directed learners.

I am looking for examples of amateur radio operator contributions to the development of technology in the 20th Century, and or examples of where amateur radio operators have made a significant contribution through the establishment, management, or leadership of well known businesses, corporations, and organizations.

Please send personal histories, case reports, biographies, and research sources that I should review to w6lmj@arrl.net.

If you have items you wish to mail, they should be sent to Terry Redding, OnLine Training, 2669 Forest Hill Blvd, Suite 207, West Palm Beach, Florida 33406.

If you wish to speak with me I can be reached at 561-357-0841 during the day, or at 561 439-7790 at night. I am also pleased to set schedules on HF

or VHF if that is possible.

Looking forward to all responses.

Terry - W6LMJ

Of course, a .22 says on the box that it is dangerous to 3 miles. When one refers to range, it is normally though of as DIRECTED range. A minute of arc, the holy grail of accuracy puts a projectile off 1" at a hundred yards. I leave the math to you to see how far you are off at a mile. We won't discuss other factors such as wind and superelevation that add to the mix. A one mile directed shot from an AK-47 would be the most luck filled shot in history. Now before someone comes back and tells me how their sniper buddy in Viet Nam could shoot the "O" out of a coke bottle at 27 miles with a BB gun, NO ONE consistently makes shots at much over 1000 Yards and those that can at 1000 yards are far and few between.

I have been stopped a number of times at DUI check points, as the officer approached I put both hands in view and announced "Sir! Be advised I am carrying a concealed weapon" In spite of the fact I am licensed to carry, not once have I been asked to show my permit.

Here in Georgia one may carry a loaded weapon in the car as long as it is in clear view.

> >

It would be much easier for a madman with a skillet -- or a small
but lethal knife -- to sneak up on a victim, or even walk right up
to the victim without his suspecting anything, than it would be for
the same madman with a large semiautomatic rifle. None is any more
deadly than the other.

So, not only do I stand by my statement that they are equally
effective, but upon reflection I can see some situations in which
the "assault" weapon is less to be feared than others.

In the real world, of course, it's the madmen (and madwomen) who
ought to be feared, not inanimate objects utterly incapable of doing
harm on their own.

That doesn't matter. But my wife does have several skillets.
Luckily, the usual practice here in town is to put madmen and
madwomen in a mental facility called Generose, several miles distant

from our happy abode.

Pip pip,

I'm proud to wear that label. Do you ever notice how these black folks
tend also to put on a religous experience? It's in the culture to live
like an animal, and in thier culture to want something for nothing. Do you
ever notice how blacks try to haggle at the store? It makes me sick.

Another Questions comes to mind, Fred. How did this black trash get on the
this Newsgroup? Was he recruited by AF2Y? Does he even have a vaild Ham
ticket. It would interesting to know if he does. He could start using his
real name and call. If he even has one. He probably dont even know who
is daddy is. heh heh

This one? "Had Dennis Raymond Remont respected a court order preventing
him from coming within 500 feet of his ex-girlfriend's Kent, Wash, house,
he might still be alive. That document was of little comfort to the woman
when he not only ignored the protection edict, but intentionally set out
to do the woman harm. Remont realized he'd made a mistake, however, after
arming himself with a butcher knife and forcing his way into her home. The
woman had company - and he was a force to be reckoned with. When the man's
licensed firearm rang out, Remont's reign of terror was halted permanently.

Anyone who "sticks a gun in your face" is an idiot. Given human
reaction time, there is no way he can pull the trigger before
I've grabbed the gun and pointed it in another direction. If
a gun is within reach, it is much less of a threat, especially
if the gunman is small and I am the size of Hercules (on TV).
You followed me around at a hamfest, Jones. Would you stick
a gun in my face? Would I risk my life for $100 of my money?
You bet your sweet bippie. Somebody has to stand up to evil.

What we need is a law making it illegal to kill innocent people. With
such a law enacted, people would not kill people.

The thing that upsets me the worst, is someone of any race who spews profanity, references everything to sex with one's relatives and in general acts like a jackass.

This type of person puts forth filth and vial language that no self respecting person would put up with from any one. Then if you object to the boorish behavior, it is you who are the racist because this particular jackass happens to be Black.

I doubt that you could have stopped that one. That was one BIG dude.
If he had walked in with a couple of gallon jars of gasoline, he could have done far more damage, and there was no one to stop him. Why/how did he even get in the building with guns that size? Why did he stop with only seven dead? Do you suppose that they had each been particularly unpleasant over his troubles? Haven't most of us had trouble with clerk types who absolutely will not try to help in any way, shape, or form? The news accounts tell us that he did not work with the victims, but don't go so far as to say that he had had no contact with them. I don't believe that the shootings were as random as we are led to believe. "Random shooting" is one of those phrases that reporters are required to use; a "hot button" for the masses.

Who did this webpage... WWW.435.ORG ?? It looks like a 10 year olds first web page! There are so many mis-spelled words, broken links, and the page of pictures is missing all the 'THUMBNAIL' photos.?

Also, for a long time, thet have been promising LIVE 435 audio from 147.435 Mhz. in Los Angeles, but it still doesn't work.

To KD6GDB, you need a course in English, spelling, composition, and a good day or two in updating and fixing errors on your site.. Are other 435 users proud of this web site? I don't think so.

The 147.435 repeater is notorious, and I have heard it many times. Fortunately, I have found live audio for it from another source..

And how long have you been trying to pass a simple 5 wpm CODE test now????

>He probably dont even know who is daddy is. heh heh

Well, when yours got out of Iowa State Prison, then you had to move to Alabama, huh Lardo Lloyd, who checks into the most perverse chatrooms on a nightly basis. Lllllllloyd checks into the pedo chat rooms, hoping to pick up little boys. LLlllllllloyd's a regular in those kind of adult chat rooms online. Of course, being a almost 30 -year-old virgin may be quite a selling point for you,
Lllllllllllllllllllaaaaaaaaarrrrrrrdaaaaaaaassssssss
Llllllllllllllloyd. Of course, no woman would give you a second or third or any thought.
Oh, and I could be your daddy, Llllllloyd.....your retarded momma sure do give us brothers great head..I guess she needs a man's cock......that's why she adheres to the maxim, "once you go black, you never go back." That might explain your intolerance, along with the genetic defects that are quite obvious.

ROFL...As I read this, I thought I'd recommend that Lloyd try to meet a black woman, but then I realized that would never happen...no self - respecting "sister..." well, you know the rest. FWIW, can you imagine Lloyd "gettin' jiggy" to "E.I." by "Nelly?" Nahh, neither could I! LOL

Lloyd's daddy was in prison, eh? That would explain his move from Cedar Rapids to Alabammuhhhhhhh. Lloyd once complained about how "unfriendly" the people of Cedar Rapids were. I guess they just have no time for peckerwoods...too busy making a good living, enjoying one of the lowest crime rates in the US, with one of the highest standards of living. Lloyd just wouldn't fit in. He really lives in a HUD apartment? Yet he claims to hate the government. On the one hand, he hates Uncle Sam...on the other hand, he's got the Federal tit in his mouth.

Didn't Jesus say that hypocrites are destined for Hell?

How very, very illuminating.

Actually, those guys are NEVER expecting any response other than surrender. When you offer a quick defense, they have lost before they get over their shock.

I covered a story in Michigan where a college coed, with a pistol pointed at her, was able to draw her pistol and drive off both would-be rapists -- after the one with the pistol dropped it in shock.

>
> Yet, surprisingly, most don't act like Rambo.

And Joe Citizens shouldn't act like Rambo either. People
shouldn't put a cop into a position where he might react
and act like Rambo either.

Unless it is relevant to the situation, the cop has no business
knowing that I am carrying a concealed firearm. Only an
idiot would announce the fact, unless it might be an issue.

For example, I take my handgun from my belt and slip it into
the glove box for comfort. But I get pulled over, and the cop
wishes me to retrieve something from the box. THEN I tell
him. Actually, what I would do is say something like "Officer,
I have a firearm in there. How would YOU like me to handle
this?"

Otherwise, a concealed firearm is should be EXACTLY
that, a CONCEALED firearm, and you just portray yourself
as a Rambo wanabee when you do something childish like
announce to an officer for no reason "I have a permit and
a concealed firearm". Ifs it's not an issue, WHO CARES!

But to be fair, I can see where it might be an issue. I had
a 357 under my coat, and was called to the local PD. I
ran there on my motorcycle, and was asked to ID someone.
When I said yes, they politely led me to a door, then roughly
grabbed me and led me into this room and shoved me onto
a bench. I wasn't prepared for it Then I was locked in
for a few minutes. But I had a 357 under my coat. Shit!!

Finally after what seemed like hours, but was in fact only a few minutes someone yelled a name out in the hall (not mine) and the door was flung open and a cop came in and grabbed me by the arm and a little bit roughly pulled me out.

I must have been ashen, because they apologized but said they wanted to do it that way for 'my protection'.

I think the cop shit his pants when I unbuttoned my coat and showed him why I was one step from a panic in the room...

Oh, I did ID the guy, but it wasn't that solid. But enough.

He skipped bail anyway. Don't think they ever caught him.

Mike

Sure, but there's a hell of a lot of difference between a continuation of our fight against the British - one which we started as payback for continued British actions after the Revolutionary war - and that of an armed invasion by a modern military or terrorist force.

A little clarification:

"Historian Norman K. Risjord discusses materialistic and economic reasons for the war of 1812. The Twelfth Congress, also known as the War Hawks were quite land hungry, lead by Henry Clay they pushed for war with Indians as well as Britain. The desire for land, Canadian or Indian, fear of a British-backed Indian conspiracy, concern over the declining prices of agricultural products and the restrictions of markets abroad all have been believed to have been basic causes of the war."
"Speaker of the House Henry Clay could not ignore the impressement of American sailors by British fleets, this was another driving force. Henry Clay assumed a leading role in the war against Britain. He then affected President Madison's decision about the war, and more or less pushed Madison from being indifferent, to declaring war. Clay saw the British as an intrusive and unwanted force that was trampling on the feet and violating the rights of countrymen."

"The offenses committed against the United States by Britain were the major provocations for the war. Reasons other than vindication can be regarded as rationalization. There was an obvious anger for what the British had done to America, and many Americans merely wanted revenge."

Yep. When I was a kid, they said ONE mile.

Tell you what, you and I go out on the Bonneville salt flats with that box of .22 ammo, and I will let you fire it at any elevation or direction you choose, measuring the distance that the farthest round goes. I will pay you a dollar for every foot over 1 mile the bullet goes, and you pay me a dollar for every foot under 3 miles that the bullet goes.

"3 miles" is for the lawyers, and to impress potential buyers.

When I go to the ATM, I will always at LEAST have
pepper IN MY HAND if it's open and exposed, and
I 'move it up' onto it's clip for easy access if it's a
'restricted access' ATM or if someone follows me
in. If I happen to have something else, I always just
make extra sure it's ready. In a holster, clear the
sweater, they have no business looking at my belly
anyway, right? Or if I just happen to have the little
Walther in my pocket, I'll just make sure it's at the
BACK of my pocket, so it won't snag if I have to
get it out quick.

Hmm, if I show up and I'm about to follow someone
into the ATM lobby at the bank, I ALWAYS fall back
a bit, and NEVER try to catch the door. I want them
to see that I'm getting in with my OWN card. I just
hope that little bit of courtesy makes them feel a bit
more secure. If they delay and hold the door (some
do) I'll try to have my card out and visible in my hand
as I say "thanks"

If someone tries to 'catch the door' as I'm going in, it's
a gut call, but you can bet I'll be VERY aware of where
and how they are standing in the lobby.

By the way, in 23 years, I've NEVER pulled and fired.
Although in two situations I could have and had
justification. A third would have been debatable, but
I was 'unsure' of a peripheral action, and as a result,
elected in my mind to pull and hope the show of force
was sufficient. I gambled on the fact that it would stop
the situation that I was 90% sure was about to happen
behind me. If I had waited, and it developed to
completion, I would have had no choice to fire dead
on at two individuals. But it all worked out for the best,
the show of force, while not 'legally as defensible
diffused the situation with nothing but the one individual
screaming and I'm 99% sure peeing his pants as my
S&W stayed pointed dead center at him as I got
away. (Yes, "I" got away, I didn't pull the macho bull
shit of trying to chase him off. I used the force to
disrupt their actions to give me time to use an opening
and escape. MUCH better than having to deal with
lawyers and the courts!)

Just don't let him use any of the new ultra velocity
stuff. I've heard the new "Yellow Jackets" and that
pre-frangible 22 stuff is pretty hot, and well over
a mile and a half the old stuff would go.... It just
might make 2 miles or more out of a LONG barrel
rifle. Unlike standard velocity ammo which actually
can SLOW DOWN in some long barrels...

How about some long-range dreaming: At least seven private corporations are planning on sending packages to the moon (CNN news item). Just think if we could have them include some amateur gear with their launches. What obstacles would have to be overcome in order to have equipment that would work in the lunar environment?

If each of us kicked in ten bucks, would the nearly $7M generated be enough to fund such a project?

You have hit the nail on the head, Bob. It's just another tatic of Ruth Hoffman and her gang of thugs. They are not satisfied with KV4FZ being off the air, but now want us out of the way too. I have listened to you on 14.313, and not once gave out information that was not public.

This is not the first time AF2Y has been cited by the feds. In 1992, he has cited, but not fined by the Kingsville, TX FCC office. Then he got several letters from Hollingsworth. Then we have loser KC8JBO, who came out of nowhere 2 years ago and started all sorts of shit. We (The B.A.R.F and SJ's) got him removed from his AOL acct and got him in hot water with his employer, GMAC, for posting his hate while on thier clock. Not a smart thing, JBO. JBO then got several warning letters and a RETEST notice too. Now we have this "tough-black-dude-falstaff" who came out of nowhere and most incendtally, has a WV posting IP! If you will notice, the grammer and vulgarity are almost the same from that JBO. Then this Falstaff dude cliams he is an FBI agent. Time will tell on that story. Is this all Ruth Hoffman can hurl our way? A bunch of LOSERS!

Brian,

You're right, packing is a 'pain in the ass' 99% of the time.

But then...

When I worked in the hospital in Boston I packed 99% of the time, but mainly because of weird hours and bad neighborhoods.

But working as an engineer? The only time I'll pack is if I'm 'doing something' after work. I did some 'contract work' for the hospital in Boston, and if I had to make a run in after my 'regular' job, I'd pack since I'd be in Boston late night and might be walking around.

Just having the permit doesn't mean you HAVE to pack, it means you have the legal justification if you WISH to pack.

At one 'engineering' job I was asked by management if I was packing one day... Seemed they had 'let go' an individual and they were concerned. Just proved the adage is the shit goes down in the cafeteria, who do you want sitting next to you. Me (and packing) or Pete Shields. They evidently chose me. In fact, even though it was 'perceived' to be anti gun in some policies, I was told I had 'nothing to worry about' privately. But then, NO ONE knew when I did or didn't pack. And that's how it should be. Hmm, I was pulled out of my office one day to go on an 'errand' for one of the execs. Turned out the VP drug me to a gun shop for my 'recommendation on what another company officer should 'carry'. Came down to a couple of choices. But when he found out my 'carry' was a 3913-LS, that's what was bought... With the justification being that's what "I" carry, not on any recommendation I made...

Paying attention is probably more useful than packing a gun. Paying attention and using plain old common sense to avoid becoming a victim that is. For example, plan to visit an ATM only during daylight hours at a safe, busy, location. This will decrease your chances of being robbed to near zero. And if you're not robbed, then you can't be shot while you're playing Rambo with that guy who has that gun in your face...

The obstacles that would need to be overcome would include the power demands from that far a distance. I have always thought a 2 meter repeater on the moom would be a nice accomplishment.

<rest snipped>

By 1812 the Revolutionary War had been over for decades. No matter the
"cause", it was a new war.

When the British invaded during the War of 1812, they WERE a modern
military.

Look, I'm very pro gun. Trying to justify the position with an
obvious fallacy ("never been invaded") just makes pro gun people look
stupid.

Please provide information on ANY time when a victim was shot at an ATM when he or she went for a concealed weapon. I can provide several cases in which the robber was either driven off or shot, yet have not found one to fit your hypothesis.

This person violated no less than 8 gun laws (other than murder). The only thing that more laws will do is prevent law abiding citizens from defending themselves. More gun laws only inconvenience criminals and run up the price of bootleg guns.

BTW, haven't you noticed that the real nut-balls are so ashamed of their own beliefs that they can't even post with their name. This only goes to show how little backbone it takes to be a liberal.

Actually, there was a plan for doing this back in the sixties.

It was called Project Moonray, and the idea was to include an
amateur translator on one of the last trips to the moon.

I remember reading at least one article about the project in CQ, it
must have been in 1968 or 69 though I first read the article a
few years after the fact. I just did a quick search through my
old magazines, and can't find the article.

I was never sure how much of it was dreaming, and how much of it
was real. From memory of the article, they had worked out the details,
and it was do-able.

I just did a websearch, and there is a bit about the project here:
http://www.nitehawk.com/rasmit/nick.html

Among other things, it says the project was intended to go up with
Apollo 18, but the Apollo Project was cancelled before we got to
that number.

The websearch also turned up some hits a few years old indicating
there were plans to revive the project.

Someone with QST on CDROM might check the annual index from '68 and '69
to see if there's mention of Project Moonray. I did check my QSTs,
but not only are they not all in the same place or neatly ordered, but
I didn't bother checking the VHF column.

Well, just after I got the 3913-LS, I recommended
the gun to a friend who is a coroner, and had about
8 sworn officers working for him in an investigative
role. (Fairly good sized city.) He took my rantings
on how much I liked the thing, he bough one for each
of his officers for off-duty as a present.

This was one of the first Lady Smiths, so the ONLY
way to get the tapered frame and the SINGLE sided
safety was the LS model. (It was also the ONLY model
to come STOCK with the gray grips as opposed to the
black, which really show through a light summer Banlon
T shirt!)

Unfortunately one of the officers 'balked' a bit at it.
Seems he didn't like the laser-engraving 'LadySmith'.

So a short time later I happened to be talking to Roy
Jinks and he told me there were a few people that
requested the 'format' of the LadySmith but without
the engraving, so S&W was considering offering it as
the 3913-NS, which 'semi-officially' stood for Non-engraved
Smith as opposed to the 'LadySmith' designation. He
jokingly (or maybe not) told me it originally was going
to be offered as the MS, since M follows L, but then
someone decided that might stand for "Macho Smith"...

I agree that the 'invasion theory' isn't a very strong argument.
However, in modern times, it really WOULD be a MAJOR
consideration of a foreign power if they ever were to
contemplate such an act. But realistically, only one EVER
could have even planned it.

However, just for discussion... Consider just how far the
civil disobedience that we now cherish in retrospect for
making us a wiser and more responsive nation would have
gotten if the 'powers that be' at that time didn't have to
consider that at least SOME of the people in a protest
crowd might be armed?

Makes you wonder what that aspect of things might have
had to do with Kent State, where students are generally
assumed to be unarmed on a campus. (Which wasn't the
case at schools in PA at the time. I know!)

Dear QRM,

I've had some experience with observing the legal system in action, and I watched two felony trials from start to end as a spectator, and one more as a juror. My son-in-law is a supervisor/agent who runs anti-cocaine undercover DEA operations out of the D.C. Headquarters in Crystal City and my daughter is a DEA agent/analyst in charge of the Domestic Heroin Intelligence Unit in the same office. My son-in-law was part of a very successful drug-related murder task force with the D.C. police called "Project REDRUM", and I've heard a lot of anecdotal tales concerning the outcome of these and other felony cases. In addition to this, I've had frequent interactions with various COs, judges and officers of the court who are members of my country club - and they tell many interesting stories about how the system really works.

By the way, I do like both "Law and Order" series shows...

Some will die from guns, some from aids, some from drugs, some from too much chocolate, some from inadequate shelter, some from just being too damn old and feeble to go on. Deal with it.

And take your huffy gun control rants to alt.phuck.the.NRA newsgroup. This one is about amateur radio.

Thanks,

Hans

Another one that doesn't jibe with history. Start with, say, the Whiskey
Rebellion and work your way up to the last LA riots and see what you
get. Be sure to look at the little protest by WWI vets between the wars.

Robbers tend to be extremely nervous, judging by many victim's
reports. Some said that they were afraid of being shot accidentally
because the gun was shaking so badly. If that weapon is in your face
it would be very unwise to make any sudden moves...

>When you offer a quick defense, they have lost before they
>get over their shock.

Many of the dead convenience store clerks here offered a quick
defense, even though their store's policy was to offer no resistance.
Why do you suppose the store would have such a policy?

Actually I can't remember an ATM shooting here. But then I didn't
bring up the ATM example. However the logic is still valid. It's not
wise to play quick draw with a guy who has the drop on you. Only in
those bad old western movies do the guys in the white hats always
prevail...

Anyone know anything of this microphone?

I use it and it sounds great, funny thing is, it just has an insert and no amplification involved within the microphone. If anyone knows any info on this mic, would be appreciated.

Tnaks in advance

>
> How do environmental factors affect "the very existence of high
> capacity efficient plants"?

No, no,...read again. All of the above in addition to
environmental factors, are responsible. But environmental interests
have shut down or prevented the start up of properly operating and
properly certified power plants because of thermal effluents into
streams and rivers. No radiation, particulate or chemical pollution,
but a single degree of temperature. Such it was at Dresden here in
Illinois. Environmental interests have prevailed on both the
President and the Congress for protections of large areas where
drillable oil exists and is plentiful. Alaska, as we've mentioned,
off the shore of California. There is so much oil in the Caribbean
that it is seeping onto the floor of the Gulf...but it is illegal

for American interests to harvest it. (not so illegal for other countries to drill, however...)

Coal has been the spawn of Satan for decades, and yet, we have plentiful coal, much of it, that we are enjoined from harvesting.

When fuels are placed out of reach, high capacity generation is challenged. Diversity of generation techniques would make capacity an non issue. But we're being way too shortsighted.

Further, the argument: 'How many Exxon Valdez' do we accept before....'

That's also a non issue. Of the billions of gallons shipped, we focus on one accident. A big one, to be sure, but only one. There were spills before and there were spills after, but we focus on that one, with a horrid and distortedly shrill outcry against all shipping for fear of repeating it. This is Alarmism. It serves no one's interests to permit these spills. Not the environmentalists, certainly not the shipping company, certainly not the oil industry. And with each 'incident' even the minor ones, things changed with the intent of prevention. The number of 'incidents' have gone down since. The number of barrels spilled have gone down.
Do we want another Exxon Valdez? Of course not. Silly question. But we don't change our lifestyle because of it. We don't stop progress, if that's what you want to call it, we don't stop building cars and power plants, and we don't stop shipping oil. We change the way we do it. We do it better. But we continue to do it.

Do we want huge coal smoke belching power plants next to our country clubs? Another silly question. We build them cleaner. We build them more efficient. We build in the huge capacity reserves to cover the unexpected. To cover growth. And we find a way to do it while still living in harmony with nature. It's not impossible. But it does take effort, and it does take cooperation on both sides. And it takes PLANNING.

There was a statement here that the free market has been responsible for the lack of emergency capacity. That's not always true. It's often the public regulators who have turned thumbs down on new generating capacity. And they've done it under the guise of 'consumer protection.' I'm still trying to figure out which consumers they're protecting here.
>
> The "who bells the cat" question is - "who does the planning"?

That's a good question. When Chicago was being built, Daniel Burnham drew huge plans for teh downtown, and the lakefront. "Make no small plans," he said. He was one visionary. He was also fought tooth and nail by the city fathers.

One of the problems we have these days is an inate distrust of businessmen. And with very good reason. And they have an inate

distrust of the public, and the government. Again with very good
reason. And this conflict gives rise to the combative relationship
between forces that recognize the need and those that expect
regulation to meet it.
Who should do the planning? Perhaps it's too early to ask that
question. Perhaps a more appropriate question is how do we get the
parties involved to recognize that there IS A NEED for planning.
Once that's recognized, the actual planning becomes a rather small
affair, because the parties recognize benefits each to themselves
from executing a well thought out plan.

The process is going to ahve to start with education. Educating
the public about the need for planning and the reason for the
struggles as they exist, and education in teh schools so that the
notion of planning as a means to a smooth and exciting future is
well established by the time comes for these individuals to take
their place in the planning effort.

> tax structure isn't that different.

No, the exact cause was the new EPA rules mandating 'reformulated'
fuels in Chicago, Milwaukee and Rockford. The rules didn't allow for
production delays as the reformulated fuel was created, or the huge
need for refining capacity to produce it. Fuels which could easily
be diverted from, say St Louis, in the event of shortage in Chicago,
were now illegal to sell in Chicago according to the new EPA rules.
Prices shot up accordingly.

The cost of the fuel. I've gone from 25cents a gallon to $2.50 a
gallon.
>
> Also, how much it takes to fill up is not a good indicator. How often

I filled up as often now as I did then. Once maybe twice a week.
Just like I did then. Same tank. Hell, it's the same car. :)

While this is a true statement, it's incomplete. The goals of
regulation and market forces are the same. The difference may be the
mechanics, but the results are often the same. Planners not driven
by Market Forces are as short sighted, and often influenced by many
more forces than Market types.

> who opposed lead in gasoline used to be called all sorts of names.

Primarily because of the way they executed their claims. Alarmism,
distortion and a 'sudden death' attitude toward phasing it in all
contributed to the vitriol. What also didn't help, was that auto
manufacturers had recognized as long ago as the 30's that lead based
antiknock compounds permitted them lower cost in their castings of
heads and blocks by permitting a softer iron than others which were
NOT limited to leaded fuels. AMC and Studebaker were both using more
nickel in their castings so blocks and heads were sufficiently hard,
that extra cost valve seats were unnecessary, and the problems of
valve recession experience with Fords, Chevy's and Chryslers using
unleaded fuels didn't materialize.
I always used unleaded fuel where I could find it...Long before
1975. My car simply ran better on it. When lead disappeared from
fuel, my Hawk didn't miss a beat. Although my father's Ford had no
end of problems, all related to unleaded fuels.

A more gradual phase in, and better planning by the Auto Industry
would have prevented the vitriol against No Lead advocates. Again,
poor planning.
>
> I could be mistaken, but it's my understanding that what really killed
> leaded fuel was the catalytic converter.

Leaded fuel destroys catalytic converters. But then so does an
engine out of tune.

No. As I pointed out earlier, there is plentiful oil in Alaska,
and off shore. It has been made illegal to harvest it.

That's one example. But offshore, or Alaskan deposits aren't as
expensive to recover. But they've been made illegal to harvest.

When you're paying the kind of money that it costs to drive around
here, there's nothing sexy about it. :)

> VW diesels do even better, and are bigger and better performing than
> the old ones.

My wife had a diesel Rabbit when I was married. 50 mpg was not
uncommon. However it requires more crude to produce a gallon of
diesel than it does gasoline. Mile for mile the amount of petroleum
expended comes down to be about the same. Diesels in passenger cars
are not going to produce the fuel savings that we'd like to see.
Further, the newer EPA regulations effective for diesels reduce
efficiency and increase consumption.
>
> > The number of Navigators and Excursions don't account for a huge
> > amount of fuel spent, over the amount of fuel consumed if those
> > drivers were in Jeeps.
>
> You have mentioned only large, luxury, inefficient vehicles. How about
> what most of us drive?

I've mentioned the extremes to accentuate the disparity between
perception and reality. If the guy driving that Navigator was
driving an Interpid, the saved fuel wouldn't be that great. And
we're all mostly driving cars that get about teh same mileage as an
Intrepid. My Hawk, my Caravan. Your Saturn, your Honda...all the
same ball park. And the bulk of SUV's driven don't consume more than
the average.

> > The SUV is not the problem.
>
> When it is used as a single-person long-distance commuting vehicle, it
> it's a big part of the problem.

But that's true if that same person were driving a Jeep. The
difference between that person driving a Navigator, and that person
driving a Jeep is going to be the same as the savings as the next
person driving a Tracker. The net difference is zero.

Which is their right. As soon as you start penalizing people for
the size of their house, and car, you start down a road that is as
short sighted as taking producing oil fields off stream.

> > The Exxon Valdez mess had a lot less impact than we were lead to
> > believe.
>
> And much more than Exxon wanted us to believe.

Without a doubt. But the alarmism stems from the assertions of
disastrous, cataclysmic destruction of the coast. Which didn't
happen. Ignoring Exxon, (as you would any division of organized
crime) the facts themselves speak handsomely to the truth.

And, as previously discussed, the interests are served on both
sides in seeing that this doesn't happen again, and steps have been
taken. As evidenced by teh reduction in such incidents over the
ensuing years. Just because Exxon screwed the pooch, doesn't mean we
stop shipping oil. It just means that we put systems in place to
forestall such an incident again.

Titanic was as criminally negligent a disaster as was Exxon
Valdez. We didn't stop shipping. (how would you like to be in teh
PR department of Harland and Wolff? One little shipwreck and that's
all you hear about for 100 years. And have you heard? Harland and
Wolff has built a Titanic Theme park they yards in Belfast where the
Olympic class was built. Now how's THAT for sick.)
>

You do know that there have been experiments with hydrogen for
decades. In cars, in natural gas pipelines, (I believe that was in
Texas in the 60's) and it was outlawed. I think we know who was
behind that.

But it worked. AND it's replaceable. In quantity.

Again, there is plenty of easy US oil. But it's been made illegal
to harvest.

>I've had some experience with observing the legal system in action,

QRM responds: It's now clear where you are getting your "lock 'em up and throw away the key" mentality.

My experience is on the other end of the system, where there is considerable success in getting someone back into society and keeping them clean for ten+ years.

It's interesting to me that when a car breaks down or a lawn mower won't start, fellows crowd around trying to help. "Try this," they say. But when a person breaks, society simply wants to throw them away. What's wrong with this picture?

You and I never will agree because you're looking at a different end of the pipe. You (and all those impressive folks you mentioned) feel that people like me are "soft" on criminals. Far from it. Many in my group have been crime victims. We want offenders caught and punished. But we don't stop there. That's where you and I differ.

Dear Donnie,
The time where a citizen could form small militias and oppose a
government military force ended probably after the civil war.
We support a trained non-civilian military to in part defend common
territorial interests.
The only need a citizen would have for a gun would be target practice
and small game hunting.
If weapons of the types used in Boston massacre were better tracked
and controlled, the incident probably would NOT have resulted in seven
deaths. But, that said, we always will have criminals and nut cases.
What to do about these people is debatable, but cops feel by inforcing
minor crime laws and getting many of these types off the streets, murder
goes down. Its also estimated, although I by no means immediately agree,
free abortions have kept murders lower since its taken out a lot of the
unwanted rift-raft that would have otherwise hit the streets.

I sentence you to a one-year subscription of Guideposts, Jeff. You'll find instances where parents or grandparents have forgiven the murderer of a child.

I'm so glad God's forgiveness doesn't work on your principle--that any victim(s) first must be made whole. We'd all be in deep Doo-Doo for eternity.

That's right Burt, lets get them elephant guns and kill us a few big
DXers. Lets start with that carzy dude in Montana that has them 200 foot
rotatable towers. A little nitro.. fix him good.
By God, we could cross the country maybe in six weeks and have all them
big guns in the ground with their tower tops buried with em. Lets see
how much DX they work with them towers six feet under. He ehee.

But then, if we are going to rely on movies for our references, forget pistols -- I'll just drop a house on the bad guy, or maybe even a meteor. Or maybe I'll wave my hand and 25 Marines will spring up out of holes in the ground all around him, then we will fly away on helicopters.

In the REAL world, however, an armed intended victim is most likely to win in any confrontation and come away uninjured.

Donnie wrote:
>
> Our Military is spread as thin as it
> could be i.e. Balkans, Haiti, Somolia,
> The worlds guarddog.

Our military is spread thin because it decided to spread itself thin. To justify the huge military budgets, the military has spread into areas where we have no political, economic, or social, interests. In the last ten years alone, the military has opened, or expanded, 37 military facilities in africa and the middle east. The Navy is routinely patrolling waters that were almost never patrolled ten years ago (indian ocean, south pacific, etc). Some of this expansion is being urged by the civilian leadership, but much of it is the military itself.

At the same time, the military has embarked on the largest hardware modernization in the history of this country (new tanks replacing old, new ships replacing old, new computers, new satellites, new command and control technologies, etc).

Much of this modernization is being done at the expense of the soldier, as money for health, welfare, and support, is being siphoned off to finance equipment costs. For example, at the same time the military was expanding bases in africa, the military closed 65% of its medical facilities world-wide, and some medical care that was once free now requires payment. And, of course, we're all aware of the military base closures, which were asked for by the military (not forced on the military by the civilian leadership).

And, the costs of the new hardware is staggering. For example, lets look at the humvee that replaced the jeep. If we would have purchased new, modern, jeeps instead of the humvee, we could have saved enough money to double the salary of every soldier in the military, and finance that pay raise for five years. And the performance of the humvee is not that much better than the jeep. While the humvee slightly outperforms the jeep off-road, its on-the-highway performance is dismal (as anyone who has drove one through the narrow city streets of an overseas city will tell you - ackward and ungainly are words that come to mind).

Conrad and Dwight,
The military is in it's present state because of the leadership
it currently has.
retention rate is at a all time low, are best fighter pilots are
flying for fed-ex or ups.
Our ground forces here in the U.S. are engaged in organized crime
at military installations in the midwest.
Are troops are being ordered not to engage the enemy even when danger
slips right up and blows a 40x40 hole in the side of a U.S. ship.
The goverment forced base closings, I should know I lost a job with
13 years service supporting the fleet. It was a political closing
Who's to blame?
Guns dont kill people, Criminals kill people.
I bet if you took a poll, you would find most armed citizens have a
weapon for security reasons.not a weapon of mass destruction.
I own (2) handguns and a rifle, oh and a B.B. gun.
all are locked in a gun safe out in the garage away from my
children and the criminal element.
Should all hell break lose, I'll be ready,
If I give up my weapons, (NOT)
I guess I'll load up my Bass Boat,my B.B. gun and a butter knife and
rescue the world.
Donnie

You mean "YOU" whined and bitched and moaned, then made forgeries to
get AOL to close my account. Then explain how I was able to post from
that same account just a few weeks ago.

>and got him in hot water with his employer, GMAC, for posting his
hate while on thier

You mean "their".....IDIOT.

> clock.
>Not a smart thing, JBO.

In the first place, I NEVER worked for GMAC, you fucking DUMBASS. A
quick perusal of the Wheeling telephone directory shows that there is
NO GMAC office in Wheeling, so YOU have just been caught in one of
several LIES, Profit NUTSACK.

> JBO then got several warning letters and a RETEST notice too.

One warning letter, and One retest letter. One general letter to your moronic buddy N8WGM, who knows better than to come around my Glen Dale home again. The Glen Dale police will have a chat with him if he does.
To quote LRod:
Exhibit 1 > Letter of 9 Nov 1999 0letters/wisemanwarn.html
Exhibit 2 > Retest letter of 11 Jul 2000 0letters/wisemanretest.htm
Exhibit 3 > Repeat of 11 Jul 2000 letter enforcement_logs/2000/0719
Exhibit 4 > Joint letter of 29 Mar 2000 enforcement_logs/2000/0410.html
Exhibit 5 > Joint letter of 29 Mar 2000 enforcement_logs/2000/0503.html
Exhibit 6 > Letter of 9 Nov 1999 enforcement_logs/1999/1119.html

So let me see if I have this straight. You're presenting six exhibits that purport to prove someone as guilty of some offense. Six exhibits apparently being your idea of overwhelming evidence.

Let's examine your work:

Exhibits One and Six are clearly the same information.
Exhibits Four and Five are clearly the same information.
Exhibits Two and Three are clearly the same information.

Your "overwhelming evidence" is shrunk by half.

Exhibits Two and Three are evidence of a request for re-test. What is that proof of?

Exhibits Four and Five address off-air circumstances and are merely pre-emptive reminders not to do something that hasn't been done yet. That's not proof of anything to do with radio.

Exhibits One and Six "may" indicate an impermissible activity ocurred, but by its nature is neither proof of the activity, nor guarantee of the validity of the evidence, if any.

So, just for the sake of argument, let's presume that Exhibit One (or Six; they're the same) was some sort of indicator of wrongdoing. That "fact" is just 16% of what you purported to be overwhelming evidence of something.

Of course, we can presume with equal validity that Exhibit One (or Six) was based on bad information and was therefore improperly presented. Then your "overwhelming evidence" has slipped to zero. Nada. Zilch. Nothing. Zippo.

So what was your purpose here? Just to tell another lie? Trouble is, Llloyd , you are all in a lather thinking something's happening and you don't have the mental horsepower to figure out what hooey it all is.

> Now we have this "tough-black-dude-falstaff" who came out of nowhere and
> most incendtally, has a WV posting IP! If you will notice, the grammer

"Grammar," you GED recipient.

If you have the training, the physical advantage, and the element
of surprise on your side, disarming the perp can save your life.
Saving my life sounds fairly wise to me. It just depends on the
situation. One needs to understand and trust the probabilities.

Have you ever taken a self defense course? You seem to be
totally ignorant about human response time. The worst mistake
a perp can make is to allow his gun within reach of the victim.

> Many of the dead convenience store clerks here offered a quick
> defense ...

Many of the dead convenience store clerks offered no defense.
There's a probability you'll be dead either way - sometimes less
likely if you catch the perp off guard. With training, one can
judge the probabilities accurately.

Most con games, frauds, superstitions and religions (same word in New Testament Greek), etc. depend on the inability of the human race to estimate and act on probabilities. Even Einstein, faced with quantum concepts, simply replied that God does not throw dice.

Concealed carry honestly scared the living bejeebies out of me, mostly because of the advocates I knew. As it has happened there are very solid numbers that pretty well nail down that it works. As facts do not seem to have changed the argument a whole hell of a lot, one can only conclude, Cecil, that the number of people willing to understand and act on probabilities is pretty damn small.

The liberals have tried to program our citizens into a nation of sheep.
That is advantageous for socialists and criminals. People who fight
back do not make good socialists or good victims. Me, I would lots
rather die defending my rights in a shootout with a bad guy than die
in a hospital bed. Life is a trip whose destination is known. One best
enjoy the trip.

They had worked out the problems. It was do-able if you had the huge resources necessary to build such a thing in a short time. But it never got very far because the demands were and are so great. It was not do-able by self-funded volunteers at that time.

>I didn't bother checking the VHF column.
>
There was never any mention in QST. The whole idea never got past the talking stage, as far as I know. Here's why:

1) The package has to withstand the extremes of the lunar environment
2) Sunlight is only available 2 weeks out of 4

3) The size and weight were extremely limited
4) It had to be set up by astronauts wearing the heavy inflexible suits of the time
5) It had to pass all of the safety and functionality tests NASA required to go on a manned mission. And it had to pass them long before the actual mission.
6) Path loss to Earth and low power of the translator meant Earth stations needed some serious antennas and equipment.
7) The whole thing had to be done and ready in just a few years, using only volunteer funds and materials. Most of the professionals doing that sort of thing in the late '60s were fully booked and couldn't help much.

>corporations are planning on sending packages to the moon
>(CNN news item). Just think if we could have them include
>some amateur gear with their launches. What obstacles would
>have to be overcome in order to have equipment that would
>work in the lunar environment?

Here are the big ones:

1) Two weeks of cold (200 below and worse) and dark followed by two weeks of heat (200 above and worse) and light. Much worse than a space environment.

2) 250,000 miles from Earth, compared to less than a tenth of that for geosynchronous orbit. Round trip path loss at least 26 dB more (probably a lot more) than geosynchronous.

3) Package has to be small and rugged, and has to be set up to be pointing at the Earth if any sort of directional antenna is used.

4) Somebody has to get it there, which is much more complex than getting to orbit.

There was a thread in rrap about "ham repeater on the moon" a while back. The problems are enormous and the results disappointing compared to geosynchronous or near-geosynchronous orbit.
>

I am a 'liberal' in the sense that I trust people to do their thing pretty
well without me -- the meaning it has in most of the rest of the world:
non-religious conservative. If 6000 years of human history proves
anything it is that after nature itself, a man's twin enemies are his own
government and his own church long may they be separate. There are indeed
worse things that can happen than dropping dead.

The great American contradiction is the faith often put in government and
laws to do things that can't be done coupled with our fear that they may
actually get it done. Whether it is 'I would live forever if
_____ (insert 'no one smoked', 'had a gun', 'got rid of nukes'
etc ad nauseum) or ('believed in God, went to church, read the ten (of 11
or 12) commandments, banned abortion') it is sheer idiocy none the less.

Never ascribe to conspiracy what can be adequately explained by stupidity.

One would take a look at Profit Nutsack Davies' "tiny antenna" and
laugh. She would
say she'd rather have a dildoe than try it with him. So Llloyd has to
go gay.

> FWIW, can you imagine
> Lloyd "gettin' jiggy" to "E.I." by "Nelly?" Nahh, neither could I!
LOL

It would be "Dancing with Whales." LLLloyd does that monkey love thing
with little boys.

There was, in the late 1950s or early 1960s I believe, a
professional communications device called an "Echoplex," which
separated the audio spectrum into several frequency slices, applied
a different time delay to each slice, and then reassembled the
slices by adding the converse of the original delay difference to
each on the receiving end.

I never used one, but the advertisements claimed a sort of light
security against casual monitoring, and also an average power
advantage and a time diversity advantage over noise bursts.

It is possible that something similar -- or even the same gear -- is
still being used somewhere today.

With all good wishes,

--

Kevin Alfred Strom.

Hmmmmmm. Kinda reminds me of the ol' CB days, just like 2 meters does today.

The 90th episode of
The Adventures of Scanner Dweeb comic strip
titled " Branching out "
is ready for your viewing pleasure at
http://www.ScannerDweeb.com
And thanks for your support of the hobby of radio !

The Adventures of Scanner Dweeb comic strip
http://www.ScannerDweeb.com
http://scannerdweeb.netfirms.com
http://www.ScanShack.com
Special monthly episodes, not shown
on the web site, can ONLY be seen
in Popular Communications magazine !

You actually fell for that line did you? Let me ask you one very
simple question....how does a phone patch net corrupt the 20 meter band?

I can't wait to here this response.

If you really believe that, sir, then go live in Cuba. Then write me a letter after 6 months about how there is no difference.

Freedoms have been losing ground steadily in America since the end of Reconstruction after the Civil War, but it is still a hell of a lot better than anywhere else. If not, then tell me where you think it is better, and lets see if its true.

He doesn't. No one knows exactly how any crime will go, even the perp.
One thing we do know is the tendency to leave no witnesses has grown
over the years.
Meekly complying with the robber guarantees nothing whatever. Some
Get'n Go employees have been fired after foiling holdups due to company
policy which requires them to do nothing to resist. Some just can't
resist the natural urge.

Good Lord, I guess I need to be more careful with the English language. Can you not read a message with out reading into it such limitations as "ONLY", "NEVER" etc. Of course their are other reasons, but please remember the likes of Tom Hayden spouting "Better brownouts than people outs" and other such nonsense from the left. Had they planned as they should have the tree huggers would have been less of a mitigating factor. The tree huggers were fond of putting obstacles in the planners paths... Catch 22

Contrary to the misinformation by some on here <below>, the USAF
employed no echo in their
transmissions. How would I know, I was in the USAF. What you are
hearing is the long-path propagation of the same radio signal bouncing
off the ionosphere. As the signal was transmitted to various locations
of the USAF Global High Frequency System, (I knew it as the USAF Global
Command and Control System and the SAC Giant Talk system) they were in
turn propagated around the earth and the echo is the result of that
travel. It is entirely unplanned. It's too bad some don't research or
know what they are talking about *before* they express their "opinions."

You used to hear a similar echo even tuning between AM stations that were carrying the same network feeds. I seem to recall that it was WWL/WCBS that I could easily hear the echo cuz they both had similar strength at my location. That difference was certainly attributable to the difference in delay on their network feed circuits since the stations were equidistant for me in NC.
One type of echo, which has never been totally explained, is the 7-second echo. A Prof. O. Villard? at Stanford did alot of investigation of this phenonomena. I heard one of these once, and corresponded with him regarding the occurence. Has anyone else ever experienced this?

And if you want an argument you will have to change the subject. I only wish I could find a weapon with the characteristics I have seen put forth the last few days. Kills at 1 mile after passing directly through trees and creating exit wounds the size of a baseball etc etc with a 7.62X39. My darn bullets won't pass through a 3" diameter tree let alone reach the super feats of the fabled rounds. I guess these dramatic changes are imparted to the interior and exterior ballistics by the dreaded "assault rifle".

Dwight,

Per your comments vis a vis Jeep/Humvee, I have to say I always wondered why the military opted for what seems to be a cumbersome and overly large (also read expensive) vehicle. I never drove a Humvee, but I have quite a bit of experience with the M38A1 thru M151A1. Now, I cannot xpertly compare the two, but it seems to me that the Jeep would be more maneuverable in wooded, hilly areas whereas the Humvee *might* be better in open, sandy places. My experience with Jeeps is that they are a little "sticky" in deep sand or extreme mud, and the success of the vehicle's operations has as much to do with the operator as the Jeep. After gaining experience with the Jeeps, I learned how to judge the area I was traversing and make adjustments to prevent getting hung up or mired down. The trouble with the early M151s was their tendency to flip or roll over even from just hitting a bump in the road. The suspension theory promulgated by DoD was to allow the wheels to reach down into almost any hole and provide traction. You could jack one up by the frame and the rear wheels would fold under until they almost touched treads! Ford Motor Company TOLD DoD that this design was dangerous. After a number of deaths, the suspension was modified to prevent "tuck under" and provide a solid limit to the system's downward travel. Even this was not completely successful.

I don't know all the reasons for the abandonment of the Jeep in favor of the Humvee, but it seems to me that the modern Chrysler-built Jeep could serve many functions such as rapid movement, gun platforms, towing, maneuvering in tight areas, and less cost. I can see where the Humvee would have certain advantages in its own right, but, certainly, now there are many functions where this large truck's use is clearly wasteful. Lots of practical uses could be made of the modern Jeep without much modification.

I do have a fondness of the old M-series Jeeps as they had a certain "personality". You could never mistake that old Hurricane four-banger!

Looking for someone that has a copy of a Heathkit GC-1107 Electronic Clock Assembly Manual. I have a brand new GC-1107 kit, but it is missing the assembly manual.

Please send responses to my email account.

Thank you for your help,

Rodger

The risk is always daunting in those circumstances. Most can't decide
to act at the right time, or what the right time IS, or delay until
there is no opportunity.
Agreed, the prospect of large numbers of ordinary people carrying
concealed weapons gives one a bit of pause, when you consider what is
actually involved.
We don't have concealed carry, it was defeated last year by the same
inner city community that keeps Jesse Jackson and Al Sharpton in the
chips as millonaires, and which is well known for their own propensity
to illegally carry and use whatever they want whenever the opportunity
strikes. Seems they didn't want their intended victims to be able to
respond in kind!

I wouldn't carry one around all the time anyway, it's just too much
fulltime responsibility for the level of need involved. One can't ignore
the serious ongoing level of that responsibility and under most
circumstances for me it would preclude carrying. Any right to carry law
should insist on proper training and discharge of personal

responsibility.
But to be legal to arm oneself on certain circumstances and occasions such as crosscountry travel, expecially at night, into certain questionable areas of cities, etc. would be very attractive. I believe that's the way most people would want to use their carry permits. That surely is a right just as much as any other. You don't see cases being filed against people who don't have a legal carry permit when they use a firearm in defense of themselves or their families. That fact extablishes some legal precedent for a reasonable right.

I've had one since 1972 or so. First used it on an ol' NCX-500 --
then on my TS-520. It's now on my IC-551. I have *always* gotten
Very Nice compliments on the audio quality.

I have a second one (that came from my father's estate) on my IC-251.
That rig requires a pre-amp in the mic., so I built a wee one in
the base of the Shure and it works FB.

I don't know what you mean by "...it just has an insert...".
There were 'power mic' versions made -- maybe a different model
number was used. I think those first showed up back when a
Power Mic was *the thing* to have with CB'ers -- so you could
hear the wife in the kitchen at the other end of the trailer.

Unfortunately, Somalia is ruled by gangs and local warlords. The US is
ruled by the LAW. We have a Constitution which supercedes even the
President, Congress and the SCOTUS (whether the liberal socialists like
it or not).

No, we won that one, but we were invaded.

The only ones we've lost I can think of off hand are the three attempts
to invade Canada and Viet Nam. Not counting draws like Korea of course.

How to go about liberal hunting. They're nearly extinct, but if you turn over enough rocks you eventually find one.

Step 1: Go into a green pasture with plenty of grass and field stone.

Step 2: Load weapon with logic and rational reasoning. Check that safety is on.

Step 3: Check that safety is on. Repeat step 3 until sure safety is on.

Step 4: Let out the liberal call: "Conservatives are right wing religious nut cases."

Step 5: Wait patiently for one to come up from the "grass" and exhale saying something like, "Nationalize all industry."

Step 6: Turn safety off, fire weapon. Turn safety on.

Step 7: Check that safety is on. Repeat step 7 as much as necessary to MAKE SURE safety is on.

Step 8: Track wounded liberal by listening for whimpering phrases like, "Socialized medicine." Or the infamous "Gun control."

Step 9: Offer free subscription to the Limbaugh Letter to whimpering liberal.

Al, ya can't have a court say there is 13 eggs in a dozen... It still wouldn't change it.

Well folks, I'm happy to say that the light at the end of the tunnel has shown itself to the Clinton/Gore administration. And thank god, it's a freight train.

It'll be nice to kill some more spotted owls and make some power plants now that GW is in... Liberals... Interesting animals. Quite the reactionary critters, not much for logic and reason... Don't build the power plant , but please keep my air conditioner and my CD Player going... Ok... BTW, did you ever notice that the guy driving the car w/ the cloud of oil smoke coming out of the tailpipe is the environmentalist... Yeah, you got it... When he stops you can see the faded greenpeace sticker on the trunk lid. Yeah, that guy.... The same one who cuts the 6 pack rings so geese don't get caught in them. It's the same guy who tosses his sandwich wrapper out his car window. Yep, same guy... Say one thing, do entirely another. That guy. Votes for Gore because he's afraid of what GW will do... Yep, that guy. The one motivated by fear instead of logic and reason... Yep... Same guy....

4210. Need help identifying a diode

Newsgroup: rec.radio.amateur.misc
Date: 2000-12-29 22:02:56 UTC
From: wacoradiodoc@aol.com
Message-ID: <20001229170256.21288.00007235@ng-fd1.aol.com>
Source record: 96728

I'm working on a handheld radio that has a shorted diode which I wish to replace. The diode is a surface mount device with J-bend ends. Approximate dimensions are 5mm long by 2mm wide and about 2mm high. The top of the diode is marked with the letters "RA" over "CS". I do not have a service manual on this radio and I do not know if one is available at this point. If someone can point me to some resources to determine a suitable replacement for this diode, I would appreciate it greatly. Thank you.

I said "There is nothing attractive about having equipment on the moon.".
That does not state anything about orbiting satellites, those are a
completely different animal.

People suggesting it would be neat to have something on the moon usuallY
(always?) have not realized the problems associated with getting something
there, keeping it working, and then doing something useful with it.

You can have a repeater on the bottom of the atlantic. But that does not
mean it is an attractive thing to have.

Yeah, ok pal... Sounds good... Thank god I got my space alien deterrent strips hanging from my rafters. And good thing too, otherwise there'd be more cattle mutilations than usual. And boy am I glad that I don't drink milk anymore... Since I subscribed to bad living magazine I'm afraid to go outside because of the harmfull UV rays that the sun emits. And since I started playing non competitive sports we have one more man on the field. I mean, who needs people on bases if ya don't bother to keep score right?

I also got rid of my SUV because I feel it gives me an unfair advantage in comparison to other drivers. But thank god I don't need to take my son to soccer practice in the yugo anymore. He was the goalie, but then I bought their coach a subscription to bad living magazine and he cut him because there is no sense in having a goalie.

Did you know that peanut butter has salt in it? So I don't eat it anymore. I eat my whole wheat organic bread with a cup of thoroughly filtered de-chlorinated water each day. And those damn termites keep eating my house, but I can't use pesticides because it could enlarge the hole in the ozone layer that the evil space aliens created. I still don't understand the details of the war going on between the aliens and the penguins, but the psychic readers nutwork assures me that a portion of my time on the phone with them goes to send sunscreen to the worst sunburned penguins.

And did you happen to read this months article on how second hand smoke causes the earth to plumit towards the sun!

I gotta say, since I started reading bad living magazine I've never been more afraid in my life!

I just purchased a handheld transceiver to use as an emergency backup to my cessna radio when I fly. Do I have to be FCC license to operate a handheld transceiver in receive mode only on the ground for my own personal enjoyment away from the airplane? Are there any rules or regs about
bringing a transceiver to the airport to listen to before my flight? I am pretty sure I can't listen to it once they've closed the aircraft door.

Thanks

In "receive mode only": Use of receivers does not require a license.

Transmitting requires a license. You may need a license if you transmit to
other aircraft while not operating your own. I'm not up on the aircraft regs.

4217. Re: Seven people die because of no gun control

I've carried for 23 years.

If someone were to 'rob' me or otherwise accost me,
even if I were carrying, I would comply. THAT is
not the issue.

HOWEVER, it is my RIGHT to resist, IF I SO CHOOSE,
and even a law isn't going to change that.

MOST of the time it is to my advantage to comply with
a mugger. But if I feel that it is not, THEN I will resist,
and I will resist with any and all means at my disposal.
And the safety and/or well being of the person who has
accosted me with threats of bodily harm and/or loss of
life matters not one whit to my consideration of my safety.

If it is a situation with my family, then I may draw the line
where I choose to resist at a different area, but I WILL
draw that line, and as long as the situation stays on the
entry side, the mugger or robber or whatever can have
his way, and I will comply. But if it crosses that line...

In fact, if I were in a restaurant and the place 'went down',
I don't even envision myself stepping to someone else's
defense. Sorry. This is the real world, not a Rambo
movie. Me and my family is my concern. Besides, if
I WERE to step to someone else's defense, then I might
even be liable, and I could make the situation worse for
others. But I'll be damned if I will temper my actions
one bit when it comes to me and my family.

Do I give a rats ass of consideration for the 'bad guy'?
Give me a F..... break. Once they cross that line, they
are no longer a concern to me, at all, other than to
use any and all means to make the situation 'stop' with
regard to a threat to me or my family, or someone I care
about.

Now, could I realistically expect to 'surprise' them?
Honest answer, kind of hard, at least the way I'd want
to be able to. And always to consider is how bad my
actions would be. At one point I shot about 30,000
rounds of 9mm in IPSC competitions. And I won.
Won enough to pay for the shooting, but not
that much more. But even then I'd screw up in contest

and miss or otherwise make mistakes. And paper target
and steel disk don't shoot back. So anyone who tells
me they practice and can 'handle the situation' I consider
bullshit. BUT, I will agree that they have the RIGHT to
try when they feel threatened past their 'line'.

Mike

>There is nothing attractive about having equipment on the moon.

One attraction is that the moon is visible for a minimum of 20 days
per month; amateur gear up there could provide consistant communications
for 2/3 of each month (or until the batteries ran down during the
periods when the moon is in the Earth's shadow).

>(this has been beaten to death before, try checking some archive services)

Maybe so, but now we have at least seven private corporations that
are showing an interest in sending packages to the moon; we've never
had that before -- that solves a huge logistics problem.

A receive only license is not necessary in the US. Most airlines require
your radio to be off during takeoff and landing approaches. In flight use,
in the receive only mode, is normally permissible. If in doubt, ask the
Captain as you board the aircraft.

You may receive at the airport with no problems. As the aircraft license
would not include your radio, transmission is not permitted.

They like it. They undermine the Constitution daily. Their warlords serve as legislators and judges, sworn to defend and protect the Constitution. They've probably never read the Constitution.

I've never shot a Python, but my pocket .357 might do 12 in. at 50 yds.
My CSA .44 cap and ball will do lots better.

I want to try a P90 variant or a CZ. Kicking and screaming, I'm finally
ready to go beyond the revolver. OBTW, screw the 10 round magazines.

Its got a very base driven hump sound which i like. Is that how yours
sounds?

Its been a very good microphone and never missed a beat. Does Shure still
make microphones in this range? I know they make studio microphones.

Regards,

Ezat

Convenience store robberies are a nightly occurrence here. In all but a few of the cases each year the clerk hands over 50 bucks or so and the perp leaves. End of story. No one hurt and no witnesses executed...

Much of life is lived on the odds. Nothing is guaranteed. If you are being robbed by a man with a gun pointed at your face, what are the odds that you will be injured if you resist? What are the odds that you will be injured if you comply? It's as simple as that...

>Get'n Go employees have been fired after foiling holdups due to company
>policy which requires them to do nothing to resist.

As a store owner I would fire such people. Not only do they put customers and other employees at increased risk of injury, but they also put the store in potentially millions of dollars of liability if those injuries should occur. And for what?? $50 in cash...

Well I don't agree with you at all Rob. BTW, sorry to sound so harsh in the
first post there and thanks for not escalating the flames. In my opinion having
a repeater on the moon is no more inaccessible than having a repeater in orbit,

both are pretty well 'on their own' so to speak.

Hell, guys even bounce signals off the moon so why not use a repeater?...think of the prestige!...think of the fun of seeing how little power you can use to 'chunk' it!...gee...when it IDs in Morse you tell your neighbour that he's listening to "a ham radio transmitter on the moon"...instant big impression!...where's your 'experiment quotient'?.

When 'man first set foot on the moon' I took my two boys and two girls outside that night and pointed out the bright moon and told them that there was two men walking around on the surface there 'Right Now'...they remember it to this day! (at least the boys do!) and they were around 4 or 5 then!.

In the real world, victims who resist are less likely to be injured,
those who are injured suffer fewer injuries, and to less extent. Those
who resist with firearms are the least likely to be injured.

This, according to the FBI, who are certainly no supporters of civil
rights.

> Why do you think most convenience stores have a no resistance/no guns policy for

Oh, the old military jeep was definately a mixed bag - its faults were legendary, but so were the praises for it. Who knows how many millions fell in love with that little thing over the years it was in service, almost all of them with an interesting story to tell.

I've had the opportunity to put both of them through the paces, and I'm still convinced the jeep was the better overall design. Since you, and I would guess a good many others reading this thread, have had the opportunity to experience the jeep in some manner, I'll concentrate on the humvee instead.

The first thing you notice when you get behind the wheel is the overall lack of visibility. On some of the layouts, especially with the tops installed (hard or canvas), it is almost impossible to see anything from four to eight o'clock behind the vehicle. This adds greatly to its ackwardness in city driving. However, even without the tops, it is still difficult to see everything behind you, mainly because the back of the vehicle is so tall.

The next thing you notice is the size. Despite its rather simple purpose, this is a fairly wide vehicle, which makes it ungainly on narrow roads overseas.

Driving on the road can be fun also. The humvee has very "responsive" steering, which, while good for offroad performance, makes it difficult to keep the vehicle straight on the road (especially at speeds between 25-35mph, and again at about 45mph up).

Speed is definately not a selling point for this vehicle. It is very sluggish on acceleration (an Abrams battle tank could out accelerate this thing), which is probably not bad considering how difficult it is to drive smoothly.

Okay, so the humvee was not designed to be a great automobile. It was designed to be an off-road vehicle, and that is indeed where it shines. This is a vehicle that can get you into trouble off-road. It's performance is so strong, you almost have to push it to see what it can do. Pretty soon, you're doing things that you probably should not be doing. Luckily, nine times out of ten, this vehicle will pull you through anyway.

However, in spite of its excellent off-road performance, I still give the nod to the jeep. Yes, the humvee will go places off-road the jeep would not dare, but the average jeep driver would simply avoid this terrain (finding a more comfortable route to get where he needed to go). In other words, this off-road ability is simply not enough to overcome the vehicle's other limits.

No, sorry Jones. It's customer liability they're worried about. If someone gets hurt during a robbery they don't want it to be as result of an employee's actions. The tort suits would fly.

And if it came down to me working in a store and I got fired because I
popped a robber, I'd tell the owner just how far into darkness he could
put his job and if he don't like it he could shove it.

Jerry

Must be routine payday for most of the perps. It doesn't take many
robbers to cause a lot of senation. After all if they're doing it as a
career they've got to have regular paydays if they eat.
But one never knows when the real nasties are will show up.....

A Few Weeks ago I had put out a message saying that Cushcraft had given me poor customer service. I had a R8 Vertical (6-40 Meters) and it had been working well and all of a sudden it just stopped working. I talked to them and they had me send the matching network back (The Black Box). A week after I returned it I got it back with a form letter saying it had been tested and it was fine. To say the lest I was unhappy with them.

Well I have to say that 3 days after I got the matching network back they called and left a message on our machine saying that they had sent me the wrong matching network and was sending a NEW one out that day. New Years Day I put it all back together and my Son and Neighbor helped me put it back up and its now WORKING GREAT AGAIN!

It took some time but CUSHCRAFT TOOK CARE OF ME!

I thought it only fair that I let everyone know after I had told everyone about the trouble I had.....

I still have the old matching box and if Cushcraft does not ask for the one one back I am going to take it apart and see what I can see. I think its a bad soder connection. It also had a much larger Cap, its the same value but its larger in size.... Hmmmmmm I realy want to tear it apart and figure it out.

73's Everyone and thanks for all the help from the group

Try an old Dan Wesson 15-2V8, the 8" ventilated
barrel. Or the VH8, the 'heavy' ventilated barrel.
And set the cylinder gap to the tight side...

Or even... track down one of the older 12" barrels.
I've been told they made a couple of 18" barrels,
but they weren't in any catalog or price sheets.

Mike

Your astronomy is incorrect. The moon keeps the same side toward earth at all times, plus or minus a few degrees, so your proposed rig would be workable at some time of day every day of the month, assuming that your proposed frequency isn't swamped by the sun on those few days each month that the moon is near the sun in the sky. However, it would be in total darkness for approximately two weeks each month.

For accuracy and horsepower, think unlimited silhouette pistol.

You haven't known pain until you torch off something like a 45-70 (yes,
45-70, not a typo) in a handgun.

My favorites are the 7 TCU (.223 necked up to 7mm) and the 7 INT R (30-30
necked down to 7mm).

Jim Pennino

But at LEAST I can punctuate "can't," you functional illiterate. That
must've been some "college education" your parents paid for, they
certainly were cheated, LARDASS!
Now, as to the original topic of the post, I answered the poster's
question. Hell, I didn't even attack Strom. You stick your fat face in
here and contribute nothing...but that's nothing new is it? You listen
to SW programs with that cheap-ass Radio Shack receiver, have no
antenna of note, and probably don't even know anything about
propagation to begin with.

> I bet you never were in the armed forces.

Guess again, Porky. I think YOU, not Rich Whiten deserves that handle.
<pun intended>
USAF...Honorably Discharged ....live with it. Now, like Al
asked, why didn't YOU serve int he armed forces? Never mind, I'll tell
you: you couldn't pass the basic skills written test, you certainly
couldn't meet the weight requirement, you have a YELLOW streak running
down that boil-encrusted, pock marked back of yours.

> Jackass corps is best you could do.

You doing your imitation of Pee Wee Herman again,
Lllllllllllllllllllllllllloyd?
It would've made more sense for you to have typed "The jackass corps is
the best you could've done." Instead, you chose to write an incomplete,
trite, drug-induced babble that unfortunately *IS* the best you can do.

Source record: 96618

Yeah, Dwight!

Not too long ago while at a CAP search practice, I saw something I had not seen in nearly 20 years. One of the members of a nearby CAP squadron had literally rebuilt an M38-A1 from the ground up! He had put it back into the original CAP livery--decal placed on the hood, correct markings.lettering including the "TP35" on each fender AND it was in the (then) required USAF blue. I mean to tell you that thing was just beautiful, and, man, how it brought back memories!! He quite literally had a brand new Jeep--interior and exterior just emaculate. He saw me admiring it so much (I just kept going out to where it was parked just drooling!), he offered to let me drive it. He said he wanted to see if I "remembered" how. OH, YEA! Climb in, turn on the keyless switch, pull out choke, depress clutch, step on starter at the top right of accelerator, and that little Hurricane four sputtered to life (after a few adjustments to the choke) and then settled into that familiar, sweet little buzzz. And off we went down a little grassy lane near the airport. For me, if someone had offered me the choice between a ZR1 'Vette and the Jeep, I'd a' still took the Jeep! After all those years, it was still like settling down in familiar territory, instantly remembering the sensations and the behavior of an M38. Doggone it! I've been looking at Jeeps at the Chrysler place ever since! And I'm a Chevy man! LOL!

Speaking of the little habits and behaviors of the old Jeeps, they are well documented. I haven't driven a new Jeep (yet), but I know about the ones of the older genre. The short wheelbase could get you in a lot of trouble. Misconception of a Jeep's abilities getcha in a mess, too. Many people think a 4X4 will go anywhere, do anything up to climbing a tree! During the last days of the Jeep's service with CAP, we were doing terrain familiarization tours as an exercise and mapping county trails that could be used to get to a plane crash. During one of these outings, some kids discovered us riding a powerline and thought it would be fun to follow the military guys in the AF blue Jeep. We had no real authority to stop them, so we basically ignored them. They had a new CJ5 with the notorious V8 engine (a horribly dangerous combination). We came upon a VERY steep incline which was obviously a bike trail. We stopped, dropped into low 4 and proceeded to climb the hill at a prudent speed--a cross between a fast walk and a crawl. At the top, there was a vertical face about 2 feet high which required us to "gun" it just a bit so the little 4 would get us over it without stalling. The kids were impatient, wanted to show off, and instead of crawling slowly up the incline, they raced up it at a too fast speed. When the front wheels hit the short vertical, the Jeep reared and tumbled backwards end for end down the slope. Lucky they wore seat belts! All 3 boys sustain-

ed serious injuries--broken ribs, collar bones, arms, etc. Tragic. I always said, at least, in the days of the CJ5 that everybody should be trained to operate them.

Lastly, something amusing that happened to me. One year we had a very bad snowstorm which kept me pretty much at home for a few days. I ran out of food and decided to use the Jeep to go get groceries. It was assigned to me, and I kept it at home with me. Now I KNEW what could happen, so I gingerly crept down the street in HI 4 (snow was 8"). I slowed to a crawl and attempted a right turn onto a city street. Again, short wheelbase and inadequate "turning" radius works against the old Jeeps. As I slowly turned the corner, the Jeep just kept turning round and round about 3 times ending up facing the way I came. It was almost like slow-motion movies--all I could do was just hang on while the Jeep made slow donuts in the street. Musta been mighty funny cuz there was a family nearby just a-snickering away while they built their snowman! What would it've done if I had been going faster? No telling where I would've ended up. But I knew the characteristics of the thing, so I wasn't exactly surprised when it did go around--I was just a little sheepish about letting it get away at slow speed.

Ah.....memories of the Jeep.

Tnx fer being patient at my ramble down memory lane.

Jerry

Yes, we all learned that in elementary school science. That doesn't
change the fact that the moon is *visible* for a minumum of 20 days
per month. The remaining time the equipment would be in the shadow
of the earth and the batteries wouldn't be charging.

Hey Anonymous Put your name on the post then it might be taken half serious.

200 million plus have been killed and exterminated in the 20th century
because
of gun control, ask Pol Pot or the Myans!!! What about the IRS harassment
driving him over the edge? How About the pharmaceuticals that every one
of these mass murders have been on? Oh did the press forget to tell you
about the combination of drugs they, including the Boston shooter,
PROSAIC, LUVOX, and RITILIN were on, how about banning
ELi-Lili or the quacks who place them on these drug's?, Oh Mass has
about complete gun control, moron to begin with and CNN which is
owned by time warner and is Russia's official news leans so far to the
left they fall over, Its people control not gun control moron,
Slaves are disarmed You want Gun Control go to Cuba and leave this group
for amateur radio something I doubt you know anything about!
So buzz off Anonymous Anus lips or at least grow a set of balls and
put your name with your post!

Exactly. If it was safer for the clerk to be armed and to resist
robberies, then there would not be a store policy against it...

Fat Teddie "Pants Down" Kennedy sure had no qualms ref. one of his
bodyguards being caught carrying an illegal Uzi full automatic weapon
several years ago into the nation's capitol. Teddy got that swept under the
rug and all charges were quietly dropped. No press, no nothing, yet this man
who drowns young women wants to be sure that the "peons" he rules over are
not allowed to protect themselves and their families from the criminals he
is so afraid of.
My concealed weapon is less dangerous to the public than is Ted Kennedy's
car.

A clerk being killed by a criminal doesn't cost the insurance company
much money. A customer being accidentally killed by a clerk costs the
insurance company an arm and a leg. Sad but true. Customer lives are
worth more to the insurance company than clerk's lives.

Stores are required to use reasonable care in protecting their customers. That's why many hire security guards to patrol parking lots and malls. And those security guards can go to the aid of a victim/customer during the commission of a crime with the store's blessing. But that is protecting the *customer*. Things are quite different when protecting the stores property, especially when that property is the small amount of petty cash that most robbers get at convenience store hold-ups. In your tort suit the jury would surely ask why the store would risk a customer's life over $50 by arming employees and telling them to resist. You are probably right that the policy is there mainly to reduce liability, but the reason that there is less liability is simply because it is usually safer for all concerned, customers and employees alike, to not resist...

Jeff, at no point in this thread did I say a blessed thing about
murderers. Although husband-killers are the best parole risk in creation
after 6 months or so it is probably better for husbands everywhere if
penal officials do not accept the bargain too early.

A burglar, Dyer Act offender (admittedly it is a bit hard to be convicted
of interstate transport of a stolen car from Hawaii) or miscellaneous
felon who draws a sentence, completes parole, and stays out of the way of
the system for five years or so after that probably should have his debt
to society marked paid and have his civil rights restored. If nothing

else, it is an incentive.

Crimes against persons, especially with violence or malicious intent, are horses of a different stripe.

If you recall your Biblical text, during the crucifixion, Christ
was flanked by two thieves. One admitted his sins, asked for
forgiveness for his sins, and was granted absolution, but still died
for his crimes. The other, asked to be released from his punishment
and was rebuked.

There is a difference between forgiveness, and pardon. Forgiveness
may precede, follow, or be made concurrent with punishment. But
punishment continues. The lesson of criminality is still learned.
Pardon is a release from punishment, and nothing is learned.

What's mistaken for forgiveness these days is pardon, usually with
the admonition, 'we must temper justice with mercy.'

What we forget is that before we can temper justice with mercy,
there must first be justice.

That explains the massacre in Mass. alright. Now, go tell that to the family members of those who were killed. I am sure they will be assuaged by this useless tidbit of dubious trivia.
I recall a mass shooting years back in a fast food restaurant in Texas during which a legally armed man stopped cold the shooter who had shot several customers and was bent on killing more before this legally armed citizen stopped him cold. As in dead cold. This legally armed citizen saved lives.
Liberals hate that.

It's simple corporate economics. Reality is that a lost employee can be replaced at the drop of a hat, but the possibility of losing millions in a "deep pockets" wrongful death civil suit (often filed in liberal states by the dead robber's family) is their main concern.

Gun Control, in the hands of those legally licensed means being able to hit a target. Gun Control means that I can protect myself and my family from aggresives who mean me harm. Gun Control means that a citizen should be able to "plant" three out of five shots squarely in the chest of a home invader or would-be rapist. Gun Control means you stop the threat and protect yourself.
Good Gun Control assures that predators will never again victimize innocent families. Dead Criminals never return to victimize other innocents. It works.

Again, no one has said a thing about a release from punishment. What I advocate is a simple recognition that punishment has been served, the debt paid, and some time after the completion of punishment and evidence of reform civil rights are restored. Forgiving sin is God's domain and he can have it.

All I advocate is some recognition that the debt is paid and civil rights restored by earning them. This was once common practice in virtually all states without an interest in keeping blacks from voting

In your tort suit the jury would surely
ask why the store would risk a customer's life over $50 by arming
employees and telling them to resist.

Trouble is that in so many robberies the perps, who are usually drugged-out
minorities, show no compunction at shooting these innocent employees. For no
reason. These doofuses think that they SHOULD shoot the store employee and
they have no reason to do so aside from inherent stupidity...we call it TNT.
Typical Negro Trauma....shoot first, think later.
If more TNT's were shot in their tracks, robberies and homicides would
decrease. Drug sales would also drop off proportionatly.

That is actually pretty bad. An earth-orbiting satellite would be visible
every day and could even be visible all the time.

>amateur gear up there could provide consistant communications
>for 2/3 of each month (or until the batteries ran down during the
>periods when the moon is in the Earth's shadow).

It does not work like that. Study it again.

This certainly shows you have not informed yourself before.
Read up on the situation, the problems, and the usefulness of the result in
one of the many posts that have been made before, or the G3RUH article.

Many amateurs may be prepared to donate money to get a useful satellite
to do every-day experiments. Few will be prepared to donate money to
compete with the government or private corporations about "prestige".

Agreed...store employees should be able to protect their own lives. It
ain't a matter of fifty bucks....it is a matter of who goes home at the end
of the evening. Put a gun in MY face and I have the right to shoot you and
shoot you and shoot you. I want to go home to my family and I don't care one
crap about you or your rights and I will shoot you as many times as it takes
to knock you down.
Screw the jury. You do not belong in this store if you mean to rob me. You
have no rights.
Bang, Bang...

Just wondering how a certain Felon down around the Southern part of the country is doing. Things in "Bird Land" must be running well enough despite the monetary problems.
Should this Bird Brain need a few extra dollars to help pay for his overdue bills, I will be willing to loan him $27.50 on his car.
If the car runs, that is.
He can use the $27.50 for a big jug of rot-gut and a box of crackers.

Right now, I would rather spend my money rescuing a Garand via CMP then engaging in local shoots.

Next fall I will introduce my number 3 son to squirrel hunting. I cannot decide between a youth model 410 or 20g. I think the initial bark of the 20 g. might scare him off, but he will outgrow the 410 capability very quickly. H&R has an NRA 28g yute shotgun which might be a good compromise. I hope the 28 doesn't go the way of my old 16g.

Once those basics are taken care of, I'd like to try your silhouette pistol shoots. I think the 375/38.55 will be my 1st Contender barrel.

73, Brian

Clerks are expendable. There will always be someone willing to take the job, and in fact there is already a high turnover. People EXPECT clerks to be robbed, and a clerk's family won't get too far suing the company if the no-resistance policy leads to rape or murder.

OTOH, if some hoplophobe like YOU were in the store when it was robbed, and the college coed behind the counter used a gun to avoid being kidnapped and raped, we can be pretty certain that you would sue the company for a few million over the "trauma" of seeing her shoot the attacker. Win or lose, the company will still lose a lot of money in the battle.

You're mixing two incidents.

In Texas, the killer wasn't stopped until the cops finally showed up.

The one soon after was at Shoney's in Anniston, Alabama, where the armed
customer stopped an attempt at mass murder before any innocent was
killed.

>It's simple corporate economics.

Which is why most stores have the no resist policy. There is more likelihood of injury or death to employees and/or customers while resisting than there is while complying. Sure there are exceptions, but as a general rule this is true. No death or injury, no big lawsuit...

>but the possibility of losing millions in a
>"deep pockets" wrongful death civil suit (often filed in liberal states by
>the dead robber's family) is their main concern.

Suits are often filed no matter what happens in our litigious society. The best a store can do is to try to act responsibly. Would it be responsible to arm a $5 an hour clerk, who has little weapons or combat training, and order him to resist robberies? Of course not...

As a start look up the book "Blackhawk Down" for some insight into Somalia. Somalia has a clan system not unlike the old Celtic clans, not warlords. Clans have chiefs. The difference is that if you kill a warlord, there is internal fighting until a new warlord gets power. With Chiefs, a new one is elected or the next in line steps up. They had a well run peaceful system until first the Communist and then the Oligarchs from the UN tried to destroy the clans. The fighting started when the US and UN decided to arm and promote one clan at the expense of the others. In a generation or two, the Clan system will stabilize again back to what it has been for thousands of years.

Gee, did I picture Lloyd all wrong. I took him for an affluent retired
gentleman who had nothing better to do than to sit here and attack
blacks and Jews, not necessarily in that order. Now I find out he's a
HUDsack? Wow. Here's something for you Conservatives. I'm sure you're
well aware of Sean Hannity on WABC who's gaining popularity as Rush
Limbaugh's protegï¿½. Did you know he got his start on talk radio in
Athens Alabama and married a gal from there? Yep, I kind you not.
Maybe Brother Lloyd does have a chance because of living in such a
prominent and famous place?

And criminals are aware of this stick your head in the sand and give up attitude... That's why they call them stop and robs. My wife once managed a "Zippy Mart" and guess what, when the big wheels came on their annual inspections and worked the night shift, they were all packing. The corporation is covered by workman's Comp if the employee gets killed. No big deal, but they stand to suffer if a clerk were to wound a customer. It's a no brainer, prohibit the employee from being able to defend their self and no biggy if they get killed.

In Minnesota the penalty for armed robbery is five years of hasslement by
social workers. Most felons prefer the slammer :-)

Capital punishment is reserved for smoking.

The shure 444-D, black mic is a good one and can be used when an impedence such as that for a yaesu 920,990,1000, 726 etc. can be called for. It is a very good mic. and I have used one in the past with good results.

The shure 444 which is a silver\gray mic., is not as good and picks up a lot of 60 cycle noise etc.

Yet another gutless anonymous posting. What a chicken s _ _ t. The reason crime is going up lately is because there are more controls over gun ownership. Look how crimes, assaults, and murders have gone up in England and Australia since they enacted very strict controls over gun ownership.

People are killed by high powered sports cars every day and I don't hear this gutless chicken talking about banning cars.

Burt,
The only problem with DX'ers is that they are, in general,
discourtious and don't seem to ~ever~ listen befor transmitting.
If the frequency is busy, they don't seem to care so long as
they 'get' their contact. The split frequency nonsense is even
worse. If they would pay attention, not interfere, and use
a few manners, I don't think anyone would care what they did.
Unfortunately, they don't. (I know some do, but they are few
and far between.)
'Doc
PS - Same for contesters except more so.

Hmm, I wonder how they got that rating...

Actually, MASS has a concealed carry law, and in the
'outlying communities', most PDs issue protection permits
as a matter of course. See here in Mass, we need to have
a permit to even LOOK at a gun to buy it. But once you
buy it, most people can carry. But it's a pain...

We have no waiting period in MASS. But it can take
MONTHS to get that permit. Once we have the permit,
we can buy sell and trade without hassle. All it takes is
a 'blue card', as long as we don't get rid of more than
4 guns a year. Then we come under dealer rules.

And... I've found that a number of states will honor or
issue on my Mass permit. It seems to carry a lot of
weight when I travel.

Yeah, the laws here are asinine in some regards, but in
others... As long as we can 'sidestep' the abuses.

Well, the 18" (or a rumored 24") are out of the norm. You'd
look like the Joker in that Batman movie! But my Dan Wessons
can make ragged holes at reasonable ranges. And the guns
are FAR more accurate than I am.

I have an IMHSA handbook around here somewhere, and
it shows a 3x5 note card with 3 bullet holes on it. Shot at
210 meters, with a Dan Wesson.... (And the 3 holes were
in less than 1/3 of the card!)

Oh, I've had a few amusing moments also. For example, while I was in the Army in Germany (god, I'm one of those old guys telling about the good old days overseas), our unit served as umpires during one of the reforger exercises.

Anyway, the division commander was out to the exercise area and had noticed that some of the officers involved were missing equipment. Anyway, he returned to the unit area to see if we had any extras that we could lend them. After a quick stop by the headquarters building, he, the company commander, and a few other staff officers, went looking through our storage facilities to locate the stuff.

After they found what they were looking for, the company commander asked me to take the stuff out to the field and deliver it. This involved a drive over to another part of the base, where considerable construction was going on (new roads, storage buildings, etc), to pick up a trailer for the jeep. After I got the trailer, I decided to take a shortcut (they were waiting for my return), so I hauled tail across this dirt field used to park tracked vehicles.

As I came around a corner between some tanks, about a block from where they were waiting, doing a good 45 to 50mph, I saw that someone had dug a new ditch beside the road I had intended to cut cross.

Well, needless to say, I hit the brakes as hard as I could. The fact that I was still going around the corner put the jeep into an immediate spin. Anyway, the jeep slid round and round, a huge cloud of dust flew, and I held on to the steering wheel for dear life.

When I finally came to a rest, and several moments later as the dust settled, I realised that I was facing the way I had just came from. And the trailer had jacknifed so tightly, I could reach out from the seat and touch it (without stretching). The jeep, trailer, and myself, were covered with a good layer of dirt and dust.

Of course, as you would expect when you screw up, they had saw the whole thing and had started running over (thinking that I had wiped out and was probably dead - all they could see was the dust cloud). As they

approached, I saw from the tire tracks that I had spun around four and a half times.

Anyway, once they got over to my location, and saw that I was okay, they all busted up laughing. When I looked in the mirror, I realised what they were laughing at - I looked like a racoon. My entire face was covered with dust, with only my eyes poking out of the dirt. I felt like a damn fool. Not only was I speeding, driving like a maniac, but I was seen by the very last people I would have wanted to be seen by in this situation.

Other then the layer of dust, the jeep made it through without a scratch. As they walked off, still laughing, I took the jeep to the motor pool for a quick wash, stopped by the barracks for a shower and change of cloths, and then went on to deliver the stuff.

The rest of the time I was there, none of these guys let me forget that incident. It turned into an endless source of amusement for them. During an award ceremony almost a year later, the division commander even brought it up again in front of the entire division.

The Dan Wesson is the finest service revolver design in the world.

I carried one (.357/4") until finally moving up to self-shuckers.

4323. Re: Seven people die because of no gun control

Newsgroup: rec.radio.amateur.misc

This arrived today, from (Colonel) Jeff Cooper's "Commentaries":

"And heroism is not confined to warfare. Gunsite family member and illustrator Paul Kirchner recently had occasion to interview Lance Thomas of Los Angeles, the jeweler who achieved a measure of fame a few years back by successfully repelling boarders in his store in Beverly Hills. Mr. Thomas now has a confirmed score of six kills in the simple course of business. Various people seemed to think that a man who sold watches would be easily intimidated. Not so. As Mr. Thomas said, "I am not a rabbit." Paul tells me he does not look like a rabbit either. In personal appearance and attitude he does not seem to be a good man to attack, and so it turned out. But violent criminals are seldom bright, and frequently assume that the presence of a gun in their hands renders any sort of resistance out of the question. Lance Thomas is a hero, and we may thank God that there are men like him left in our society. (Though not in Britain, of course.)"

This should pretty much put paid to Aaron's theory.

Of course not. But I think that any large well run company spends a considerable amount of time and money researching and promoting the safety of their employees and customers. That just makes good economic business sense. The no resist policy is the result...

>It's the bottom line that they're primarily concerned about.

Exactly. Less employee/customer injuries means a better bottom line for us stockholders... :-)

Here are the Cyber Amateur Radio Club awards for the year 2000. Thanks to those who emailed in nominations.

Dr Heimlich Award : Mako JE3HHT: For breathing life into RTTY and rescuing it from the PSK31 choke-hold

Most Overrated: Riley Hollingsworth K4ZDH ...Despite his hard work the bands remain a mess.

Mr. Congeniality: Jan KX2A for his splendid efforts in leading the Zakanaka and MMTTY help teams.

Biggest Disappointment: The Solar Cycle.

Sahara Desert Award for DRY humor : Bob Furzer K4CY

Pseud of the Year (thanks to Private Eye): Jim KH2D

The Halcion Sleeping Pill Award: WB6PSY his Ebonics act is getting quite tiresome.

Mr. Versatility? Nick UT2UZ : MixW, more modes that you can shake a stick at.

Software of the Year: Zakanaka with MMTTY.

Best Reflector: The MFSK Reflector. Good info , friendly people, and no squabbles.

Missing in Action: CT contest software, a tired looking program. Time to retire and hand the mantle to Writelog?

Karl Marx Award: For sharing equally... Moe AE4JY

Trendsetter Award: The DigiPan Team .

General Ham Site: eham.net (http://www.eham.net/

Biggest tragedy: 9A4SP 4W/9A4SP , Carlos Luis Caceres-Collazo KD4SYB , and Samson Aregahegn killed in East Timor.

Most Missed Voice: Alan EA7BA the perfect ham, SK.

Country of the year: Ukraine. Their hams shine in behavior and resourcefulness.

Happy New Year from Andy KB2EOQ and the CARC (http://www.netsync.net/users/obrienaj/carc.htm

Thanks Russ. I'm somewhat familiar with Somalia and the warring clans.
The US never armed any of the clans. They were already armed to the
teeth by the Soviets. Nor did we promote any of the clans, although
after killing Americans, we should have thrown Aideed out of the
aircraft on his way to Addis for a UN "peace" meeting.

Financial, yes, but how about the rest of it? Do you consider the
singleminded pursuit of financial prosperity to be the single most
important criteria? If it was there wouldn't be so many social problems.
The obvious financial success of many investors, coupled with many
factors showing lack of morality in business that have helped fuel it,
have served as a lesson to many who were not involved in that success.
Sort of a "Don't do as I do, do as I say" thing. Company loyalty to
employees? Long gone, factually shown daily. Why should any emplolyee
feel loyalty to the company? Just show up, do whatever the job calls
for, collect the pay and, go home and forget it. Or worse.
Didn't used to be that way. Shouldn't be today. Blame the beancounters
and their bottom line, fueled by greedy stockholders.

Those devices don't have real antennas. That explains in part their limited
range.

Like the head baboon eating the coconuts first and spitting the juice at everyone else?
I have to wonder what hobby exists when you have more than legal power or at least 1kw, towers that rival a foreign broadcast station, a voice that sounds as if its been schooled in sounding snotty and operate only a few hours a year during contests. At that time no one else need operate because the band is HIS!

Is it all worth it?
Heck on the internet I can talk with anyone I please, full bandwidth, seven/twenty four.
I say elephant gun em now!

The antenna simply radiates radio frequencies that are generated by a
transmitter and have some sort of modulation (intelligence/data)
imposed on them.
Dog collars and garage doors have usually very simple quarter wave or
less of wire as antennas.
In the case of animal tracking the gain is in the receiver, not
transmitting antenna.

i know that i can fine-tune the "antenna" in my garage door transmitter by twisting it with a plastic screwdriver, but i dont know how to get a base tuning. i assume it has to do with the amount of wire that is coiled around whatever it is coiled around. ferrite maybe?

thanks

Dick Carroll <dixie@townsqr.com> wrote:
>Do you consider the singleminded pursuit of financial
>prosperity to be the single most important criteria?

Single-minded? No. I raised a large family on a small paycheck and enjoyed every minute of it. But now that I am retired and have made more money in the stock market than I did when I was working, I have developed a strong like for our free market system... :-)

>If it was there wouldn't be so many social problems.

You will find that many of the social problems of the cities occur in the low income slum areas of town. These are not people with a single minded pursuit of financial prosperity...

>Company loyalty to employees? Long gone, factually shown daily.
> Why should any emplolyee feel loyalty to the company?

When I worked at Motorola in the 60s, the best way for an engineer to get ahead was to quit and go to another company every few years. Employees have always gone where they can get the best job, as they should. If a company wants to keep a loyal employee it must pay for the privilege in wages, satisfaction, perks ect. Any employee who is loyal for some sentimental reason is a fool...

>Blame the beancounters and their bottom line,
>fueled by greedy stockholders.

The desire to get the highest return on your money is the goal of any investor. If the stockholders didn't *risk* their money to fund companies with capital, many working people would have no jobs...

>would moving the radio away from the equipment help?

Might be the supply, might not be. There's many components in there which
can emit RF on amateur bands, many newer versions of components have failed
to correct the problem even though it's been there for some time. I have a
PC in the shack which is only a couple of years old and it still causes
noticeable problems on 146 MHz.

And yes, moving the receiving equipment away from the source of the noise is
one of the primary recommendations of the FCC for handling RFI, and a good
place to start.

Good Deal Steve..you sure have a lot of thingies to hang off of your
call. Too bad you can't talk out of your backyard with that nocodetech.

And if you feel froggy...go ahead and jump right in, but remember you
are the one that butted in and you will have to deal with it. HNY .

Oh and BTW... do you see this on the air? NO. You get a life.

You're not tuning an antenna but a capactor in an LC or RC circuit of the transmitter. Not all garage-door openers operate on exactly the same frequency.

On Sun, 31 Dec 2000, Jeff Anderson wrote:

SB DX @ WW < KB8NW $OPDX.492
Ohio/Penn DX Bulletin No. 492

The Ohio/Penn DX PacketCluster
DX Bulletin No. 492
BID: $OPDX.492
January 1, 2001
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K2KW, W3UR & The Daily DX, WB3LHD, K4PI, K4ZLE, KN4UG, N4AA & QRZ DX, W4WSZ, WB4PVT, N5FG, N7NU, K8YSE, F5NOD, F6AJA & Les Nouvelles, I1JQJ/IK1ADH & 425 DX News, JI3DST, OE8CIQ, PY2KQ, PY3CQ and RW3GU for the following DX information.

SPECIAL EDITOR'S NOTE: My family (wife/OPDX's chief proof-reader Linda, Tedd [TJ], Katie) and I (KB8NW) would like to wish all DXers, Contesters and OPDX readers a very "Happy New Year". The year 2000 was a great year for DXers/Contesters. It brought two new DXCC entities, East Timor and Chesterfield Island. The year 2000 has also brought DXers activity from Bhutan (A5). For years this entity has been the number one most wanted country. It has also brought us Bouvet (3Y), Clipperton Island (FO0) and Tromelin Island (FR/T), just to name a few. WOW, what a year! Let's hope that the year 2001 will be just as kind to DXers as 2000 was. Many would like to see a major operations to North Korea (P5) and Scarborough Reef (BS7). After working one or both of these entities many DXers would probably receive the ultimate "ARRL DXCC #1 Award". Also, let's hope the new year brings the DXers/Contesters another exciting year and great band conditions. As always, I would like thank the many who have contributed information over the year (there are too many to list). REMEMBER, without them there would not be an OPDX Bulletin.

3B8, MAURITIUS. There has been a lot of activity from this one over the last few months. Abid/3B8FG, Jacky/3B8CF, Rashid/3B8FQ and Pat/3B8GF have been quite active on 20 meters, generally after 0200z. Pat usually can be found on SSB while the others are on CW. There has been some 10 meters CW/SSB QSNs by 3B8CF and 3B8FG after 1200z.

3Y0, BOUVET. Astronaut Chuck Brady, N4BQW, continues to be active in between the bad weather he has been receiving. This past week he has been active on a few other bands besides 20/15/10 meters. There were spots on 12 meters (24945 kHz between 1400-1900z), 40 meters (7096 kHz between 0045 and 0130z) and 80 meters (3790 kHz between 0100 and 0200z).

QSL via WA4FFW. Also, watch the following Web pages for updates:
http://www.qsl.net/zr1dq
http://www.qsl.net/wd4ngb/3y0.htm

4D68, PHILIPPINES. This special prefix is being used by some DU operators to celebrate the 68th anniversary of the Philippine Amateur Radio Association. Aki, 4D68HBC, was heard this past week. QSL via JA1HBC.

4S, SRI LANKA. Ananada, 4S7NB, likes to frequent 20 meters (between 14180 and 14205 kHz) after 0100z.

5R, MADAGASCAR. Albert, 5R8O, continues to please the many on 20 meters CW around 14015 kHz (+/- 3 kHz) after 0200z. QSL via 5R8FL. For the SSB ops, Andre, 5R8FL, likes between 14185 and 14200 kHz after 0230z. He sometimes can be found on 10 meters, this past week on 28507 kHz at 1145z. QSL via CBA. Ake, 5R8FU, was also active on 10 meters CW/SSB. He was around 28029 kHz (0930-1000z) and 28442 kHz (1230-1400z). QSL via SM5DJZ.

5U, NIGER. Dan, 5U7DG, was heard on 3796 kHz this past weekend around 0100z and again at 1600z. QSL via K4SE.

8Q, MALDIVES. The "425 DX News" reports that Gil, IZ1DLV, will be active from Dhiggiri Island (AS-013) from January 2-9th. He will operate on 10, 12, 15, 17 and 20 meters SSB. There was no callsign mentioned. QSL direct ONLY to IZ1DLV: Gil, P. O. Box 7039, 16148 Genova - GE, Italy.

9H, MALTA. ALbert, 9H1AL, has been active on the WARC bands. He seems to like 12 meters lately. Check around 24900 or 24957 kHz between 1530z and 1630z. Also, check 18070 kHz around 1730z and 10103 kHz beginning around 2300z. He was also on 40 meters (7004 kHz) around 0030z.

9N, NEPAL. Lawrence, 9N7RB, in Katmandu, has been active on 20 meters CW/SSB between 1230-1300 and around 0200z. Check around 14010 and 14190 kHz.

9V, SINGAPORE. James, 9V1YC, has been keeping folks happy on 40 meters CW on 7011 kHz beginning around 2200z. He later moves to 15 or 20 meters around 2300z. Check 14025 and 21021 kHz.

A5, BHUTAN. "QRZ DX" reports that another operation from here will take place by Dimitri, RA9CO, as A52CO, scheduled for March 15-21st. He has his visa and tickets. QSL via UA9DD. ADDED NOTE: Remember to look for Glenn, W0GJ, and his son Mark, N0MJ, to be active this week as A52GJ and A52MJ.

ANTARCTICA. The "Russian Robinson Club" is proud to announce that the "International Complex Expedition" to the South Pole will take place from now through January 15th, with possible activities from D4/, CE8/R3RRC (Punta Arenas), R3RRC/ant (Patriot Hills Base - WABA MN-01) and from an air balloon above the South Pole as R3RRC/am. Operators will be RW3GW, UA3GVV and UA0XB. QSLs are via RW3GW. Also, for two QSOs made on two different bands or with two different callsigns during the Expedition, it is possible to receive a "Special Award" in honor of the 180th

anniversary of the discovery of the Antarctica by the famous Russian Explorers and Icemen Bellinghausen and Lazarev. The fee of the Award is 12 IRCs for the HAMs outside of Russia. (USD are not acceptable) The Award Manager is: Valery I. Sushkov, RW3GW, P.O. Box 3, Lipetsk - 398000, Russia.
The "Russian Robinson Club" also plans to activate the Chilean island "Riesco" in the Magallanes and Antarctica Chilean Province Group from January 15-20th, with the possible callsign XQ8RI. Operators will be RW3GW, UA3GVV and UA0XB. QSL via UA9OBA. For more details on both operations check the Web page: http://rrc.sc.ru

BA, CHINA. David, BA4DW, has been very active lately on 80 and 40 meters CW. Check 7000-7025 kHz starting around 1000z and around 3500-3515 kHz between 1230 and 1430z. QSL via: David Y.J. Zhou, P.O. Box 040-088, Shanghai, 200040, China.

C6, BAHAMAS. Lee, N7NU, will be in Treasure Cay on Abaco Island from January 18-26th, as N7NU/C6A and/or C6AJX. Activity will be on 80-10 meters and MAYBE 160 meters upon request. He will concentrate on CW and will try some PSK31. There is one catch to his activity, Lee states, "The hamming is (gasp!) secondary to vacation with my girl friend :-) ". QSL via N7NU.

CORRECTION TO OPDX.491. Under "T8, PALAU", we reported that Koji, JK7TKE, would be active this past week as T88TU from Belau. This operation took place earlier back in the fall.

D2, ANGOLA. Gabriel, D2EB, was active on 10/15 meters CW this past week on 21025 kHz between 2100-0000z and 28030 kHz 0900-1300z. QSL via I3LLH.

DIFO WEB PAGE UPDATED. Gil, F5NOD, CW operator for the FR/F6KDF/Tromelin Island 2000 expedition, reports that the "French Overseas Island Award" (DIFO) Web site has been update and now has some QSL pictures available on the site. Check it out at: http://f5nod.waika9.com/difo.html

DXCC NEWS......
"QRZ DX" reports that Bob, W4VQ, has filed a petition to the DXCC and DXAC asking them to consider the removal of Macao (XX9) from the DXCC List in accordance with DXCC Rule 5. This comes as a result of Portugal turning Macao over to China, December 20, 1999.

The DXCC Desk is reporting that it takes about 8 weeks for processing QSL cards now.

DXPEDITION UNIVERSITY (Learn the Art of DXing in Jamaica!). Kenny/K2KW and Tom/N6BT informed the DX community that after 10 years of planning and 2 years of writing materials, DX University is now a reality. You have a chance to go to Jamaica and "Learn the art and 'How To' of DXpedition Planning and Running Pileups!" DXpedition University ("DXU") is the first of its kind to provide a training ground for energetic radio amateurs wanting to learn the foundational methods and tactics of DXpeditioning. A group of 6-10 hams will go to a proven site in Jamaica (6Y). Participants become part of a team, just like the World Record

6Y2A Team. Learning begins before the trip with planning procedures and continues through the Jamaica stay. With expert hands-on training, team members will be shown the essential skills needed to feel confident about venturing out on their own DX-oriented vacations and in their ability to run and control pile-ups. There is not only personal instruction, but also hard copy manuals covering all aspects are also included. Besides setting up a complete multiple transmitter station and running DX pile-ups during the week, the team will participate in the A.R.R.L. SSB contest, with additional pointers provided during real-time. This is a learning environment, and all questions will be answered and fully explained. The Jamaican accommodations are radio-oriented (not a luxury hotel) and include full time staff, transportation (private driver), plus side trips during the week. To learn more about DXU and how you can join the team in Jamaica, visit the DXU site at: http://pages.prodigy.net/k2kw/dxu/

EP, IRAN. Mohsen, EP3SMH, was active over the holiday weekend on 15 meters SSB on 21286 kHz starting around 1300z. EP2MKO was heard on 10 meters CW the past week between 1230 and 1400z. He was also heard on 18070 kHz after 1400z.

FG, GUADELOUPE. Jacques, F6HMJ, will be active as FG/F6HMJ from here from January 10-24th. His modes and bands of activity were not mention.

FR5, REUNION ISLAND. Pat, FR5FD, was heard active this past week on the WARC bands. On some bands begging for a contact. Check 30 meters starting around 0130z and as late as 0330z. Check 17 meters around 18075 kHz around 0030z. Check 12 meters 24893 kHz between 1200 and 1500z.

HR, HONDURAS. Jay, K4ZLE (MU0BKA), will be activae as HR3/K4ZLE from January 12-15th. Activity will be on all HF bands, preference will be given to CW and the WARC bands. He will have PSK31 with him. QSL via K4ZLE.

IOTA NEWS.....
AS-047. Takeshi "TAKE", JI3DST, will be active from Daitou Island (Daitoujima Shimajira-gun Okinawa-ken) now through 0200z January 7th. He will sign as JI3DST/6 on 40/17/15/10/6 meters SSB. QSL via JI3DST: Takeshi "TAKE" Funaki, 2-18-26 Hannan-cho Abeno-ku Osaka-city, OSAKA 545-0021 JAPAN.

NA-213. Floyd, N5FG, reports to OPDX that the "Magnolia DX Association" has confirmed/planned a trip to Dauphin Island, Alaska, (New IOTA) for late February 2001. There will be at least two station active with many ops...etc.. The special callsign W4D will be used. Activity will be on the usual IOTA frequencies 80-10 meters and on all modes including PSK31 and RTTY. Operation will last 3 days and 2 nights (start on a Friday afternoon and last until Sunday night - local times). QSL via W5UE or via the W5 QSL Bureau.

OE75, AUSTRIA. Chris, OE8CIQ, reports that from January 1st to December 31st (2001) all amateur radio stations in Austria are allowed to use the

special prefix OE75 to celebrate the 75 anniversary of the OEVSV (this is the Austrian amateur radio club). He (Chris) will be on air as often as possible using the callsign OE75CIQ. There will be several awards that will be issued by the OEVSV. You can find more information on Chris's homepage at: http://www.edu.uni-klu.ac.at/~cirrasch

QSL INFO AND NEWS.....
Mike, K4PI, informs OPDX that Nasir, AP2NK, has asked him to relay the following: "those sending QSLs should not use his P.O. Box that is listed in the Callbook, but to use his street address shown in Buckmaster and QRZ. The P.O. Box is not very secure..."

Gil, F5NOD, member of the FR/F6KDF/Tromelin Island 2000 expedition, informs the DX community that they continue to work on the FR/F6KDF/T QSLs. They have received the QSLs from the printer one month ago. They have more than 10,000 QSL cards ready to be mailed, but they will mail all of the QSLs at the same time. The first QSL will be sent out around the 15th of January 15th.

Laurent, KM5M, is the QSL Manager for FO5RA. He states that the QSL cards aren't printed yet but will begin working on them in a few days.

Bob, W4WSZ, reports that he will not be handling cards for P43DO after January 1st, 2001. Please QSL direct P43DO.

Ben, PY2KQ (PP500A), informs OPDX that all QSLs for the PP500A operation are now being send to all operators via the Bureau and the direct QSLs are being returned direct.

QSL ROUTE FOR VK0MM. Just a reminder to watch for Alan's QSL route on the following Web site: http://www.geocities.com/vk0ld/QSLVK0MM.html

Buckmaster HamCall Notification Service: Registered HamCall users can take advantage of HamCall Notification Service. If you look up a call on Buckmaster's callsign server at http://buck.com/call
and it is not found in their database, the HamCall Notification Service will ask you if you wish to be notified when the callsign is found. All you must do is enter your HamCall User Name and Password and your request will be stored and automatically checked every day. When they add the callsign to their database, you will receive a courtesy E-mail announcing the callsign has been added. It also provides you with a link to the HamCall callsign lookup site. Each time you request a notification you will be shown a list of other requests you have made that are currently outstanding. http://www.buck.com/haminfo.html

SPECIAL EVENT. The XI Panamerican Jamboree will gather 8,000 Scouts from all America, for a joyful start to the new millennium, with 6 days of fascinating activities in spectacular natural settings like the Iguau Falls and the ecological Park in Paraguay, as well as the lake and the power station of Itaipu. The XI Panamerican Jamboree will happen on January 7-12th. A special station will be active for the event. Look for station PS5J to be active on all modes and bands. QSL via PY5UEB. Also, check out

the Web page at: http://www.jamboree.org.br/

T2, TUVALU. Albert, HB9BCK, is active as T20CK until January 8th. He has been very active 20/12/10 meters CW/SSB. Most of his activity seems to start around 2030z and lasts until 0500z. Frequencies to watch for are (or around): 14005, 14260, 24895, 24970, 28005 and 28495 kHz. QSL via the bureau or CBA.

VP5, TURKS AND CAICOS ISLANDS. Don, KN4UG, will be operating from here during January 19-30th, 2001. He will operate in the 160 Meters Contest and the NA QSO Contest on the weekends. During the week he will be active mostly on 28460 kHz as KN4UG/VP5. QSL to his home callsign in N.C.

WEB SITE CHANGE. Ron, WB3LHD, WPADXA Webmaster, informs OPDX that the "Western PA DX Association" Web site has moved to the following URL: http://home.adelphia.net/~rcberry/wpadxa/
Please update your URL's and bookmarks. They are sorry to all for the inconvenience.

XW. LAOS. Mauro/IN3QBR and Fabry/IN3ZNR are very active now from here until about January 8th as XW3QBR and XW3ZNR. Most of the activity has been on 20 meters CW/SSB with some activity on 15 meters.

YK, SYRIA. Excerpts from a press release by Bernie, W3UR, editor of "The Daily DX" report that the Cinco Nueve Contest Group (CNCG) and the Willamette Valley DX Club (WVDXC) are sponsoring a DXpedition to Syria. "DX Syria 2001" is a non-profit organization formed for the promotion and organization of this expedition. The Syrian government and local Syrian hams invited an American team of 8 operators for a February 2001 DXpedition at the Syrian Telecommunication Establishment (STE) site in Damascus. The group hopes to be on the air February 3rd. The group will be active for 9 days. The STE operating site is the same one used by the 1994 YK0A expedition. The group has been assigned YK9A and plans to be active on 6 through 160 meters on CW, SSB and RTTY. Team members will include: Ron/WJ7R, Dick/N7RO, Bob/W4DR, Rosalie/N4CFL (YL), Carl/K9LA, Vicky/AE9YL (YL), Jim/W4PRO and team leader Al/K7AR. QSL cards will be handled by K9LA: Carl Luetzelschwab, 1227 Pion Road, Fort Wayne, IN 46845, USA. The DX Syria 2001 Web site can be found at: http://www.qsl.net/k7ar
The Web site will include pre-trip news, setup news, propagation conditions, updated daily online logs and suggested operating frequencies. (OPDX InterNet Subscribers will receive the complete press release as an additional bulletin.)

ZB, GILBRALTAR. Jay, K4ZLE (MU0BKA), will be active as ZB2/K4ZLE from January 12-15th. Activity will be on all HF bands, with a preference to CW and the WARC bands. He will have PSK31 with him. QSL via K4ZLE.

Excerpts and distribution of The OPDX Bulletin are granted as long as
KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS
online at 440-237-8208 28.8k/14400/9600/2400/1200 and leave a message with
the Sysop or send via InterNet Mail to:
kb8nw@barf80.nshore.org - OR - kb8nw@arrl.net
Use the VOICE or FAX answering machine at 440-237-8208 which shares the
same phone line as BARF-80 BBS using a data/fax/phone switch. To access:
1) Dial Number. 2) Wait for first ring (the second ring should be a false
ring from the fax/data switch box) and then dial four quick ones ("1111").
(NOTE: Some FAX machines that send single "BEEPS" every second will not
have to do this step.) 3) The phone will pick up and after the "BEEP"
leave your voice message or FAX.

Dear Mr. Frankenstein,
Who called for you anyway and what does this flame_fest have to do
with the inherent greatness of ham radio? Is this forum QRMing you in
any way? My suggestion is to get the hell out of here and go on
rec.radio.amateur.misc/ so you can preach to a receptive audience.
AF2Y

Well what can we say Steve, you are so great, you must be a GOD!
You are better than all the rest of the people on this NG as a matter
of fact we need to stop electing people for public office and make you
the king of the USA. Please leave this little worthless place on the
internet that you despise so, we are not worthy of your presence.

I wonder, do you still live at home with your mommy like most of the
ham radio geeks?

so if its for pretty short range work i wont need an antenna? do i just
connect the two nodes of the circuit that would normally attach to an
antenna then?

thanks

jeff

Hmm, while I love my DWAs, I'm not sure I'd go that far.
They had a few issues that would keep them less than
optimal for 'service'. Although I have to admit I carried
a 15-24 when I did 'precious metals and gems'.

One thing, cylinder spacing. If it gets sloppy, you get
misfires on repeat fire. Gotta watch that. And they are
'clunky' to reload fast. Although I was almost as fast
as with my S&W 66.

Mike
